BY

S. H. BUTCHER

HON. D.LITT. OXFORD; HON. LITT.D. DUBLIN
HON. LL.D. GLASGOW AND EDINBURGH
LATE PROFESSOR OF GREEK IN THE UNIVERSITY OF EDINBURGH
FORMERLY FELLOW OF TRINITY COLLEGE, CAMBRIDGE
AND OF UNIVERSITY COLLEGE, OXFORD

MACMILLAN AND CO., LIMITED
ST. MARTIN'S STREET, LONDON

1911

First published under the title
"Harvard Lectures on Greek Subjects," 1904.

PREFACE

THESE Lectures—Public Lectures delivered at Harvard University in April 1904—owe their origin to a generous gift made to the University by Mr. Gardiner Martin Lane, of the Class of 1881; and will remain associated in my memory with the recollection of infinite kindness received during my visit to Cambridge and Boston.

The Lectures, here and there slightly expanded, are, in other respects, published almost in the form in which they were delivered. The hearers to whom they were originally addressed comprised not only classical scholars, but also

the general public ; and they are now offered to a similarly mixed body of readers.

The book may be regarded as forming a kind of companion volume to *Some Aspects of the Greek Genius* (third edition, Macmillan and Co. 1904). Under various lights I have attempted to bring out something of the originality of Greece. The contrast is at the outset drawn between Greece and two older civilisations :—that of Israel, dominated by a great religious idea, and that of Phœnicia, given over to the pursuit of material well-being (I. and II.). In the subsequent lectures two features of the Greek intellect come into special prominence. First, a Love of Knowledge, which not only seeks out the facts of nature and of man's life, but persistently asks their meaning ; and this belief in the interpretative power of mind, working on and transmuting all raw material of knowledge, is shown to

extend beyond the domain of philosophy or of science, and to give significance to Greek theories of history and Greek views on education (III.). Secondly, a Critical Faculty standing in singularly close relation to the Creative Faculty. Art and inspiration, logic and intuition, elsewhere so often disjoined, enter into perfect union in the constructive efforts of the Greek imagination. It is but one eminent example of that balance of contrasted qualities, that reconciliation of opposites, which meets us at every turn in the distinguished personalities of the Hellenic race, and which is too often thought of, in a merely negative way, as the avoidance of excess, rather than as the highest outcome of an intense and many-sided vitality (IV.). But the critical instinct, one of the primary endowments of the Greeks, operates also apart from the constructive power, and (chiefly from the time of Aristotle onwards)

tries to penetrate the secret of the literary art. Here we have no longer the same sureness of insight ;—indeed the lack of it is frequently startling. Nevertheless there remains a sufficient body of interesting—and even illuminating—Criticism, to enable us to see, through Greek eyes, some of those literary principles of enduring value which Greece has bequeathed (V. and VI.).

GREECE AND ISRAEL

TWO nations, Greece and Israel, stand out from all others in the history of the world, and form a striking contrast as representing divergent impulses and tendencies of human nature, different ideals of perfection. In this, however, they are alike, that each felt itself to be a peculiar people, marked off from the surrounding races by distinctions more ineffaceable than those of blood—by the possession of intellectual or religious truths which determined the bent and meaning of its history. That history, as it was gradually unfolded, became to each an unfailing source of inspiration. The records and famous deeds of the race were invested with ethical significance.

In interpreting them each people gained a deeper consciousness of its own ideal vocation. From the heritage of the past they drew fresh stores of spiritual energy. Exclusive indeed they both were, intensely national; between Greeks and Barbarians, between Israel and the Heathen there could be no intimacy, no union. For many centuries the work of the Hellenes and of Israel went forward at the same time, but in separate spheres, each nation unconscious of the other's existence. Had they crossed one another's path, they would have aroused mutual hatred and suspicion; the Jews would have been barbarians to the Greeks, the Greeks idolaters to the Jews. Yet this very spirit of exclusiveness was one of the conditions which enabled each to nurture and bring to maturity the life-giving germ which it bore within it. In process of time each people burst the narrow limits of its own nationality, and in dying to itself, lived to mankind. *Morientes vivimus* is the epitome of each history. The influence by which both Jews and Greeks have acted on all after ages is one which has survived the

outward forms of national existence ; it belongs to the mysterious forces of the spirit. Through humiliation and loss of independence they each entered on a career of world-wide empire, till at length the principles of Hellenism became those of civilisation itself, and the religion of Judaea that of civilised humanity.

The Jews were from the outset conscious of their separateness, of their peculiar mission. From the family to the tribe, from the tribe to the nation, they felt themselves to be destined for some high purpose, though the idea was deepened and expanded as their history advanced. With the Greeks it was otherwise. In the Homeric age Greeks and Barbarians did not yet stand sharply opposed ; and, though during that period and long afterwards many elements of foreign civilisations were slowly absorbed, yet in the process of absorption they were so transmuted that for the Hellenes the net result was a heightened sense of difference between themselves and the non-Hellenes. The first impulse, however, towards national unity came, as with the Jews, through religion.

The religious life of primitive Greece centred at Dodona in Epirus, the seat of the oracle of Zeus, of whose cult we catch a curious glimpse in the famous invocation of Achilles (*Il.* xvi. 233). Dodona retained its immemorial sanctity far into historical times ; but it never formed a meeting-point for the scattered families of the Hellenic race. At a very early date the Dodonaean cult gave place to the worship of Apollo, who made his abode on the Eastern coast of Greece, at Parnassus, with Delphi as his sanctuary. Zeus still remained the supreme god, and Apollo, the youngest of the Olympians, became his 'prophet,' his interpreter. The tribal cults are henceforth merged in a higher worship. A league of states representing the common sentiment of the Hellenes is associated with the Delphic shrine. Apollo here presides at the Theoxenia—the festival celebrating the friendship of the gods. In reconciling the local deities he stands as the symbol of Hellenic fraternity and union. The nobler energies of the race now obtain a religious consecration.

The Delphic religion was in its highest

intention an effort after spiritual freedom and enlightenment. In this respect it offers a remarkable counterpart to Hebrew prophecy. It asserts the binding claim of the moral law alike over states and individuals. It deepens the conception both of guilt and purification. As the Hebrew prophets were charged with guarding the spiritual heritage of Israel, so the Pythian Apollo fostered the ideal of Hellenic character in religion, morality, and art. In speaking of Delphic prophecy we must dismiss the vulgar notion of merely predicting future events or revealing secrets. This lower art of soothsaying was, no doubt, in great demand in Greece at all periods of her history. Tablets discovered in Epirus in 1877¹ give examples of the questions addressed by its rude votaries to the oracle of Dodona. A certain Agis asks about some lost property—mattresses and pillows—whether they may have been stolen by a stranger.² Another

¹ C. Carapanos, *Dodone et ses Ruines*.

² ἐπερωτεῖ Ἄγῆς Δία Νᾶον [καὶ Διώναν] ὑπὲρ τῶν στρωμάτων κ[αὶ τῶν προσ]κεφαλαίων, τὰ ἀπώλολ[εν] (? ἀπώλλωλεν), ἥ τῶν ἔξωθεν τις ἂν ἔκ[λεψεν].

inquires whether the god advises sheep-farming as an investment.¹ Even at Delphi some of the responses recorded are trivial enough. But the influence of Delphi must not be judged by such isolated utterances. The ethical and civilising purpose it served is apparent to every attentive reader of Greek history and literature. Apollo's chief office is not to declare the future ; nor is he concerned with minute ceremonial observances. He bears a personal message to the people ; he is the expounder of the divine will ; it is part of his function to maintain an ethical ideal and to quicken the national consciousness. The pious inquirer at his shrine approaches him in the confidence of glad companionship, and holds converse with him as with a living personality. The mind of the supreme god is declared not in dark signs through the voices of nature or through perplexing dreams, but by human utterance and in rhythmical speech. Apollo, the *προφήτης* of Zeus, has human *προφηται* of his own. But it is in accordance with the religion of Delphi to

¹ αἶ ἔστι αὐτοῖ προβατεύοντι ὤναιον καὶ ὠφέλιμον.

recognise not only a direct guidance from without, but also an inward revelation, telling of clear-felt duties and pointing to the god in the human breast. Apollo, speaking from the 'just-judging'¹ sanctuary, insists on inward motive, on purity of heart rather than on outward cleansing, on the spirit rather than on the letter of religion. He prefers the pious offering to the sumptuous sacrifice; he maintains the cause of the weak and the oppressed—of women, slaves, suppliants; he inculcates the duty of reverence for oaths. But he was also the familiar friend and counsellor of the nation. He took into his keeping the civic life of Greece. Under Delphic supervision the colonial system was organised, and missionaries of Greek culture were settled in every land. The express sanction of the Delphic oracle was sought for the founding of colonies, such as Byzantium, Syracuse, Cyrene. Apollo, moreover, was invested with all the gracious attributes of knowledge and artistic skill. He was the god of science, of art, of poetry; he presided

¹ Pind. *Pyth.* xi. 9.

at the games and festivals. Under his influence were developed the contrasted ideals that mark the type of Hellene and of Barbarian—the Hellene with his self-knowledge and self-control ; his love of ordered freedom ; his belief in reason and in the supremacy of the spirit over the senses : the Barbarian glorying in brute force, with blind impulses carrying him now towards anarchy, now towards slavery, unconscious of moral limitations, overstepping the bounds of law and reverence.

I am speaking of the Delphic worship on its ideal side, apart from the inherent unrealities and corruptions in which it was embedded. Yet, even from this point of view, there are striking differences as well as resemblances between Delphic and Jewish prophecy. The Delphic priestess, seized and subdued by an apparently divine possession, lifted out of herself in transport, presents a contrast to the Hebrew prophet whose reason and senses remain undisturbed under stress of inspiration. The familiar attitude, also, of the Greek towards his god is as unlike as can be to the distant and awful

communion which the Hebrew prophet holds with the Almighty. Nor again does the history of the Hebrew prophets afford any parallel to the defection of Delphi from the national cause. Even before the Persian wars Delphi had more than once yielded to the temptations which beset an ambitious priesthood. Now, at the supreme crisis of the nation's history, she could not rise above timid and temporising counsels. She was, it must be owned, forced to make a difficult choice. Her connexions over the barbarian world were widely extended. The gifts of the East flowed in on her. Phrygia and Lydia were among her clients. Her material interests forbade her to pronounce the clear word which would have put her at the head of Greek resistance to the barbarians. And so, the place, which from the eighth century onward she had held as the recognised conscience of Greece, she now forfeited and never wholly regained. In politics, the championship of the Panhellenic cause was assumed by Athens ; and outside the political sphere, it devolved more and more on poets and philosophers to

perpetuate the Delphic tradition by an effort to spiritualise the popular creed and reconcile it with a purer morality. The case of the Hebrew prophets is one of marked contrast. They never ceased to be the guardians of an ideal national sentiment. Not that they merely reflected prevalent opinion. If in a sense they were the spokesmen of the nation, they became so only by combating the will and denouncing the vices of their fellow-countrymen. Between prophets and people there was an unending conflict. We speak of the monotheism of the Jews ; yet they were ever prone to idolatry, being recalled from it only by warning and disasters. We speak of their spiritual faculty ; yet who more carnal than they ?—lovers of pleasure, lovers of ease, lovers of money. Again and again they were saved from themselves only by their inspired teachers, by the austere voice of prophecy.

There were moments when religion stood opposed—as one might think—to a larger patriotism ; and the prophets had to bear the hard reproach of appearing anti-national.

Jeremiah was cast into prison as a traitor. Two conflicting tendencies, as Renan has shown, were at work within Judaism : one, to mix with other nations and learn the ways of the world ; the other, to shun all contact with alien civilisations—art, commerce, foreign alliances being regarded as so many dangers which might detach the people from their true allegiance. The first policy—that of expansion—was the policy of the kings ; the second, the policy of the prophets. The attitude of the prophets towards outside movements and influences was one of extreme circumspection or distrust. But the narrower—we might be inclined to say the more illiberal view—was, after all, the truly national one. Once we grant that the peculiar mission of Israel was to guard the principle of monotheism, and that any premature attempt at expansion would have meant absorption into heathendom, it follows that the pursuit of secular aims and of a many-sided development would have been for the nation the abandonment of her high calling.

Delphi in her earlier and better days was

more happily placed in relation to outside currents of thought. Vividly conscious though she was of the antithesis between Greeks and Barbarians, no timid fears that Hellenism might be lost in barbarism checked her forward energies. Greece must not be kept out of the general movement of the world. Rather it was dimly felt that the world was one day to be hellenised. The idea that is openly expressed in the fourth century B.C. of a larger Hellenism resting not on racial but on spiritual affinities seems to have floated vaguely before the mind at an earlier date. Delphi was long able to pursue a policy of progress and expansion without endangering either patriotism or religion.

Here we strike on the fundamental difference between Hebrews and Greeks—the Hebrews preoccupied, dominated by a single idea, and that a religious one ; the Greeks moved by the impulse for manifold culture. Two distinct individualities stand out in clear relief. To the Hebrews it was committed to proclaim to mankind the one and supreme God, to keep alive his pure worship, to assert the inexorable moral

law in a corrupt and heathen world. For the Greeks the paramount end was the perfection of the whole nature, the unfolding of every power and capacity, the complete equipment of the man and of the citizen for secular existence. The Hebrews had no achievement to show in the purely secular sphere of thought and conduct. They had no art,—if we except music—no science, no philosophy, no organised political life, no civic activity, no public spirit. In regard to plastic representation, they were pure iconoclasts ; for idolatry was a danger near and menacing. The search for causes—the inspiring principle of the scientific spirit—was for them either an idle occupation of which man soon wearies, as in *Ecclesiastes*, or an encroachment on the rights of God. The discovery of a reign of law in nature, which to the Ionians of the sixth century B.C. seemed the highest function of the human intellect, was alien to the Hebrew mode of thought.

Poetry indeed they had, unique in its kind : the lyrical utterances of the Psalms, outpourings of religious emotion unsurpassed, or rather un-

approached, in depth and range of feeling ; that sublime drama, again, or dramatic lyric, the *Book of Job* ; the apocalyptic visions of the prophets, revealed in words such as those which Isaiah the son of Amos ‘saw.’ Yet if we except the idyll of the *Book of Ruth* and the *Song of Solomon*—a beautiful and human love-song, which stands in such curious isolation from the other contents of the volume with which it is bound up—Hebrew poetry is of a different order from that of our Western civilisation ; it is poetry lifted into another sphere and made one with religion. The epic, and the drama in its strict sense, are wanting. We have not the laughter as well as the tears of humanity ; no airy structures of the fancy ; none of the playful ironies of existence ; no half lights or subtle undertones ; none of the rich variety of poetry in its graceful and intermediate forms. The world which Hebrew poetry reproduces is not a second world recreated out of the elements of the actual, though separate from reality—a region into which we are transported by the power of imaginative sympathy. It is the actual world itself.

The two living realities, God and the Soul, are face to face, engaged in everlasting colloquy. We overhear voices of pleading and warning, of pathos and hope, of repentance and forgiveness. And as with the individual so with the nation. All the spiritual experiences of the race, as summed up in an unforgotten past, are expressed in language instinct with poetic emotion.

In Hebrew poetry there is a pervading sublimity which has no precise parallel in any other literature. To the Greek poet, 'Wonders are many and nothing is more wonderful than man': yet marvellous as are the achievements of man's art and skill, his daring courage, his civic inventiveness, all fall short of the moral sublimity he attains through suffering, by the endurance of god-sent calamity, and by an unconquerable will. In Hebrew poetry, lyrical and descriptive, the note of sublimity is of a different kind. It belongs to the domain of heaven. Man is in himself 'a thing of nought,' 'even as a dream when one awaketh'; feeble and perishable; vicissitude and decay are stamped on his terrestrial life. 'The earth shall reel to and fro

like a drunkard, and shall be removed like a cottage.' At the sight of the majestic order of the universe, still more in the contemplation of God's everlasting righteousness, his unsearchable greatness, there arises a sense of awe-struck exultation. 'The Lord is King, the earth may be glad thereof: yea the multitude of the isles may be glad thereof. Clouds and darkness are round about him: righteousness and judgment are the habitation of his seat.' 'The Lord sitteth above the water-flood: the Lord remaineth a King for ever.' Essentially sublime, too, are the descriptions which suggest the omnipotence of the divine word. 'And God said, Let there be light: and there was light.' 'For he spake and it was done: he commanded and it stood fast.' 'Where wast thou when I laid the foundations of the earth? declare, if thou hast understanding. . . . Or who laid the corner stone thereof, when the morning stars sang together, and all the sons of God shouted for joy? Or who shut up the sea with doors . . . and said, Hitherto shalt thou come, but no further; and here shall thy proud

waves be stayed?' He who 'commandeth the sun and it riseth not, and scaleth up the stars.'

Greek poetry in its more serious forms is almost as deeply penetrated with theology as is Hebrew poetry with religion. The Hebrew poets seldom dare to dwell upon those problems touching the moral government of the world which exercised a grave fascination over the imaginative mind of Greece. Yet at times some troubled reflections escape their lips, as in the *Psalms*, or in shorter outbursts of lyrical emotion. In one book, however, of the Bible the cry of humanity utters itself in tones of reasoned rebellion and with unique audacity. The *Book of Job* and the *Promethens* of Aeschylus may be placed side by side, as the two protests of the ancient world against divine oppression—the one the protest of monotheism, the other of polytheism. Let us glance for a moment at these two poems. They form a luminous comment on the contrasted spirit of the two nations.

The character of Zeus in the *Prometheus* exhibits every line and colour of tyranny as it

was understood by the Greeks. Zeus is the 'new lord,'¹ enforcing his will by relentless ministers, 'ruling by his own laws,'² 'keeping justice in his own hands,'³ 'a harsh monarch and irresponsible,'⁴ distrustful of his friends,⁵ malevolent towards his subjects, ungrateful to those who had done him service. Even his friends do not question the judgment of his foes. His character is thrown into yet darker shade by the appearance in the play of Io, in whose history is recorded one of the distinctive marks of the tyrant—a selfish and heartless love. The two sufferers, Io and Prometheus, meet by chance on the rocks of Scythia, the one the victim of the love of Zeus, the other of his hate; the one the very emblem of restless movement, the other of a chained captivity. In various details, moreover, the old legend is so modified as to place in strong relief the beneficent effects of Prometheus' revolt. A single point may be

⁵ *Ib.* 224-225.

mentioned. In Hesiod the theft of fire leads indirectly to all the evils that flesh inherits. Till then, under the rule of Cronus men were as gods enjoying all happiness—ὥστε θεοὶ δ' ἔζων. In the train of civilisation came all manner of woes and sicknesses. It was as it were the Fall of man. The age of ignorance was the age of gold. In Aeschylus, by the act of Prometheus, the human race so far from forfeiting a state of primitive well-being, rises for the first time out of a feeble, timorous existence; it subdues to its own use the forces of nature; 'blind hopes' are planted in man's heart—the pledge of future progress. Nor did Prometheus, as some would have it, by an act of impatient philanthropy forestall the wise purposes of Zeus. The design of Zeus was to sweep away the race. Prometheus, therefore, rescued man not merely from a life of brute stagnation, but from death itself.

Many critics have maintained that in ranging ourselves on the side of Prometheus against Zeus we are interpreting the drama in a modern sense and in a manner alien to the thought of

Aeschylus. But the character of the benefactor is drawn in outlines no less firm than that of the oppressor of mankind ; and the words in which Prometheus sums up his own history accord with all the facts of the dramatic presentation : ‘ In chains ye see me, an ill-fated god, the foe of Zeus, *because I loved mortals overmuch*’ (διὰ τὴν λίαν φιλότητα βροτῶν).¹ Prometheus embodies the Greek type of moral heroism as truly as Zeus does that of tyranny. The hero of Greek poetry, the hero as Athens loved to portray him, is not only eminent for courage or indomitable in his will-power ; he is also generous in sympathy ; pitiful to the weak ; moved by a chivalrous, a romantic impulse to redress the wrongs of the world. Prometheus unites the two sides of the heroic character. He is tender as well as magnanimous. ‘ Out of the strong came forth sweetness.’ Towards the Ocean Nymphs he shows a delicate and gentle courtesy. The tormented and confiding Io pours her woe into his ear ; and the sublime sorrow of the god finds room within it for the

¹ *Prom.* 119-122.

plaintive outpourings of the mortal. And, as 'love overmuch' has been his fault, so all creation, animate and inanimate, mourns in sympathy with him in the splendid chorus, lines 397-435.

If this, then, is the true reading of the play, it presents the struggle between two wills, each equally unyielding, the one strong in the consciousness of physical power, the other in moral greatness and wisdom. That Aeschylus should have placed Zeus in such a light before an Athenian audience, has seemed to many readers an impiety so daring as to be impossible. But let us not lose sight of the far-off period at which the action is imaginatively laid. The Aeschylean heroes are often men in whose veins the blood of gods still runs—

κοῦ'πω σφιν ἐξίτηλον αἶμα δαιμονων.¹

In this play they are not godlike men but actual gods. We are carried back to an age anterior even to the action of the *Iliad*. One dynasty of gods has overthrown another, but not without the rough and lawless deeds which

¹ Aesch. Fr. 146.

accompany such a change. The sovereignty of Zeus is as yet insecure. The 'new lord' of Olympus has had a beginning ; he will also have an end unless he mends his ways of governing. The shadow of dispossession hangs over him. He is subject to a mysterious power stronger than himself ; between his will and the supreme Fate there is still a discord. His omnipotence is limited by this control. So far is he from being omniscient that he is ignorant of the secret on which the permanence of his throne depends. His reign is stained by caprice and crime. This is surely not the same Zeus that is elsewhere called in Aeschylus, 'king of kings,' 'most blessed of the blest,' 'all-seeing,' 'who rewards all men according to their works,' 'who guides men in the path of wisdom.' Rather, he represents a passing epoch ; he is the ruler of the visible order of things in an era when might and right are not yet reconciled. The play itself looks forward to a future which shall adjust the disorders of the present. We cannot here discuss the difficult question of the sequel ; but once we admit that within the

mythological framework of the Greek religion the supreme god might be exhibited as subject to a law of development, and as growing from lawlessness into righteousness; that even for Zeus Time could be the great Teacher, in the full significance of Prometheus' words—

ἀλλ' ἐκδιδάσκει πάνθ' ὁ γηράσκων χρόνος¹—

then, many of the elements for the future reconciliation are ready to hand. As Aeschylus elsewhere sets the Eumenides against Apollo, the old against the new, so in the *Prometheus* does he set Zeus against the Titan, the new against the old. In each case the strife must be resolved in a final harmony. In the *Prometheus*, the sovereignty of the supreme god becomes assured only when Wisdom and Power shall have entered into indissoluble union. Wisdom without Power is ineffectual: Power without Wisdom, though it may last for a time, cannot be enthroned as immortal.² This is probably

¹ *Prom.* 981.

² This view of the *Prometheus*, which I have placed before my pupils for more than twenty years, is, I find, supported by the authority of so eminent a scholar as Dissen, in a letter to Welcker printed in Welcker's *Trilogie* 1824; see an interesting

the explanation of what at first sight seems the most daring audacity ever enacted on the Greek stage. The mind of Aeschylus loved to move among the dim forms of the elder world. Before his vision gods in their succession came and went. Viewed in the immense perspective of the past the sway of these gods was almost as ephemeral as that of mortals. With them too the higher displaced the lower. Their story, like that of humanity, was one of moral growth. There was a law of evolution, a process of becoming, from which even deity was not exempt. To Aeschylus the dramatist no theme could well have been more congenial than that of the *Prometheus*, giving scope, as it did, for a conflict of will-power on a scale of such colossal grandeur. But Aeschylus the profoundly religious theologian would surely have shrunk from a dramatic situation so perilous to piety, were it not that the fluid and ever-shifting forms of Greek mythology

article in the *Classical Review*, March 1904, by Janet Case. Also it has been ably and independently put forward by Professor Lewis Campbell in his introduction to the *Prometheus Bound* (1890).

lent themselves to the utmost freedom of poetic handling.

In passing to the *Book of Job*, we observe some points of detailed resemblance in the setting of the two poems. Just as Prometheus at the outset maintains silence—one of those eloquent Aeschylean silences—so too Job held his peace ‘seven days and seven nights’; and then, like Prometheus, reviews his life, proudly proclaiming his own innocence. His friends seek to convince him that he has done wrong. They cannot extort from him the admission. As compared with other men he knows himself to be guiltless. And as the chief actors use similar language about themselves, the language they use about the deity is also in some degree similar. In Prometheus it is an expression of proud defiance towards one whom he regards as a tyrant and an upstart, and whose future overthrow he calmly contemplates. In Job, the voice of accusation seems to touch more nearly on blasphemy, as addressed to a God who was not only supreme, but in the highest sense righteous. It is, however, this very

perfection of power and goodness which adds a sting to the apparent injustice. The feeling is one of conflict and strange perplexity. Almost in the same breath with passionate remonstrance and complaint there come accents of trust and utter self-surrender. It is the sort of irony which belongs to love. In form an accusation it is in reality an expression of belief in the very attributes that are denied, an appeal to the deity to remove the inconsistencies which seem to darken his character, to explain the flaws in his own work, to reconcile his goodness and his power. Hence the sudden transitions and alternations of mood. Now God is a hard adversary ; for man to plead against him is despair : yet plead he will, though it should be at the cost of his life (ch. ix. 20-21). 'Thou knowest that I am not wicked' (ch. x. 7); 'is it good unto thee that thou shouldest oppress?' (ch. x. 3). In his anguish God and his enemies seem ranged on one side (ch. xvi. 7-16). But again by a sudden revulsion of feeling he turns to God, whom he invokes to be judge in his own cause ; he makes him

his arbiter even while he is his adversary: 'Even now, behold, my witness is in heaven, and he that voucheth for me is on high' (ch. xvi. 19 Rev. Vers.). He complains that God hides from him, that he is not in the East nor in the West. 'Oh that I knew where I might find him! that I might come even to his seat! I would order my cause before him.' 'When he hath tried me, I shall come forth as gold' (ch. xxiii. 1-10). 'Now I have ordered my cause; I know that I shall be justified' (ch. xiii. 18). The sense of ill treatment and despair is heightened in Job's case by a special circumstance. Whereas Prometheus is conscious that he is an immortal and that his victory in the future is assured, Job has no clear belief in immortality. At the most, it stands out dimly as a hope. The old patriarchal theory of life was in need of no hereafter. The good man was always rewarded, the bad man punished. But the theory was giving way; it was discredited by experience; and with the blank so created the whole scheme of things fell into confusion. For commonplace minds, such as Job's friends,

the old formulas still sufficed. But to those who looked steadily on life the discord between merit and reward was apparent. How account for the divine misrule? There are moments when Job hints, as it would seem, at a life hereafter as the key to these moral problems; but such rare glimpses are soon lost in deeper darkness.

The endings of the two poems are significantly different. The decisive contrast lies in the characters of the two deities whose justice has been impugned. The God who is the antagonist of Prometheus has power, but he has not goodness: the God who is the antagonist of Job is perfect in goodness as in power. And so Prometheus, strong in conscious right and in foreknowledge of the future, remains unshaken by persuasions and threats. At the close of the drama, from out of elemental ruin—earthquake and lightning and tempest—he utters his last defiant words: ‘Thou seest what unjust things I suffer.’ Job, who in all his troubled questionings has never lost his central trust in the God whom he has upbraided, ends by a retraction:

‘I know that thou canst do all things, and that no purpose of thine can be restrained . . . I have uttered that which I understood not, things too wonderful for me, which I knew not’ (ch. xlii. 2, 3 Rev. Vers.). The infinite mysteries of creation, as they are flashed before him in a series of sublime descriptions (ch. xxxviii.-xli.), have subdued the heart as well as the intellect. Love, dormant throughout, is now fully awakened. Yet even for Job the bewildering problem remained unsolved. Jehovah’s answer had merely shown him Nature’s immensity and the nothingness of Man.

While philosophy had for the Jews no meaning, history had a deeper significance than it bore to any other people. It was the chief factor in their national unity, the source from which they drew ethical and spiritual enlightenment. Thither they turned as to living oracles inscribed with the finger of the Almighty. To history they appealed as the supreme tribunal of God’s justice. Nor was the history of their past merely a possession of their own; it was a treasure they held in trust for the human race.

The story of the Jews was part and parcel of the 'book of the generations of man.' Before the eyes of the prophets history as a whole emerged as an orderly plan, conceived in the counsels of the eternal, slowly unfolding itself in the rise and fall of empires, in startling catastrophes, in sharp and swift punishments which smite the innocent with the guilty ; but not less in the normal processes of a nation's life, its growth, its decay, its obedience, its rebellion, in the seed-time and harvest of the moral world. The great monarchies, Egypt, Assyria, Babylonia, Persia, pass across the scene. Their fortunes cross and interlock with those of the chosen race. Israel is the pivot on which their destiny turns. In their pride they boast of victories not their own. The Assyrian says 'By the strength of my hand I have done it, and by my wisdom' ; but they are each an instrument, though they know it not, in the hands of the Almighty, by which he chastises his forgetful people or re-admits them to his favour. History, in a word, is the drama in which God himself is the protagonist, vindicating

his justice and moral government on the stage of the visible world.

Never has any people been so conscious of its own spiritual calling as the Jews ; none has had so profound an intuition of the future. They pondered their long preparation and equipment for their office, its unique design, their repeated lapses, their baffled hopes, the promises postponed. The outward trappings of national existence fell away. All that constitutes history in the eyes of secular nations—war and politics, the deeds of kings, heroic struggles for independence—these things occupied an ever lessening space in their annals ; their only life was the indestructible life of the spirit. They were content to suffer and to wait. They had all the tenacity of hope. Disencumbered of material greatness, they enlisted themselves on the side of purely spiritual forces. It was the prerogative of their race to be ‘an ensign to the nations,’ to bear the banner of the true God.

The only Greek historian whose philosophy of history recalls in some chief features that of

the Jewish Scriptures is Herodotus. To him the course of the world, its incidents great and small, are under divine governance. The same 'forethought'¹ or providence which is at work in maintaining a just balance of forces within the animal kingdom, likewise presides over the destiny of empires. This supreme power reveals its will through various modes of utterance—through oracular voices, through signs, through disturbances in the physical order of nature. It humiliates human pride, it lures on insolence to its ruin, it pursues the guilty through generations. And as in Jewish history the fortunes of Israel intermingle with the secular currents of universal history, so in Herodotus Greek history is read in its larger and world-wide relations. The great military monarchies pass before our eyes in a series of apparent digressions; but the main theme is never forgotten; the tragic action moves onward through retarding incidents, till at last the divine retribution hastens towards its goal, and all the pride of the East, gathered into one under Persia, flings

¹ *προνοή*, Herod. iii. 108.

itself in preordained ruin on the free land of Hellas.

The problems of politics never exercised the mind of Israel. No questions arose about royalty, aristocracy, or democracy, as entitled to put forward their several claims; there was no thought of tempering the evils of unmixed or extreme constitutions, or of harmonising conflicting ideals, such as at an early period seized upon the reflective spirit of Greece. The Jewish wars of liberation were waged not for political, but for religious freedom. It has been remarked by Renan that the Jews accepted with easy acquiescence any political régime which, like that of Persia, was fairly tolerant of their religious worship. On the other hand, the mind of Israel, ill-fitted indeed to found a secular state, or to adjust the various functions of government, went out in aspiration towards the citizenship of a larger country. The oneness of God carried with it, as an implicit consequence, the oneness of humanity. Even the law, though in the first instance a covenant with a single people, and in spite of its minor

enactments and disciplinary rules, itself became a unifying power. Its moral precepts, flowing from one God as the sole source of law, had a universal and binding force. And if the demands of the law knew no restriction of race, so its privileges were open to all. No ancient constitution accorded to strangers such a position as they enjoyed under the Mosaic code. At Athens resident aliens received a more humane and favoured treatment than in any other state in Greece. Still, even there, they had no legal or civic status; access to the courts was secured to them only through the service of a patron; and though this measure of recognition may be put down in part to Attic *φιλανθρωπία* or kindness, the direct motive undoubtedly was a commercial one. With the Jews the rights of the alien are placed on a clear religious basis—the unity of God involving the brotherhood of man. ‘Ye shall have one manner of law, as well for the stranger, as for one of your own country: for I am the Lord your God’ (*Lev.* xxiv. 22). The declaration that ‘God loveth the stranger’ (*Deut.* x. 18)

involved far-reaching consequences which cannot be extracted from the kindly religious sentiment expressed in the Homeric words, 'the stranger and the beggar are from Zeus.' The lessons, moreover, of suffering and the memory of the house of bondage are brought in to reinforce the ethical duty. 'Thou shalt love him as thyself; for ye were strangers in the land of Egypt' (*Lev.* xix. 34). At the heart of Judaism beneath its hard and often repelling exclusiveness the idea of universal humanity was being matured. With the preaching of the prophets in the eighth century Judaism became essentially a social religion, a religion of humanity. In the last days of the kingdom of Judah the feeling of compassion for the weak, of sympathy for the poor and the oppressed, takes a deeper and tenderer tone. The sense of the inequalities of life strike in upon the mind with a new and piercing force. 'To undo the heavy burdens and let the oppressed go free'; 'to open the eyes of the blind'; 'to satisfy the afflicted soul'; to deliver suffering humanity from the darkness of the prison-house—this

became the absorbing passion of the Hebrew. Such a moral enthusiasm could recognise no restrictions of age or country. In a regenerate society, and under the law of the spiritual kingdom foreshadowed by the prophets, all barriers must be broken down. The families of the earth, already united by a common origin, are henceforth to be united by a common hope. 'For my house shall be called an house of prayer for all people.'

Greek thinkers no less than Hebrew prophets figure to their imagination an ideal society. In Plato's *Republic* justice finds an earthly home. The outward fabric and framework of the city are essentially of the Hellenic type. In its laws and bye-laws, as distinct from the moral principles on which it is based, it is subject to the usual Hellenic limitations—with, indeed, one notable exception, that war between Hellenes is forbidden, and that one Hellenic state may not enslave another. But the distinction between Greeks and barbarians is retained; and within the city sharp lines of demarcation are drawn. There are full citizens, for the sake of

whose complete training in virtue and intellect the state exists; the governing power resides in their hands; but beyond these there is a great disinherited class, of traders and artisans who are not true members but only parts of the community, and of slaves who are mere instruments for carrying out their masters' will.

So far Plato does not rise above his own age and country. But his real concern is not with the external organisation of the state. The secret he desires to discover is the true method of training intellect and character:—how human nature may be moulded into the form of perfect goodness; how the highest natural endowments, the love of beauty, which reveals the world of art and literature, and the love of truth, which makes man one with himself and one with his fellow-men, may be fostered and combined. Plato is under no illusions as to any facile mode of reforming society. The high hopes of early youth had been shattered. The lesson of Greek history was to him full of despair. Selfishness and corruption, the inordinate assertion of the individual without regard to the welfare of the

whole—this was what confronted him in civic life. The thinking man who shrinks from engaging in the turmoil of faction may well be tempted to ‘hold his peace and do his own business,’ ‘content if only he can live his own life and be pure from evil or unrighteousness, and depart in peace and good will with bright hopes.’¹

No merely external changes could restore a society so deeply corrupt. Until wisdom and beneficence, knowledge and power—the power of government combined with true philosophic insight—were united in the same persons, mankind could have no release from evil. We are reminded of the union foreshadowed in the *Prometheus* of power and goodness in the government of Olympus. Plato is bent on arriving at an intellectual apprehension of the moral forces which underlie all political and social improvement. On the one hand he traces the ascent of the soul, of the nobler philosophic nature, from the darkness to the light, and studies the law of its upward progress ; on the

¹ *Rep.* vi. 496 D-E.

other hand he gives a penetrating psychological analysis of the successive stages of moral decline both in states and individuals. The fervour with which he describes the power of philosophy to raise and transform life, to bring thought and action into harmony, has the glow of religious emotion. His words fall little short of Hebrew prophecy in their intensity. But let us not mistake his drift and purpose. He has not the directly operative aim of the social reformer. He is not seeking to ameliorate the outward conditions of existence, or to raise the lot of the poor and struggling. He is well aware that the earthly state, in which he seeks to embody his highest conception of justice or human goodness, is an ideal, and that the pattern of his city is 'laid up in the heavens.' The regeneration of society stands out before him as a far-off hope. He strains his eyes after the heavenly vision, but it is the vision of a philosopher not a prophet, of one who is 'the spectator of all time and all being'; for whom the laws of truth and conduct are the great primary reality, towards which the mind must

strive in far-reaching aspiration, though no era of righteousness is as yet dawning on the world. Yet he insists that the ideal is none the worse for being merely an ideal. His belief never wavers in the sovereignty of reason, in the affinity of the human soul to the divine, and in the vision of the Good as the illuminating power of human life. It is the business of the philosopher to open the eyes and to direct the groping steps of the multitude. 'Could they see the philosopher as he is, they would certainly accept him for their guide.'

The vision of the prophets differed from the vision even of the greatest of the philosophers in the ever increasing clearness with which its reality was apprehended. The spirit of hope, so distinctive of the Jewish people, the invincible optimism which survived every disappointment, sustained them to the last. They laid hold of the future as their own possession, with a confidence unapproached by any other nation, unless we may find a distant parallel in the exhilaration of tone with which the Roman poets forecast the imperial greatness of Rome. To the Greeks

the future is dim and inscrutable; poets and prose writers repeat with many variations the sad refrain, 'uncertain is the future'¹—*ἄδελον τὸ μέλλον*. 'Forecasts of the future,' says Pindar, 'have been doomed to blindness.'¹ The future is the secret belonging to the gods, and it were presumptuous for man to seek to penetrate it. His duty is to seize the present with its limitless possibilities, and to use it with that rational energy and forethought which are born of an enlightened experience. It is a temper of mind wholly unlike that of the Jew, the loss of whose earthly country seemed to point him forward with a more victorious certitude to 'the city which hath foundations,' to the Heavenly Jerusalem.

'He hath set Eternity in their heart':² so might we sum up the spirit of Israel. But the Jewish ideal simplified life by leaving half of it untouched. It remained for Greece to make the earth a home, ordered and well equipped for

¹ Pind. *OL.* xii. ad init. *τῶν δὲ μελλόντων τετύφλωνται φραδαί.* (Trans. Jebb.)

² *Ecclesiastes* iii. 11 (margin). But the rendering is doubtful.

the race, if not indeed for the individual. Greece supplied the lacking elements—art, science, secular poetry, philosophy, political life, social intercourse. The matchless force of the Greek mind and its success in so many fields of human activity is, as we shall see, due above all to this, that it was able harmoniously to combine diverse and even opposite qualities. Hebraism and Hellenism stand out distinct, the one in all the intensity of its religious life, the other in the wealth and diversity of its secular gifts and graces.

Thus the sharp contrasts of the sculptor's plan
Showed the two primal paths our race has trod ;—
Hellas the nurse of man complete as man,
Judaea pregnant with the living God.

I do not ask you to estimate the value of these two factors, one against the other, to compare things so incommensurable. Each people is at once the historical counterpart and the supplement of the other. Each element, by contributing its own portion to our common Christianity, has added to the inalienable treasure of the world. For the present, however, our immediate

concern is with Greece. Within these walls the Hellenes are, I imagine, a small and peculiar people; though not, I hope, a dwindling minority. Outside are the larger ranks of the non-Hellenes—I hardly like to call them by their Greek title, the Barbarians. But the Hellenes, like the Hebrews, have always prevailed by the few, not by the many. Nor was it till ancient Hellas ceased to be an independent nation that it became one of the moving forces of the world's history. With the Greeks, as with the Hebrews, the days of their abasement have once and again preceded their greatest triumphs; the moment of apparent overthrow has been the starting-point for fresh spiritual or intellectual conquest. That is a cheering omen when we are asked to believe that the study of Greek is now an anachronism, and out of keeping with our progressive civilisation.

II

GREECE AND PHOENICIA

IN this lecture I propose to place side by side two contrasted civilisations—that of Phoenicia and that of Greece. The history of Phoenicia centres mainly round the names of the great commercial cities of Sidon, Tyre, and at a later period Carthage. I need not remind you that the Phoenicians were the pioneers of civilisation in the Mediterranean, and did the carrying trade of the ancient world. They perfected the industrial discoveries of earlier nations, exhibiting singular resource and ingenuity in developing such arts as pottery, glass-making, gold-working, and the like. But they also started new branches of industry of their own, and, in particular, by the discovery of the purple dye, established an immense trade in textile fabrics.

Fearless and patient navigators and explorers, they felt their way along the stepping-stones of the Greek archipelago till they pushed to the furthest limits of the known world. Their settlements extended over the whole Aegean, along the African coast and the western Mediterranean, and thence to the Atlantic; they traded from the coasts of Britain to those of North-West India. Phoenicia was the 'mart of nations'; 'whose merchants' were 'princes, whose traffickers' were 'the honourable of the earth.'¹ In the earliest glimpse we get of them we see their mariners touching at every shore, exchanging their manufactured articles for the natural products of the country, and at each point shipping some new cargo for their homeward voyage. Overtaken by winter on a distant coast, they would quietly wait there till the return of spring enabled them to sail on calmer seas. They opened up trade routes for overland as well as maritime commerce. The Phoenician merchant would penetrate into African deserts or exile himself

¹ *Isaiah* xxiii. 2, 8.

for years in the bazaars of Nineveh or Babylon to extend his markets. Starting from the coast of Palestine, a mere handful of men, this people created a world-wide commerce, maintained themselves in scattered groups among unfriendly populations, holding the very outposts of civilisation, and laid the foundation of a great colonial dominion. About 600 B.C. Tyrian sailors, despatched on a mission by Pharaoh Necho of Egypt, are said to have doubled the Cape of Good Hope and circumnavigated Africa.

‘Those English of antiquity,’ says a French writer;—but, as one may hope, with only partial truth in the description; for the Phoenicians amassed indeed wealth untold, and secured a monopoly in most of the markets of the world; but they drove hard bargains on the strength of their monopoly; they eked out their gains by kidnapping and trafficking in slaves. Wherever they appeared they were dreaded and disliked, though, for business purposes, they were indispensable. Unpleasant names are already applied to them in the Homeric poems. This

was, perhaps, partly due to the instinctive antipathy which has always existed between the Semitic and Aryan races. In part it may be traced to some inevitable misunderstanding between people who refuse to learn one another's language. But, making all allowance for these facts, and speaking without any anti-Semitic prejudice, we must own that the Phoenicians were an inhuman and unlovable race. They were animated by one passion, the greed of gain. Wealth was with them the end of life, and not the means. Theirs was, in Bacon's phrase, 'the sabbathless pursuit of fortune.' They had no larger horizons, no hopes beyond material advancement. Every artifice of concealment was employed by them to maintain their monopoly. With jealous exclusiveness they guarded the secret of their geographical discoveries, of their trade routes, of the winds and currents. By inventing fabulous horrors they sought to deter rivals from following in their track, and at times committed acts of murderous cruelty upon those whose indiscreet curiosity impelled them to pursue the quest.

To the past and the future they were alike indifferent. Among the articles of their export trade we may reckon the alphabet, through which they conveyed to Greece the art of writing, though they themselves never really learnt to write. Enough for them if they could draw up their tariffs and keep their accounts. Even of their own history they have left no records; and it is to the research of the Greeks that we are almost wholly indebted for such fragments of information as we possess. Literature they had none. Their art was merely an imitation or reminiscence of the art of others. The sense of political unity, again, was wanting; for Phoenicia was not a country or a continuous territory, but a series of ports. Their municipal life was not without the vigour which is often inspired by commercial activity; and, on occasion, too, Phoenician towns displayed heroic qualities in defending their independence. But, speaking roughly, we may say that civic discipline and loyalty were but feebly felt; even the great colony of Carthage suffered the battles of the State to be

fought mainly by mercenaries. In the absence of any high ideal of personal or national welfare the individual was crushed in the onward movement of material civilisation.

Let us turn now to Greece. The Greeks, also, were born sailors and traders, who from the dawn of history looked upon the sea as their natural highway, and explored its paths in a spirit in which the love of science and the love of adventure were equally blended. To them might be applied the name, *'Λειναῦται*,¹ which was given to a party of shipowners at Miletus who transacted their business on board ship. They too were always afloat—their home was on the sea. Like the Phoenicians, they were shrewd men of business, keen in the pursuit of commerce, eager to make money. From the Phoenicians they learned all the arts and handicrafts; by degrees they wrested from them the secrets of their trade routes, and equipped themselves with all the instruments of wealth and civilisation which their jealous teachers sought to retain in their own hands. But with

¹ Plutarch ii. 298 c.

the Greeks the love of knowledge was stronger than any instinct of monopoly ; the love of knowledge carried with it the desire to impart it, and in giving to others they received again their own with usury. No people was ever less detached from the practical affairs of life, less insensible to outward utility ; yet they regarded prosperity as a means, never as an end. The unquiet spirit of gain did not take possession of their souls. Shrewd traders and merchants, they were yet idealists. They did not lose sight of the higher and distinctively human aims which give life its significance. They had a standard of measure, a faculty of distinguishing values ; the several elements of national welfare fell each into its proper place and order. The Greek states did not, it is true, all in equal measure grasp the principle of the subordination of the lower to the higher aim. In Corinth and Aegina, where the Semitic instinct for trade was dominant, the distinction between the material means and the moral or intellectual ends was not apprehended with the same sureness or so decisively translated into

action as at Athens. Still the fact remains that Greece was aware of the ideal ends of life ; Phoenicia was not. And so political science, ignored by the Phoenicians, became to the Greeks the highest of the practical sciences, the science of man, not as a trader, but as a man, fulfilling his function as a member of the social organism, and living with all the fulness of life. Aristotle speaks of the State as existing not 'for the sake of mere life, but of the noble life' ; and, though the formula is his own and bears a philosophic stamp, he was but following the guidance of educated thought and deepening a popular conviction. Granted that certain external conditions must be satisfied and material wants supplied, the true aim of civic existence still lies beyond. The State was felt to be no mere mechanism for the getting of wealth ; its function was to build up character and intellect, to unfold the powers of the heart as well as of the head, to provide free scope for the exercise of human personality in its manifold activities. An Athenian could have said with Burke : 'The State is a partner-

ship in all science, in all art, in every virtue, and in all perfection.' The Greek orators are animated by the same conception. Demosthenes never wearies of insisting on the moral basis of national greatness. Wealth, population, armies, fleets, all the material elements of strength, if disjoined from the nobler sources of civic inspiration, become 'useless, ineffectual unavailing.'¹

Phoenicia remains a lasting witness to the instability of power resting on a purely commercial basis and unsustained by any lofty or aspiring aims. No more striking contrast can be drawn than that between Greek and Phoenician colonisation. From the Phoenicians the Greeks learnt all the rudiments of the colonising art. But the Phoenician colonies, scattered over the Mediterranean shores, were as a rule little more than trading stations and factories planted along the great international routes; paying over, in some cases, to the mother city a portion of their commercial revenues, but owning no real allegiance, and not

¹ *Phil.* iii. 40 ἀχρηστα, ἄπρακτα, ἀνόνητα.

infrequently detached in sentiment. Nor did they show much power of self-government or any aptitude for entering into political union with others. To keep on good terms with the native populations on whose land they had settled, and to turn to profitable use the resources of the neighbouring tribes, was their chief endeavour. Carthage, indeed, the greatest of Phoenician colonies, displayed a magnificent and conquering energy ; but her projects of territorial ambition in Sicily, Sardinia, and Spain were precisely the occasion of her downfall.

The influence of Greater Greece is the determining fact in the history of the Hellenic people. Already in the sixth century B.C. the coasts and islands were studded with Greek towns from the Crimea to North Africa, from the regions of the Caucasus to Lower Italy, to Sicily, and even to Gaul. In the Macedonian period the chain of Greek cities extended to the Indus. Plato might speak of the sea as 'a bitter and brackish neighbour,'¹ a pleasant thing enough

¹ *Lausus* iv. 705 A ἀλμυρὸν καὶ πικρὸν γειτόνημα.

to have near you, but dangerous, and likely to bring in other strange products besides foreign merchandise. Nature, however, had marked out a maritime destiny for the Hellenes, and their colonial activity was the highest political achievement of the race. Different motives led the several states to send out colonies. Greece was a poor country—*πενίη ἀεί κοτε σύντροφός ἐστι*:¹—the growth of population outstripped the means of existence, and a foreign market was necessary to supplement the food supply and to furnish the material for native industries. But though actual need was perhaps the most frequent of the impelling causes of emigration, the highest instincts of the race sought other satisfaction in the colonising energy. Each founding of a city was a missionary enterprise. The emigrants carried with them the Apolline worship as the symbol of their spiritual unity; and, as we expressly read in regard to the founding of Naxos (735 B.C.)—the earliest of the Greek colonies in Sicily—the first act on touching the new shore was to erect an altar to Apollo

¹ Herod. vii. 102.

Archegetes.¹ The jealousies which were so rife in the narrow cantons of Greece were softened and sometimes forgotten in absence from home. The sense of Hellenic kinship was deepened and clarified. The Hellenes became aware of themselves as children of one family, however widely dispersed ; guardians of a common heritage which they were bound to protect against surrounding barbarism ; they listened to one Homer, they were nurtured on the same heroic legends ; on the same days they sacrificed to the same gods as their kinsfolk in the mother cities ; they lived under customs and institutions similar in spirit to the old.

Great diversity of aim and method prevailed in the colonising states. Corinth, the Venice of antiquity, pursued a commercial policy, and that policy rested on a colonial basis. Athens, entering much later on the field of colonial expansion, kept larger political and social ends in view. Her colonial empire, growing out of a religious federal union, owed its final and distinctive form to the part the city played in repelling

¹ Thucyd. vii. 3. 1.

the common danger which menaced Greece during the Persian wars. Even into the work of colonisation Athens sought to introduce a large and comprehensive spirit. A salient example occurs in the history of Magna Graecia, the home of so many novel and interesting experiments in social organisation. After the destruction of Sybaris, the new city (henceforth named Thurii) was restored under the guidance of Pericles, who desired to make it a Panhellenic community: from the outset it comprised not Athenians only but Arcadians, Eleans, and Boeotians. But widely as the states of Greece differed as colonising agencies, Hellenic colonisation, viewed generally, had one notable characteristic. Fitting in with the spirit of adventure and the disinterested curiosity of a restless and daring intellect, it carried men into the heart of every science. With the enlargement of the physical horizon new intellectual needs sprang up. The art of navigation demanded a closer study of astronomy and mathematics. The opening up of unknown lands, the importation of unfamiliar products,

the acquaintance gained with alien civilisations, whetted the desire for anthropological and historical research. We can observe the fascinating influence of geographical discoveries on the imagination of a poet such as Aeschylus. We are reminded of the effect of similar explorations on our own Elizabethan age. Indeed, the versatile colonial intellect of Greece, with its many-sided and, as it might seem, incompatible activities, produced a type of character which it is not too fanciful to compare with so romantic a personality as that of Sir Walter Raleigh, who was 'poet, historian, chemist, soldier, philosopher, courtier.'

The intellectual movement of the Greek world during the sixth century, and down to about the middle of the fifth century, radiates from Greater Greece. The philosophic intellect of Ionia led the way. All the early philosophers are Ionians by birth—Thales, Anaximander, Anaximenes, Anaxagoras, Pythagoras, Xenophanes, Heraclitus ; and of these the first three belong to one city Miletus. That same Miletus, which from the eighth century onwards sent forth

intrepid mariners, who penetrated to the remotest corners of the Euxine, planting some eighty settlements along the 'inhospitable' shores, also made fearless excursions into the domain of physical science, and gave to western Europe its first speculative impulse. In philosophy, the colonies of Southern Italy and Sicily followed the Ionian lead. In poetry, the earliest outburst of inspired song after Homer came from the island of Lesbos. Sicily gave birth to comedy, to dramatic dialogue, to rhetoric. The smaller islands contributed their share. Ceos produced the great Simonides; Samos, Pythagoras; Cos, Hippocrates, the father of medicine; a century later Crete gave to the world the Cynic Diogenes; and Melos, the 'atheist' Diagoras. Withdraw from Greece the colonies of her own blood, and you rob her of some of her greatest names; not only those just mentioned, but also Terpander, Archilochus, Mimnermus, Arion, Alcaeus, Sappho, Stesichorus, Anacreon, Ibycus, Bacchylides, Epicharmus, Empedocles, Herodotus, Hellanicus, Gorgias—I need not complete the list.

In the colonies again the most diverse political experiments were tried. The old forms of constitution proved to be too rigid for the new countries. Difficult problems presented themselves and pressed for practical solution. All the adaptive powers of the race, their rich and flexible intelligence, their *εὐτραπεία*, were called into play. Rival centres of industry or culture each acquired a distinctive character. The literature, the art, the mode of thought of the several colonies took their own local colouring. The marvel is that at a distance from home, a mere handful of strangers, they were not merged in the prevailing barbarism; that they did not 'forget their language, forget their poets, and their gods.'¹ As it was, they not only maintained their Hellenism despite all diversity of developments, but enriched the common stock by a ceaseless output of ideas. The sacred fire taken from the hearth of the metropolis city, they kept alive, and from it kindled new and illuminating thoughts which they transmitted to the land of their origin.

¹ Perrot, *Histoire de l'Art dans l'Antiquité*, vii. 299.

The history of Greek art¹ offers multiplied instances of this vital and effective interaction between the colonies and the mother city. A colony, free from the hampering traditions of a school, aided, it might be, by the discovery of a new material as the medium of artistic expression, would strike out some bold experiment which only received its finished form in the old home. Among the causes which acted as a powerful stimulus on artistic production none ranks higher than the agonistic contests of Greece. The desire to win national renown in this field of coveted achievement created a civic rivalry, intense in character and of far-reaching consequence. Each state was eager to know and appropriate the best results that had elsewhere been accomplished. Hence there was an unlimited interchange of art products extending even to the outlying regions of Hellenism. Famous artists travelled with their wares. Not only were the great religious and social centres, such as Olympia, Delphi, Delos, Miletus reposi-

¹ Here I am much indebted to hints kindly given me by Professor Waldstein.

tories—we might almost say museums—where works of art could be viewed, but minor localities also took a pride in acquiring masterpieces representing well-known individuals or different schools. This free trade in art had in it an educative and expansive force ; it gave unity no less than variety to artistic culture ; it quickened the sense of Hellenic patriotism ; it had an influence analogous to that exercised by the poetic recitations of the wandering rhapsodists on the thought, the language, and the sentiment of Greece.

Here I can do no more than allude to the topic. For the detail we should recall the history of sculpture from the second half of the seventh century onward, especially in connexion with Chios, Crete, Samos, and other islands, whence the hereditary craft of certain families and schools found its way to the Grecian mainland. To Glaucus of Chios is attributed the invention of soldering iron ; to Melas of Chios, the first working of marble—an art which he bequeathed to his son Micciades and his direct descendants, Archermus, Bupalus, and Athennis.

In Samos the art of bronze-casting originated with Rhoecus and his son Theodorus. Crete produced a well-known school of sculpture, the earliest names being those of Dipoenus and Scyllis, who travelled through Greece proper, visiting Sicyon, Argos, Cleonae, and Ambracia, and there introduced their new methods. Later, during the second half of the sixth century and the first half of the fifth, we note the fresh and daring originality displayed in sculpture by Sicily—pre-eminently in the earlier metopes from Selinus—and also by Magna Graecia. Pythagoras of Rhegium, a rival of Myron of Eleutherae, and famous chiefly as the sculptor of Olympic victors, introduced his principles of ‘symmetry and rhythm’; he marks the last step in the process of emancipation from archaic and hieratic bonds, which prepared the way for the age of Phidias. Another colonial sculptor of genius was a contemporary of Phidias—Paeonius of Mende, near Aenus in the Thracian Chersonese. His *Nike*, discovered at Olympia in 1875, exhibits an original spirit which undoubtedly influenced the art of the fifth century.

Again, in painting, Polygnotus of Thasos, under whom were executed the great mural decorations at Athens, appears to have held with Cimon a position similar to that of Phidias with Pericles. In the Periclean age itself one of the most distinctive features of Attic art is its breadth of view, its large hospitality, its power of assimilating every fruitful element of artistic taste and culture which came to it from all other Hellenic centres. Even in the following period, when Argos and Sicyon and Athens took the lead, it is worth remembering that among sculptors Scopas was a Parian ; and in the fourth century, when painting reached its highest point, the masters of the art were Zeuxis from Heraclea, Parrhasius from Ephesus, and Apelles from Colophon.

In that enchanted island of Sicily, which for more than a thousand years was the battleground of southern Europe, swept by a long succession of conquering races, Greeks and Phoenicians confronted one another for centuries. At certain critical moments of history Phoenicia threatened to engulf our Western civilisation.

Yet to-day, go where we may through the island, it is Greece that speaks to us, in her theatres and temples, in her ruined columns and along deserted shores. The voice of Greek poets, Greek philosophers and historians, who lived or died there, is still heard in the undying pages of the past. As for Phoenicia, in Sicily as elsewhere, her memorial has perished with her. In her day she did some humble, but real, service to mankind in helping forward, though with a reluctant hand, a more gifted people on the road of material progress. To her they owed their first lessons in shipbuilding and navigation, their knowledge of some of the lesser arts and crafts, and, as it would seem, certain practical applications of arithmetic. But, with all her wealth, she passed away, as was foretold by Ezekiel in his doom of Tyre, and the vestiges of her that remain have an antiquarian, not a human interest.

It is just this human quality, lacking in the Phoenicians, which marks so conspicuously the Hellenic temperament. There is in it a natural expansiveness, a desire to enter into kindly

human relations with others, to exchange greetings with the stranger on the road, to give utterance to the passing thought or fugitive emotion ; or, if oral utterance is impossible, to make writing serve the turn of speech, and so bind together in friendly intimacy the present and the absent, the living and the dead. Even inanimate objects are drawn into the circle of this genial human intercourse. A bowl forestalls your curiosity by telling you something of its personal history. A word or jotting on a piece of pottery—sometimes a mere “*προσ-αγορεύω*”—carries the message of the artist to his friend. Or again, a fragment inscribed with the name of an Athenian youth calls up a tender reminiscence of old friendship when it is found far from Athens in the rock-tombs of Etruria. The “*χαίρε*,” again, that is uttered over the departed is repeated on the sepulchral slab ; and not infrequently the farewell word is expanded into a brief dialogue between the dead man and the surviving friend, or even a chance wayfarer. Such sepulchral greetings have a memorial value of a very special kind.

Unlike more formal monumental inscriptions, they are the direct address of person to person ; they make an immediate appeal to the heart for the very reason that they are so simple, so spontaneous ; as if the unspoken thought had been intercepted before it reached the lips, and had taken external shape while yet upon its way.

In all these instances mind is not subjected to things material ; it is the inner world that dominates the outward. This is of a piece with other characteristics already noted. In Plato's ideal commonwealth material well-being does not occupy a commanding place. The true constituent elements of happiness are moral and intellectual. It is only in the Utopias of the comic poets that material enjoyments come into the foreground of the picture. In one of the fragments of Pherecrates¹ (a contemporary of Aristophanes), human beings are by the bounty of Plutus equipped with all good things without any effort of their own : 'Of their own accord rivers of black broth,

¹ *ap.* Athen. vi. 97.

gushing and gurgling, will flow along the highways from the springs of Plutus. . . . From the roofs rivulets will run of the juice of the grape with cheese-cakes and hot soup and omelets made of lilies and anemones.' Some rabbinical descriptions of the material happiness that will prevail in the visible kingdom of God do not fall far short of this comic paradise. The rivers will flow with wine and honey ; the trees will grow bread and delicacies ; in certain districts springs will break forth which will cure all diseases ; suffering will cease, and men will be very long-lived, if they die at all. Even if we admit that 'a good dose of materialism may be necessary for religion that we may not starve the world,' still Judaism, even in its loftiest moments, is a little too much inclined to hanker after material delights, and to express itself in a form which would have shocked the ideal sentiment of Greece. Take again the enjoyment of a Greek festival. The occasion was not, as with other nations, one for eating and drinking. The people shared the more refined tastes of their gods, who, at the agonistic

and dramatic festivals, came forth for the day from their sanctuaries, and mingled gladly with the throng of worshippers, demanding from them no costly banquets, but perfected human powers dedicated to the service of religion: physical manhood with all its disciplined skill; powers too of intellect and imagination, expressing themselves in diverse forms of poetry and music. Similarly in the great national athletic contests, so long as the finer instinct of Greece prevailed over Asiatic ostentation, the reward of the victor had no material value; the wreath of wild olive, laurel, or parsley, with which he was crowned, was but the symbol of his consecration, nor did he retain it as a personal possession; it was hung up in the shrine of the local deity.

The Greek way of regarding private luxury offers a similar note of idealism. Money lavished on purely personal enjoyment was counted vulgar, oriental, inhuman. It was an offence against good taste, a violation of the law of measure and self-restraint, the glorification of the individual on his selfish side. It

implied a failure to discern the true ends which make social existence desirable. The famous saying of Pericles, 'We are lovers of the beautiful, but without extravagance' (*φιλοκαλοῦμεν γὰρ μετ' εὐτελείας*), may be taken as the motto of the private life of the Periclean age. Refinement and simplicity—such was the ideal union. Mere economy had no attraction for a Greek, the real question being not the amount you spend, but the occasion of the outlay and the end in view. As for meanness, it was viewed with special disfavour. We may recall the man in Aristotle's *Ethics*, who, having spent liberally on a fitting object, then spoils the whole effect for the sake of a trifle (*ἐν μικρῷ τὸ καλὸν ἀπολεί*).¹ But, of all forms of meanness, the worst was that which was combined with display; of which we have an example in a fragment of a comic poet, where an economical person boasts that he had invited his guests to a wedding breakfast on the express understanding that they were each to bring their own food. Large outlay on rare and interesting occasions

¹ *Eth. Nic.* iv. 2. 21.

even in private life meets with approval from Aristotle ; and one of the most characteristically Greek features in his description of such justifiable outlay is that not only is the outlay on the great scale, it is also in the grand manner. The total effect is impressive ; it depends not on the amount expended, but on a certain harmonious and aesthetic quality that affects the imagination.¹

Great outlay, according to the old ideal of Athens, should be limited to public objects. In the next generation, Demosthenes looks back with regret to the lost simplicity of private life. In earlier Athens, he says, the houses of Miltiades and Themistocles differed in no way from those of the ordinary citizen, while the public buildings and temples were on a scale of grandeur and magnificence that no future ages could surpass.² The vast sums spent on the Parthenon and other edifices have, indeed, been criticised by some modern economists as so much wealth locked up in bricks and mortar—as unproductive expenditure which contributed

¹ *Eth. Nic.* iv. 2. 10.

² *Dem. Olynth.* iii. 25-26.

to the ruin of Athens. From the narrow financial point of view it may be difficult to justify such expenditure. But, if we try to look at it in the Athenian spirit, is there not much to be said in its defence? Simplicity in the home, splendour in the city—that was the principle. To spend largely on our private selves, on our personal satisfaction, was luxury, and culpable luxury. To incur great outlay for worthy objects which transcend self and minister to the enjoyment of the community, was praiseworthy munificence. The individual man and his material surroundings passed away; the city was the enduring reality; it was in some sense a spiritual fabric, the embodiment of the people's nobler aspirations, of their higher, their collective self. All the efforts of art might worthily be expended in its service; that wealth was not wasted which added to its beauty and dignity, and inspired in the citizens a passionate and admiring attachment. Here, again, the Athenians look beyond material interest or profit, and estimate the value of a thing in relation to ideal ends, which are above the world of sense.

This conviction that the things of the mind have a worth, an inherent dignity, which cannot be measured in terms of money, is at the root of many Greek ideas on education. If we would pursue knowledge aright, we must love it disinterestedly. Even learning may be followed in the spirit of a shopkeeper ; and the intellectual vulgarity thus fostered is more ignoble than the frank avowal of money-getting as in itself the end. Nothing is so truly degrading as the intrusion of lower and mercenary motives into the sphere of the higher activities. Plato¹ distinguishes between the education which aims only at outward and worldly success and the true, the liberal education, which fits men for perfect citizenship. ‘We are not now speaking of education in the narrower sense, but of that other education in virtue from youth upwards, which makes a man eagerly pursue the ideal perfection of citizenship, and teaches him how rightly to rule and how to obey. This is the only education which, upon our view, deserves the name ; that other sort of training

¹ *Laws* i. 643 E-644 A.

which aims at the acquisition of wealth or bodily strength, or mere cleverness apart from intelligence and justice, is mean and illiberal, and is not worthy to be called education at all.'

The superior value of leisure in the Hellenic scheme of life as compared with work connects itself with this high ideal of citizenship. Leisure is the Hellenic starting-point, the normal condition of the citizen, the prerogative of freemen. Without leisure there is no freedom. 'We work,' says Aristotle, 'in order that we may have leisure.'¹ At first sight this may bear some resemblance to the schoolboy view of the working term as being of the nature of an interruption, an infelicitous break, in the holidays. But leisure to the Greek thinker means not the opposite of activity—for activity is of the essence of life—but a special form of activity; an activity not evoked by external needs, but free, spontaneous, and delightful; an ordered energy which stimulates all the vital and mental powers. It is an energy strenuous

¹ *Nic. Eth.* x. 7. 6 ἀσχολούμεθα γὰρ ἵνα σχολάζωμεν.

and productive, released from the bondage of mechanical routine, and satisfying at once the instinct for conduct, the instinct for knowledge, and the instinct for beauty. Hence the organised enjoyment of leisure was elevated by the Greeks into a national art, and associated with religion and politics. The games, the festivals, the dramatic performances provided the community with a refined recreation which was the birthright and privilege of all. Greek leisure, then, was not idleness. With the more finely endowed natures it led to philosophy. There is a passage in Plato's *Symposium*¹ where Apollodorus, a pupil of Socrates, is speaking of his love of philosophic conversation. 'But when I hear other discourses, especially those of rich men and traders, they are irksome to me. I pity you who are my companions, because you always think that you are hard at work when you are really doing nothing' (οἷεσθέ τι ποιεῖν οὐδὲν ποιοῦντες). So the mere money-maker is the idler; it is he who is engaged in unproductive labour. The 'lover

¹ *Symp.* 173 c.

of wisdom' is the true worker ; he consecrates his leisure to ends that are human and delightful. It is half playfully said, but one sees the meaning. And it reminds one a little of a passage in R. L. Stevenson's *Inland Voyage*, where he tells of the evening he spent at the Club-house of the *Royal Sport Nautique* in Brussels. 'We are all employed in commerce during the day ; but in the evening, *voyez-vous, nous sommes sérieux !*' 'These,' says Stevenson, 'were the words. They were all employed over the frivolous mercantile concerns of Belgium during the day ; but in the evening they found some hours for the serious concerns of life. I may have a wrong idea of wisdom, but I think that was a very wise remark.' It was only in the decay of civic life, when thought was divorced from action, and cloistered learning had become the fashion of a few, that σχολή or leisure came to denote a busy trifling, and the adjective 'scholastic' was accepted as equivalent to 'pedantic.'

With the ideal view of leisure went a corresponding ideal conception of friendship. The

intellectual employment of leisure consisted mainly in oral discussion on the deeper problems of human life. Only through the strife of conversation and the kindling contact of mind with mind could truth be elicited. An atmosphere of intimacy was the first condition of disinterested learning. Friendship and philosophy were linked together in inseparable union, and perfect friendship became in itself a mode of mental illumination. A man's 'wits and understanding,' says Bacon, 'do clarify and break up in the communicating and discoursing with another.' Friendship 'maketh daylight in the understanding out of darkness and confusion of thoughts.' That is a genuine Hellenic sentiment. The friendships of Greece are still proverbial; and so important a factor did friendship form in social intercourse, especially when the loss of freedom had robbed politics of its chief interest, that the rules to be found in the later Greek writers for the making of friends are as numerous as the modern prescriptions for making happy marriages. Such phrases as 'he who has friends has no

friend'¹ point to the high demands implied in perfect friendship. The friendship between good men as sketched by Aristotle² glows with an eloquence which surprises us in a writer so studiously quiet in tone, and deserves to stand beside the impassioned chapter describing the bliss of philosophic speculation. Friendship, he tells us, is realised in that partnership of speech and thought in which the distinctive life of man consists, a life that is social, not merely gregarious—‘that is what living together means; it is not as with cattle herding on the same spot.’ To know that you have a good man as your friend quickens the play of vital energy; it promotes the vivid consciousness of life which is the essence of happiness. Your friend is different from you and yet identified with you; and in the spectacle of his noble actions and the sympathetic sense of his existence your own sense of personality is ennobled. It is even a friend’s privilege to give up wealth,

¹ Diog. Laert. v. 21 ὅ φίλοι οὐδείς φίλος. So *Eth. Eud* 1245 b 20 οὐδείς φίλος ὅ πολλοὶ φίλοι.

² *Eth. Nic.* ix. ch. 8 and 9.

station, life itself, for the sake of his friend, and so achieve the true self-love, realising his higher self through self-sacrifice. 'He will prefer,' says Aristotle, 'the intense joy of a brief moment to the feeble satisfaction of an age, one glorious year of life to many years of trivial existence, one great and glorious deed to many insignificant actions.'¹ Friendship is for Aristotle the glorified form of human intercourse.

I am far from suggesting that these Greek ideals, just as they stand, can be transferred to our own age and country. In many points of detail the Greek way cannot be our way. Some lines of necessary divergence will at once have occurred to you while I have been speaking. Under the stress of our industrial life the principles here indicated will need adjustment, adaptation, limitation. But the principles themselves, I would submit, are profoundly and permanently true. And, in the task of education, perhaps, as much as in any department of civic

¹ *Eth. Nic.* ch. 9. 9 ὀλίγον γὰρ χρόνον ἡσθῆναι σφόδρα μᾶλλον ἔλοιτ' ἂν ἢ πολὺν ἡρέμα, καὶ βιώσαι καλῶς ἐνιαυτὸν ἢ πόλλ' ἔτη τυχόντως, καὶ μίαν πράξιν καλὴν καὶ μεγάλην ἢ πολλὰς καὶ μικράς.

life, we need a reminder that there are certain ideals of character, certain paramount ends of conduct, which should underlie and determine all our efforts. We are tempted, perhaps, to fix our eyes on the machinery of education, on the subjects of instruction, on the direct mercantile results of our system, on our own immediate ends as the teachers of this or that branch of knowledge. But sometimes we may do well to test and revise our standards ; to ask ourselves what, after all, we are aiming at, what kind of human being we desire to produce.

It was part of the beneficent function of Greece to emphasise this idea. The Greeks, as I have tried to show, introduced a large and humanising conception into the one-sidedness of an earlier civilisation with which they came in contact. They had a perception of what Isaiah calls 'the things by which men live.' They knew that 'man does not live by bread alone,' that livelihood is not life, that mere wealth is not well-being. The satisfaction of material wants is not the end of human endeavour. The wealth of nations, like the happiness of

individuals, has its source deeper than in the accumulation of riches or the expansion of commerce. The true value of the goods of life is determined by the sense of life as a whole, and by their relation to the higher and distinctively human ends of existence. All this may be called idealism. I have here omitted all reference to the ideal creations of Greek poetry, to those features of character which lift the men and women of Homer or Sophocles above the trivial and the real, and which, in spite of all moral flaws and imperfections, make us feel that they belong to a humanity nobler and richer than the people of our everyday world—that they are real and concrete personalities, and yet ideal types. Nor, again, have I mentioned the heroic figures who stand out at intervals in the pages of Greek history—men who responded to great calls of duty and showed a splendid disregard of consequences ; rare and exceptional men such as inspired the biographies of Plutarch. I speak of idealism in a more restricted sense. We have seen how the breath of poetry touches the common affairs of life, disengaging

the things of the mind from the things of sense. It is partly poetry, partly philosophy ; for the Hellenic people felt by a poetic instinct truths which their philosophers arrived at by reflection and analysis. It was these truths that gave meaning and reality to the public and private life of the Greeks—their institutions, their external surroundings, their recreations—to their estimate of human personality and human fellowship, so that the practical world was for them lit up by an imaginative ideal.

III

THE GREEK LOVE OF KNOWLEDGE

NO one can read Homer without being aware that the spirit of man has here shaken off the torpor of an earlier world and has asserted its freedom. There is no brooding sense of mystery ; none of those oppressive secrets with which the atmosphere of Oriental poetry is charged. A fresh and lucid intelligence looks out upon the universe. There is the desire to see each object as it is, to catch it in some characteristic moment of grace or beauty. And the thing seen is not felt to be truly understood until it has taken shape in words, and the exact impression conveyed to the eye has been transmitted to another mind. A single epithet, one revealing word in Homer will often open up to us the very heart of the object ; its inmost and

permanent character will stand out in clear-cut outline. Nothing is too great, nothing too trivial, to be worth describing—the sea, the dawn, the nightly heavens, the vineyard, the winter torrent, the piece of armour, the wool-basket, the brooch, the chasing on a bowl. Over each and all of these the poet lingers with manifest enjoyment. There is but a single exception to the rule of minute delineation. In the description of the human person the outward qualities are but lightly touched. Beauty and stature—these are noted in general terms; the colour of the hair is sometimes added; not unfrequently, it would seem, as a racial characteristic. But the portraiture of the individual is not drawn with any exactitude. There is no inventory of the features of men or of fair women, as there is in the Greek poets of the decline or in modern novels. Man is something different from a curious bit of workmanship that delights the eye. He is a ‘speaker of words and a doer of deeds,’ and his true delineation is in speech and action, in thought and emotion.

Again, though each thing, great and small, has its interest, the great and the small are not of equal importance. There is already a sense of relative values ; the critical spirit is awake. The *naïveté* of Homeric society must not lead us to think of Homer as representing rude and primitive thought. Homer stands out against a vast background of civilisation. The language itself is in the highest degree developed—flexible and expressive, with a fine play of particles conveying delicate shades of feeling and suggestion. Homeric men are talkative ; each passing mood seeks some form of utterance ; but garrulous they are not. They wish to speak, but they have always something to say. They are bent on making their feelings and actions intelligible. They endeavour to present their case to themselves as it presents itself to the minds of others. They appeal both to living witnesses and to the experience of the past ; they compare and they contrast ; they bring the outer and the inner world into significant connexion ; they enforce their arguments by sayings containing the condensed

wisdom of life. Homeric discourse, with the marvellous resources of its vocabulary, its structural coherence, its intimate union of reason and passion, has in it all the germs of future Greek oratory.

Moreover, the poet aims at being more than entertaining. He sings to an audience who desire to extend their knowledge of the facts of life, to be instructed in its lessons, to enlarge their outlook. Gladly they allow themselves to be carried into the region of the unknown. Common reality does not suffice. They crave for something beyond it. But the world of the imagination is no nebulous abode of fancy ; it is still the real world, though enriched and transfigured, and throbbing with an intenser life. Through known adventures they pass imperceptibly into an undiscovered country—strange and yet familiar—in which they still find themselves at home. Poetry is not for them, as it so often is for us, an escape from reality, a refuge from world-weariness.

Strabo observes that 'to construct an empty teratology or tale of marvels on no

basis of truth is not Homeric';¹ and that 'the *Odyssey* like the *Iliad* is a transference of actual events to the domain of poetry.'²

He insists, in particular, that 'the more Homeric critics' (οἱ 'Ομηρικώτεροι)—as opposed to Eratosthenes and his school—'following the poems verse by verse' (τοῖς ἔπεσιν ἀκολοθοῦντες) were aware that the geography of Homer is not invented; that he is 'the leader of geographical knowledge' (ἀρχηγέτης τῆς γεωγραφικῆς ἐμπειρίας),³ and that his stories are accurate, more accurate than those of later ages.⁴ Strabo has, of course, an excessive belief in the scientific accuracy of Homer; still the *Odyssey* is a truly remarkable geographical document, and recent investigations tend to heighten its value as a record of early travel. The desire indeed to identify Homeric localities and even personages, has

¹ Strabo i. 2. 9 ἐκ μηδενὸς δ' ἀληθοῦς ἀνάπτειν κενὴν τερατολογίαν οὐχ 'Ομηρικόν. Cp. i. 2. 17 τὸ δὲ πάντα πλάττειν οὐ πιθανόν, οὐδ' 'Ομηρικόν.

² *Ib.* iii. 2. 13 ὥστε καὶ τὴν 'Οδύσσειαν καθάπερ καὶ τὴν Ἰλιάδα ἀπὸ τῶν συμβάντων μεταγαγεῖν εἰς ποίησιν.

³ *Ib.* i. 1. 2.

⁴ *Ib.* i. 2. 7.

led to some strange results both in ancient and modern times. An ingenious writer, who has translated the *Odyssey*, convinced himself that the authoress of the poem was 'a very young woman who lived at a place now called Trapani, and introduced herself into the work under the name of Nausicaa'—the would-be princess being in truth a 'practised washerwoman,' who in several passages betrays a suspicious familiarity with that art. But, apart from such extravagances of criticism, the *Odyssey* in all its geographical bearings has lately been made the subject of a fascinating and exhaustive inquiry by M. Victor Bérard in his two volumes entitled, *Les Phéniciens et l'Odyssée*. Whatever may be thought of his Phoenician theories, and rash as we may regard some of his attempts at locating the scenes described in the poem, M. Bérard has shown with a wealth of illustrative material and under entirely new lights, how precise an acquaintance the poet had with the navigation of the Mediterranean, with its winds and currents, the coasts and islands, and with the habits of those early

mariners.¹ Even when we pass into the outer zone of the wanderings of Odysseus, there are links of connexion with reality. And we can imagine with what avidity the seafaring population of traders, pirates, and sailors on their return home from their voyages listened to the recitation of the *Odyssey*—to the description of places lying on fabulous shores or bordering on the world of fairyland, yet calling up frequent reminiscences of the actual lands they had themselves visited, and of perils they had encountered.

The close correspondence in the *Odyssey* between poetic fancy and the realities of a mariner's life may be illustrated by a few examples taken from M. Bérard. In Book ii. 212 ff.² Telemachus asks the suitors for a ship and twenty comrades, that he may go to Sparta and sandy Pylos to inquire about his father's return. They refuse. Athene, however, under the form of Mentor equips the

¹ Cp. Strabo i. 2. 20 *κάν τοῖς κλίμασι δὲ κάν τοῖς ἀνέμοις διαφαίνει τὸ πολυμαθὲς τὸ περὶ τὴν γεωγραφίαν* "Ομηρος.

² Bérard, vol. i. p. 64 ff.

expedition. Some hours after sunset Mentor and Telemachus set sail. The time is marked by line 388 :—

δάετό τ' ἡέλιος σκιάωντό τε πᾶσαι ἀγνιαί—

a formula occurring, in connexion with travel, seven times in the *Odyssey*, and denoting, apparently, the dead of night. Athene sent them 'a favouring gale, a fresh wind from the North West (*ἀκραῇ Ζέφυρον*) singing over the wine-dark sea.' Next morning at dawn they reach Pylos. Turn now to the official 'Sailing Directions' of to-day. In these Greek waters, we are told, land and sea breezes follow one another alternately. The sea breeze springs up each morning about 10 A.M. During the day, therefore, it keeps the ships locked in the harbour. At sunset it falls. Then for several hours there is a calm. Towards 11 P.M. the land breeze rises. Hence, this ship of Telemachus leaving Ithaca about 11 P.M., sails almost before the wind to the Peloponnese. The wind and the pilot do the work. At early dawn the mariners easily make the harbour. Later, it would be more difficult,

for—see again ‘Sailing Directions’—the land breeze then freshens, and does not fall till about 9 A.M. The poet who described this voyage of Telemachus wrote, we cannot doubt, with all the knowledge of a skipper.¹

One more example may be added.² In Book V. 295-296, after Odysseus had quitted the island of Calypso, as he approaches the Phaeacian coast a tempest arises :

σὺν δ' Εὐρώς τε Νότος τε ἔπесον Ζέφυρός τε δυσηῆς
καὶ βορέης αἰθρηγενέτης μέγα κῦμα κυλίνδων.

‘The South East and South West wind clashed and the stormy North West, and the North East that is born in the bright air, rolling onwards a great wave.’ Here we have four winds, Eurus, Notus, Zephyrus, Boreas. Finally Boreas prevails (383-392). It lasts two days and two nights ; then it falls, and a

¹ The same custom of embarking at night is found in three other places in the *Odyssey* :—iv. 780 ff., where the sailors go to waylay Telemachus on his return ; xiii. 24 ff., describing the convoy of Odysseus from Phaeacia ; xv. 389 ff., Eumaeus’ story of the Phoenician merchant-ship quitting the isle of Syria—the same formula being there used (xv. 471) as in ii. 388 δύσετό τ’ ἥλιος κ.τ.λ.

² Bérard, vol. i. p. 481 ff.

‘windless calm’ comes on. This was on the morning of the third day.

Again we look at our ‘Sailing Directions.’ ‘It frequently happens,’ we read, ‘that winds from the N.E., N.W., and S.E. blow at the same time in different parts of the Adriatic. The wind called *Bora* is most to be feared and demands active and incessant watch. . . . Its most furious blasts are announced by the following symptoms—a black and compact cloud, surmounted by another cloud more light and fleecy, covers the horizon in the N.E. (cp. *αἰθρηγενέτης*). . . . In summer it never lasts more than three days.’¹

This, says Bérard, is not the storm of literature, but a genuine Adriatic storm. Virgil’s storms always last three days: that was part of his poetic furniture:

Tres adeo incertos caeca caligine soles

Erramus pelago, totidem sine sidere noctes.²

The poet of the *Odyssey* knows what he relates; he is minutely accurate in each detail; and the

¹ *Instructions Nautiques*, No. 706.

² *Aen.* iii. 203-204.

Adriatic storm, as he describes it, off the Phaeacian coast, is a curious confirmation of the old tradition that the island of Phaeacia is none other than Corfu.

The love of knowledge (τὸ φιλομαθές), says Plato,¹ is as marked a characteristic of the Greeks as is the love of money (τὸ φιλοχρήματον) of the Phoenicians and Egyptians. From the dawn of history *to know* seemed to the Greeks to be in itself a good thing apart from all results. They had a keen-eyed and disinterested curiosity for the facts of outward nature, for man—his ways and his works—for Greeks and Barbarians, for the laws and institutions of other countries. They had the traveller's mind, alert in observing and recording every human invention and discovery. One thing alone they viewed with unconcern—the language of the foreigner. Up to the time of Alexander, the Scythian Anacharsis is the only traveller of whom we read as having thought it

¹ *Rep.* iv. 435 E. Cp. *Laws* v. 747 C, where the contrast between σοφία and πανουργία is noted as a similar race distinction.

worth his while to learn any language other than his own. Neither Herodotus, nor Democritus, nor Plato, availed themselves, as far as we know, of any such linguistic aid in their researches. Greek seemed to them the only human language ; and even a sceptical philosopher like Epicurus felt no doubt that the gods, if they spoke at all, spoke in Greek. The neglect of foreign languages led to consequences more serious than the absurd etymological guesses that found acceptance in Greece. The notion that Greek words represented the original and natural names of things gave rise to mistaken theories as to the relation of language and thought. Even so great a thinker as Plato fell a victim to fallacies which could hardly have misled him had he been familiar with the grammar of any other tongue.

But the open eye and the open mind are not all that is required to discover truth. The Greeks soon became aware that, in order to see rightly, the facts must be looked for in a special way. ‘The god of Delphi,’ says Heraclitus, ‘neither speaks nor conceals, but

gives a sign.’¹ And again, ‘Nature loves to hide.’² She must be tracked, therefore, into her inmost recesses. Her secret must be wrested from her unawares. In the process of initiation into her mysteries no one can succeed who is faint-hearted in the search. ‘Unless a man has good hope’—once more to quote Heraclitus—‘he shall not find out the unexpected.’³ Truth assumes paradoxical forms. It is the incredible which happens, and the investigator must be on the look-out for surprises. But the stage of wonder is only the initial stage in scientific inquiry. ‘We begin,’ says Aristotle,⁴ ‘by wondering that a thing should be so, just as marionettes appear wonderful to those who have not yet investigated the cause’; in the end we should be astonished if things were not as they are: ‘there is nothing that would astonish a geometrician more than if the

² *Ib.* 10 [123] φύσις κρύπτεσθαι φιλεῖ.

³ *Ib.* 7 [18] εἰ μὴ ἔλπηται, ἀνέλπιστον οὐκ ἐξευρήσει.

⁴ Arist. *Met.* i. 2. 983 a 12-20. Cp. Plat. *Theaet.* p. 155 D μάλα γὰρ φιλοσόφου τοῦτο τὸ πάθος, τὸ θαυμάζειν· οὐ γὰρ ἄλλη ἀρχὴ φιλοσοφίας ἢ αὔτη.

diagonal should prove to be commensurate with the side.' The progress of science from the unexpected to the inevitable, as here described by Aristotle, is not unlike his account of the evolution of a dramatic action—the most impressive tragic effect being that which arises from the shock of surprise at an unlooked for event followed by the discovery of necessary sequence: the catastrophe, however startling, could not have been otherwise than it was: the end was already implicit in the beginning.¹

From the outset Greek thinkers looked slightly on that multifarious learning which holds together a mass of unrelated facts, but never reaches to the central truth of things. As soon as they began to think at all, they directed their energies to the search for causes, the discovery of law throughout the universe. They are tempted at times to be too much elated by their own successes, to accept a hasty generalisation, to be over-confident in the power of a formula; they cannot decipher 'the long

¹ *Poet.* ix. II 1452 a 2-3 (the union of the *παρὰ τὴν δόξαν* with the *δι' ἀλλήλα*).

and difficult language of facts.’¹ Yet the facts are looked at steadily, the data of experience are interrogated, sifted, collated, by methods indeed still imperfect, but without bias or partiality. We can see the writers at their task, revising and testing each judgment, and reviewing their conclusions. What a refreshing candour, for instance, it is when a physician, in one of the Hippocratic writings (a treatise *On Diet in Acute Diseases*) introduces a point he had overlooked in the words, ‘This argument will be of assistance to my opponent.’ Everywhere there is the same invincible desire not to rest in outward appearances, but to penetrate to reality, to interpret phenomena, to make the words of nature and of man intelligible. Mere beliefs or opinions—the image is that of Plato,² though he shares the thought with many of his predecessors—are, like the statues of Daedalus, runaway things: not until they have been tied down by the chain of causal sequence do they

² *Meno*, p. 97 E-98 A.

stand fast and become in the true sense knowledge. 'Rather,' said Democritus,¹ 'would I discover the cause of one fact than become King of the Persians.'

The love of knowledge worked on the Greeks with a potent spell. It came to them as did the Sirens' voice to Odysseus, luring him with the promise that he should know all things—the things that have been and those that are to be.² They were, however, partly conscious of the peril. And we find in them that the spirit of inquiry, daring indeed and far-reaching, was generally combined with reverence. It is not the timid Oriental fear that man might find out too much and so incur the jealousy of the gods—though of this feeling traces may be detected; chiefly, however, embedded in ancient strata of mythology: it is a feeling rarely hinted at in literature. The reverence I speak of is rather that restraining instinct which reminds man of the limits assigned to human

¹ Democr. ap. Eus. *Pr. Ev.* xiv. 27. 3 Δημόκριτος γοῦν αὐτὸς ὥς φασιν ἔλεγε βούλεσθαι μᾶλλον μίαν εὐρεῖν αἰτιολογίαν ἢ τὴν Περσῶν οἱ βασιλείαν γενέσθαι.

² *Odys.* xii. 189-191.

faculties, and tells him that the utmost scope of his powers cannot avail completely to grasp the eternal order of the universe. Man cannot place himself at the centre and see as far as the circumference. Empedocles strikes this note in memorable verses :¹

‘Straitened are the powers that are shed through the limbs of men ; many the strange accidents that befall them, and blunt the edge of thought ; brief is the span of that life in death which they behold—swift death to which they are doomed ; then are they whirled away, and like a vapour fly aloft, each persuaded only of that on which he has himself chanced to light, driven this way and that. But the whole—man boasts that he has found it : all idly ; for these things no eye hath seen, nor ear heard, neither may they be grasped by the mind. Thou, then, since thou hast strayed hither, shalt learn no more than human wisdom may discern. But, O ye gods, turn aside from my tongue the madness of these men. Hallow my lips and cause

¹ Emped. 36-49. In this passage some of the readings are doubtful.

to flow from them the stream of holy words. And thee, I beseech, O Muse, much-wooed maiden white-armed, tell me the things that the creatures of a day may hear. From the House of Holiness speed me on my way and guide thy willing car.'

As in conduct the pride (*ὑβρις*) which thrust itself into a sphere not its own, and violated the rights of others—gods or men—was condemned ; so too the feeling prevailed, though less frequently asserted, that the intellect should beware of over-stepping its proper limitations. Here too it was right to exercise the quality of temperate self-restraint (*σωφροσύνη*). Take again the magnificent opening lines of the poem of Parmenides—the poet whose sight was 'straining straight at the rays of the sun.'¹ The youthful inquirer is borne in the chariot of thought to the house of the goddess Wisdom. The daughters of the Sun show the way. At their entreaty the portals of the paths of night and day are flung open by Retributive Justice who holds the keys. The goddess receives

¹ Parm. 144 αἰεὶ παπταίνουσα πρὸς αὐγὰς ἡελίου.

him graciously and proceeds to expound to him both truth and error—‘the unshaken heart of persuasive truth’ and the vain fancies of mortals. The reverential awe with which the search for Truth is here described is rare in the mouth either of poet or philosopher. But an ethical sense—a sense of moral limitations—akin to religious emotion, is conspicuous in the early Ionian philosophy. The great idea which Ionia contributed to human thought was that of the universal rule of law. It is one and the same law that runs through the physical and the moral world: ‘The Sun will not overpass his bounds, or the Erinnyes, the ministers of justice, will find him out.’¹ The link is not yet broken between nature and man. The cosmic order rests on moral sanctions, on certain principles of limitation divinely ordained; it is the embodiment of supreme Justice—that Justice whose earthly counterpart seemed to later Greek thinkers to stand at the summit of all the virtues:—‘neither Evening nor Morning

¹ Heraclit. Fr. 29 [94] *Ἥλιος οὐχ ὑπερβήσεται μέτρα· εἰ δὲ μή, Ἑρινύες μιν δίκης ἐπίκουροι ἐξευρήσουσι*

Star so wonderful.'¹ The thought is not unlike that of Wordsworth's lines :

Thou dost preserve the stars from wrong ;
And the most ancient heavens through Thee are fresh
and strong.

Greek scientific knowledge, however, grew up under secular influences, not as in the East under the shadow of the temple. There was in Greece no separate and leisured class of priests and scholars ; no sacred books which hampered the free play of intellect. Even medicine, which is slow to detach itself from magic, was developed in an atmosphere of lay-thought, partly through the philosophic investigation of nature, partly by the close study of health and disease in those families of physicians in which the art was hereditary. Fortunately for the Greeks they were able to utilise the scientific observations made in Egypt and Chaldaea by an organised priesthood, while they themselves dispensed with the teaching of

¹ Arist. *Nic. Eth.* v. I. 15 καὶ διὰ τοῦτο πολλάκις κρατίστη τῶν ἀρετῶν εἶναι δοκεῖ ἡ δικαιοσύνη, καὶ οὐθ' ἔσπερος οὐθ' ἰώης οὕτω θανμαστός.

the priests. All the accumulated lore of the earlier civilisations they appropriated, making it the starting-point for fresh inquiry. But they never rested in unverified tradition. Even religious cosmogonies they do not take ready-made. Science followed the ebb and flow of thought ; its free movement was unhampered ; its truths were not conveyed through hieratic channels and never hardened into lifeless dogmas.

Thus Greek science, Greek philosophy, is the awakening of the lay mind. The Greeks dared to ask the question 'Why?' The fact was not enough ; they sought out the cause ($\tau\omicron\delta$ διότι) behind the fact ($\tau\omicron\delta$ ὅτι). Their answer to the 'Why?' is often wrong ; but no anxious scruples, no priestly authority deterred them from venturing into the hidden domain of causes. In the abstract mathematical sciences they were the first to ask the *Why* of things, and seldom failed to hit on the true answer. One of the facts long known to Chinese, Hindoo, and Egyptian architects was that if the sides of a triangle are represented numerically by 3, 4, and 5, the sides whose lengths are 3 and 4, are

perpendicular to one another. Century upon century passed before any one asked the question, Why is this so? In a dialogue written by a Chinese emperor, Tchaou-kong, about 1100 B.C., in which the emperor himself takes a part, his interlocutor reveals to him the property of this famous triangle. 'Indeed! wonderful!' exclaimed the emperor; but it never occurred to him to ask the reason:—the wonder in which philosophy begins sometimes stops short of philosophy. Not till the Greeks appeared in history was the reason asked and the answer given. Greek geometry was, in short, a new thing in the history of the human mind. Geometry, according to Herodotus, was born in Egypt; but it was geometry as an applied science, practical in its aims, and such as was requisite for the arts of building and land-surveying. Theoretic geometry the Greeks created for themselves; and so rapid was their advance that by the fifth century B.C., as it would seem, the greater part of what is contained in the elements of Euclid had attained to demonstrative and logical form. The kind

of geometry which the Greeks discovered is characteristic of the idealist temperament so conspicuous in their art and literature. Lines which have length without breadth, which are absolutely straight or curved, indicate at once that we are in the region of pure thought. The conditions of empirical reality are neglected ; the mind is striving towards ideal forms. Pythagoras, we are told, offered a sacrifice to the gods in joy at a mathematical discovery. In what earlier civilisation was mathematics pursued with this disinterested ardour ?

The Jews as well as the Greeks felt that the paramount need of humanity was knowledge—that man should know the truth about himself and his relation to the power outside him. But the Greek, with unwearied insistence, asked himself, What is knowledge ? Can it be attained, and how ? No problem appeared to him more difficult. It was looked at from every side by a succession of great thinkers. Many and various were the answers. To the Jews, on the other hand, the answer was not remote or difficult ; there was but one knowledge and

that the highest: 'The word is very nigh unto thee, in thy mouth and in thy heart, that thou mayest do it.' It had been revealed to them by the divine voice; repeated at every crisis of their marvellous history; written indelibly on the conscience of the nation; it was indeed the secret of which they were the repository, to be guarded inviolate and disclosed in due time to the world. The knowledge of the Lord was the beginning and end of wisdom. And the words of this wisdom—so ran the command—'ye shall teach your children, speaking of them when thou sittest in thine house, and when thou walkest by the way, when thou liest down and when thou risest up. And thou shalt write them upon the door-posts of thine house, and upon thy gates.'

The Greeks, like the Jews, had their sacred volume. Already in the seventh century B.C. at the Delian festival and in many other parts of the Hellenic world, they assembled to hear their minstrels recite the Homeric poems. At Athens, from the sixth century onward, a public recitation of Homer was held every fourth year

at the Panathenaic festival. It was analogous to the Jewish provision that once in every seven years the law was to be read at the Feast of Tabernacles in the hearing of all Israel. In 444 B.C. we read of Ezra on his return from Babylon to Jerusalem renewing the old observance and reading the book of the law to the assembled people; and it is curious to reflect that at Athens at the same time, in the Periclean era, the corresponding custom continued to exist. But there was this difference. Whereas for each nation, Jews and Greeks alike, the reading of their own ancient volume served to heighten the sense of spiritual kinship and to create an ideal of conduct: to the Greeks the Homeric poems had now become but one among many means of satisfying the needs of thought and imagination. The popular mind still found in them the knowledge of all things human and divine; but the deeper and pressing intellectual problems that had arisen, met with no solution there. The drama was already presenting its own interpretations of human destiny; philosophy had entered on its long quarrel with

poetry ; Socrates had started speculation on the road that it was to pursue for centuries. Received traditions were now being questioned. The *Why* of duty, no less than the meaning of knowledge, was being subjected to discussion. Thus the Homeric poems, while they never ceased to be the inspiration of the race, had lost their unique authority. Meanwhile to the Jews the law, in the widest sense of the word, was still the one book on which to meditate day and night. Nor was the knowledge of it a thing to be received with languid or otiose mind, or in the quietude of religious rapture. Man's bliss was to exercise himself therein, to go back upon it in his inmost thoughts, to drink deeply of those inexhaustible springs. The intervals of sacred leisure which were enjoyed by all classes within the community, were devoted to the deepening of the religious life ; for the outward observance of the Sabbath and the non-performance of thirty-nine various kinds of work afterwards enumerated by the Rabbis did not exhaust the significance of the day to pious minds. Moreover, as this knowledge was to be translated

into action, and adapted to all circumstances as the vivifying principle of conduct, it became necessary not to rest satisfied with the letter of the law, but to pass beyond the unwritten word, and divine the things that were unsaid,—or in the later Rabbinical phrase, ‘the commands left to the human heart.’ There remained a multitude of details outside the province of strict law, in which, as with the Greeks, the rules of conduct could only be discovered by immediate perception—by what Aristotle calls *αἰσθησις*—that delicate and sensitive faculty which intuitively apprehends the facts of the particular case. Still the greater issues of life were once for all determined, and there was no riddle left for the wise man to solve.

Aristotle, like the Jew, places the supreme bliss of man in a certain mode of knowing and thinking. But the human Reason is with him the one instrument by which this highest knowledge is to be attained. It is a thing either intrinsically divine or the divinest gift that we possess. Alone it is loved for its own sake ; of all our activities it is the most continuous, the

most pleasurable, the least dependent on external conditions. Man's felicity consists in the exercise of this sovereign faculty with such untiring vigour as our human condition admits. Such a life of speculation is the noblest employment of leisure. It is an energy which is also tranquillity, an activity of mind that is set free from mechanical occupations and the pressure of material needs, and directed inward, not upon ends external to itself;—the deep repose of the soul in the contemplation of truth. It is a life higher than human; nor can we live it save in virtue of the divine principle inherent in us. 'Let us not listen therefore to those who tell us that as men and mortals we should mind only the things of man and of mortality; but, so far as we may, we should bear ourselves as immortals (*ἀθανατίζειν*), and do all that in us lies to live in accord with that element within us, that sovereign principle of Reason, which is our true self, and which in capacity and dignity stands supreme.'¹ Here we have the love of knowledge in its highest Greek conception,

¹ Arist. *Nic. Eth.* x. 7. 8: see the whole chapter.

touched with religious emotion, and almost carried into the sphere of mysticism. I need not stay to enlarge on the divergence between this ideal and that suggested by the words of the Hebrew prophet: 'Let not the wise man glory in his wisdom, neither let the mighty man glory in his might . . . : but let him that glorieth glory in this, that he understandeth and knoweth me, that I am the Lord which exercise loving-kindness, judgment, and righteousness in the earth.'

Consider, again, how the Greeks regarded the facts of history. They felt, first of all, the intellectual curiosity to know what had really happened. A fact was interesting because it was true. The past was in itself worthy of investigation, of tolerant and sympathetic inquiry. We have here "*ἵστορία*" in its primary sense as the search for truth. But no Greek could treat history as a mere succession of facts, a chance sequence of events. An explanation of the facts must be sought, some unifying principle discovered. Particulars must be viewed in larger relations. The interpretative

force of mind must be brought to bear upon them, and their hidden meaning extracted. It is not the facts, but the meaning of the facts, that is of paramount interest ; the facts must, if possible, be made into truths. And it is remarkable with what intellectual insight the great historians of Greece do actually apprehend the wider significance of the special chapters in Greek history which they severally narrate.

The conflict of Greece and Persia was for Herodotus the culminating point of a great drama, a clash of forces rendered inevitable by events that had been long preparing in the kingdoms of the East. Thucydides saw in the Peloponnesian war and in the tragedy of the Athenian downfall, an inner crisis affecting national character. Polybius recognised that with the empire of Rome new historical perspectives were opened up, and countries hitherto disconnected drawn into the current of universal history. Each of these writers was in his own way a philosophic historian. We have already seen in what sense this is true of

Herodotus.¹ To penetrate the mind of Thucydides is a less easy task. In his austere reserve he is far removed from the ingenuous charm and candour of Herodotus. He is not ready to come forward and reason with us. He has no intimate confidences to bestow. He offers few reflections containing a moral judgment. While the moral impression is clear and sharp, the award of praise or blame is left to the reader. Thucydides is concerned with understanding rather than with judging; his aim is to throw light on the laws of human action and the permanent principles of conduct; to enable the statesman to direct the present and in some measure to forecast the future. He is under no illusions. Psychological facts are often unlovely enough: he records them coldly: but to regard him as cynically indifferent is to misread the severe impartiality of his art. He felt the sombre fascination of the Peloponnesian war, its terror and grandeur. Great passions were there aroused, destructive energies let loose, issuing in deeds both of

¹ Supr. p. 32.

savagery and heroism. The outward events were for the historian a material which must be rendered in terms of mind. His philosophic impulse shows itself in tracing causes ; not final causes, as with Herodotus ; but the secondary causes which are revealed on the stage of human life and in the heart of the actors. He does not profess to read the purposes of a supernatural power. Neither destiny nor chance is for him the governing force of the world. Events have their roots in character, of which they are the outcome ; it is here that we must seek their inner meaning. They are not mere startling or dramatic incidents, but phenomena whose reason lies deep in the moral disposition of nations and individuals, and the law of whose succession can be discovered. The great agent in shaping outward circumstances is the human will. The historian, therefore, who would interpret the world of facts must analyse the various forms in which mind manifests itself, must study its laws and reach the vital forces which are at work below the surface. History is a scroll written by human intelligence in the large and

legible letters of the past. Thus, Thucydides is a philosophic historian, but he expounds no theory : he remains a historian, he is not a philosopher—a historian, however, of imaginative insight who brings out both the poetry and the philosophy latent in the facts.

Polybius, writing between two and three centuries later, derives his guiding principles direct from Thucydides. He narrates the struggle between Rome and Carthage for the supremacy of the world ; and his design is to exhibit the organic unity of history, the idea of a universal history corresponding, as he conceived it, to the fact of universal empire. It is this 'clear œcumenical view,' says Freeman, 'which makes him the teacher of all time.' Unfortunately his style is a serious deterrent to the reader. We long for the ease, the finished grace, the flowing simplicity of Herodotus ; or again, for the terse and rapid phrase of Thucydides, the energy, the precision of each single word, the sentence packed with thought. Polybius has lost the Greek artistic feeling for writing, the delicate sense of proportion, the faculty of reserve. The

freshness and distinction of the Attic idiom are gone. He writes with an insipid and colourless monotony. In arranging his materials he is equally inartistic. He is always anticipating objections and digressing ; he wearies you with dilating on the excellence of his own method ; he even assures you that the size and price of his book ought not to keep people from buying it. Yet admirable as is the substance of his writing, he pays the penalty attaching to neglect of form—he is read by the few. His interest, however, for us here is that, while he intends his history to be a practical treatise, containing useful lessons for men of affairs, he is true to the philosophic tradition he has inherited from Thucydides, in his persistent effort to exhibit the relations of cause and effect through the texture of the narrative. In particular, he is at pains to search out the true cause of an event, as distinguished from the occasion of its happening ; and such causes he follows back to their source in character. National life, like individual life, has for him an ethical basis ; it is in character, and the institutions that grow out of

character, that the true movement of a people's history is revealed.

The idea that the true causes of events lie deep in character was appropriated as a theory of history by Polybius: Demosthenes had long ago received it from Thucydides as an inspiring motive of civic eloquence.¹ The Athenians, when defeated by Philip, were wont to lay the blame on their politicians or their generals, on adverse winds, on unkindly fortune. Demosthenes carries the failure back to themselves—to their own indolence and improvidence. He will not be put off with superficial explanations. Character with him is all in all. Every *Philippic* oration is instinct with the thought. 'Is Philip dead? No, he is only ill. Dead or ill, what difference to you? If anything befalls him, you will instantly create another Philip for yourselves.'² Or again: 'Always letting slip the present and imagining that the future will take care of itself, it is we that have made Philip great and exalted him

¹ See S. H. Butcher, *Demosthenes* (Macmillan and Co.), p. 144.

² *Phil.* i. 11.

to a height of power above that of any previous king of Macedon.’¹ Men who can hope to succeed must have a mind that can anticipate and control outward circumstances: but in politics, as in war, the Athenians ‘wait upon events’; they begin to think when the time has come for action; they strike after the blow has fallen.²

The use of opportunity, the strong man’s ability to seize the present and to shape the future, is a favourite topic of Demosthenes. Its full significance may best be read in connexion with the Greek idea of *Kairos* (καίρος) in literature and art. No other nation has distinguished so subtly the different forms under which time can be logically conceived. *Chronos* (χρόνος) is time viewed in its extension, as a succession of moments, the external framework of action. Under this aspect of simple duration Time achieves, it is true, a silent work of its own. Man cannot ignore its revealing power. He looks on and almost unconsciously learns his lesson. The arts, the sciences, come

¹ *Olynth.* i. 9.

² *Phil.* i. 39-41.

into being under its gradual influence. 'Time as it ages teaches all things'¹; 'Time alone is the proof of real truth,'² the 'touch-stone of every deed,'³ the one 'wisest thing.'⁴ The phrases in which Aristotle describes Time as agent or joint-agent in the work of progressive discovery,⁵ bear an impressive resemblance to the thought and language of Bacon. *Chronos*, however, remained on the whole too abstract, too indeterminate to admit easily of personal embodiment in literature or art. It was otherwise with *Kairos*—a word which has, I believe, no single or precise equivalent in any

¹ Aesch. *P. V.* 981 :

ἀλλ' ἐκδιδάσκει πάνθ' ὁ γηράσκων χρόνος.

² Pind. *Ol.* xi. 59-61 :

ὃ τ' ἐξελέγχων μόνος
ἀλάθειαν ἐτήτυμον
Χρόνος.

³ Simon. of Cos Fr. 175 :

οὐκ ἔστιν μείζων βίαςανος χρόνου οὐδενὸς ἔργου.

⁴ A saying of Thales (quoted Plut. *Contr. vii Sap.* 9) in answer to the question τί σοφώτατον ;—Χρόνος · τὰ μὲν γὰρ εὔρηκεν οὗτος ἤδη, τὰ δὲ εὕρησει. Cp. Bacon *Aphor.* xxxii. 'Sapientissima autem res tempus (ut ab antiquis dictum est) et novorum casuum quotidie auctor et inventor.'

⁵ Arist. *Nic. Eth.* i. 7. 17 δόξειε δ' ἂν . . . ὁ χρόνος τῶν τοιούτων εὐρετής ἢ συνεργὸς ἀγαθὸς εἶναι.

other language. *Kairos* is that immediate present which is what we make it ; Time charged with opportunity ; our own possession, to be seized and vitalised by human energy ; momentous, effectual, decisive ; Time the inert transformed into purposeful activity. Not only did the poet Ion compose a hymn to *Kairos* in which he is called the youngest child of Zeus—opportunity being truly thought of as the latest and god-given gift—but in art the rendering of *Kairos* is various and interesting. Sometimes he is a youth pressing forward with wings on his feet and back, holding a pair of scales, which he inclines with a slight touch of the right hand to one side. His hair is long in front and bald behind ; he must be grasped, if at all, by the fore-lock. In one relief, where *Kairos* occupies the centre, *Regret* (*Μετάνοια*) is represented as a shrinking and dejected form who stands beside an old man, symbolising the sadness felt over the lost moment that cannot be recalled. In the palæstra—and here he is most at home—*Kairos* appears in the guise of a Hermes, an athlete god. It

is *Kairos* who seizes the lucky moment in the wrestling bout ; *Kairos* who with his chariot-wheels closely grazes the goal ; *Kairos* to whom men offered sacrifice as they entered the stadium. *Kairos* is the god of the man with a mind swift but sure in decision, and with a body trained to be the mind's obedient servant. The sense of the opportune that is here suggested is as unlike as possible to what is commonly known as 'opportunism' ; it is 'the triumphant flash of daring and right judgment' ; it goes with high originality and initiative, and reaches even to the point of genius.

Thucydides and Demosthenes had the same ideal of statesmanship. Great men are those in whom the power of the spirit dominates matter. Their strong intelligence, free from illusion, their calm and clear reflection does not issue in any hesitating purpose ; it leads direct to action. They know how to seize occasion ; they are masters of things outward ; they go boldly forth to meet the incalculable thing we call fortune ; they thrust obstacles aside or

fall, if needs must be, in the attempt. It is a view akin to that of tragedy, where external actions and events are but the setting in which character is displayed ; where, in a much more complete and deeper sense, man can prove himself to be not the creature, but the lord of circumstances, which he moulds in the strength of his spiritual energy. Just as in the region of creative art the imagination impresses its own form on the lifeless elements, remaking them with its touch ; so too the Greek philosopher, historian, orator, each proclaims in divers ways the supremacy of spiritual over material forces ; each brings some new outlying territory under the domain of reason.

We have followed the working of the Greek intellect as revealed not in a passive reception of ideas, but in the energetic action it brings to bear on all that comes within its range : it correlates, interprets, unifies the facts of experience ; translates outward things into terms of spirit, transmuting all dead material. The views of Greek thinkers on Education are in accord with this attitude of mind. With all

their restless curiosity, their insatiable love of knowledge, they had no respect for mere erudition. 'Wealth of thought, not wealth of learning' was the thing they coveted:—*πολυνοῖήν, οὐ πολυμαθίην ἀσκεῖν χρῆ*, is the striking saying of Democritus.¹ Heraclitus, Plato, Aristotle, all speak in similar depreciatory terms of mere 'polymaths'—men of multifarious learning, untouched by the quickening force of reason. Extensive reading, the acquisition of facts, the storing of them in the memory—all this is possible without any discipline or enlargement of mind. In order that learning may become wisdom two conditions must be satisfied. First, the facts must be assimilated and interpreted; the formative power of thought must work upon the material of knowledge. And, secondly, learning must be humanised. True learning is bound up with human fellowship. It is a partnership in which there is give and take, a joint search and joint discovery. To the Greeks the subject taught seemed of

¹ Democr. ap. Stob. iii. 4. 81. Cp. *Ἰβ. πολλοὶ πολυμαθεῖς νόον οὐκ ἔχουσι*.

less importance than the man who taught it. The teacher's office was to show the right method of learning. He himself is a learner, who in and through learning becomes a teacher. Just as Greek poetry, more than that of any other nation, is the expression of the people's collective life, so Greek learning draws its inspiration not so much from solitary study as from noble companionship and ideal human intercourse. Education, as the Greeks conceived it, was based on broad and deep sympathy—sympathy of intellect and character, and sympathy of aim. The Pythagorean motto *κοινὰ τὰ τῶν φίλων*, 'Friends have all things in common,' might have been written over every Greek class-room. The love of truth, the spirit of joint investigation, the 'following of the argument whithersoever it leads'—this was the bond of union, the prized possession of the brotherhood of learning.

There is one salient difference between education as understood by the Greeks and the popular idea of education in our own day. To the Greeks education was primarily a train-

ing of faculty that should fit men for the exercise of thought and the duties of citizenship. The modern world looks rather to the acquisition of some skill or knowledge that is needed for a career; it thinks more of the product than of the process. Acquaintance with facts counts more with the modern; mental completeness and grasp are primary with the Greek. But that mental completeness was not to be won through intellectual discipline alone; it meant also a discipline and moulding of character, a training in public spirit, a suppression of the individual, a devotion to civic ends. The Greek *Paideia* (παιδεία) in its full sense involves the union of intellectual and moral qualities. It is on the one hand mental illumination, an enlarged outlook on life; but it also implies a refinement and delicacy of feeling, a deepening of the sympathetic emotions, a scorn of what is self-seeking, ignoble, dishonourable—a scorn bred of loving familiarity with poets and philosophers, with all that is fortifying in thought or elevating in imagination. Our nearest equivalent for this

generous and many-sided training is Culture ; but unfortunately the word has acquired a tinge of meaning that is alien to the Greek *Paideia*. Culture to many minds suggests a kind of polish, a superficial refinement. Besides, it has about it an air of exclusiveness ; it is thought of as the privilege of a favoured few. The man of learning in modern times is too apt to remain in seclusion ; he seems to be shut up within a charmed circle, in possession of a secret hidden from the many ; and the impression not unfrequently left on outsiders by the life of learned isolation is conveyed in the remark of a French writer, that ‘every man of learning is more or less of a corpse.’ Now Greek culture in its ideal form is a connecting link between learning and citizenship ; it is a meeting-point of virtue and knowledge, an outcome of character, an attitude of the whole mind towards life. The intellectual *élite* are not estranged from the life of the community. Learning is thus humanised ; instead of a dead weight of erudition it becomes a living force, a civilising and liberating power. We have here

the spirit of a University in its true conception. One chief function of academic training should be to foster this broad view of learning ; and, in so doing, incidentally to disprove the saying : ‘Gentlemen are untaught by the World what they have been taught by the College.’¹

A tincture of Greek is, fortunately, no longer regarded as a hall-mark of good breeding, or a sign that one has acquired at College a few gentlemanly vices. And the popular mind has, therefore, jumped to the conclusion that Greek has ceased to have any value except to furnish barbarous compounds for the advertisement of a new umbrella or of a quack-medicine. The call to burn our unlawful books of Greek is heard from many sides. But those who care for the deeper principles of education will never cease to go back to what the Greeks have said or hinted on this theme. All great teachers have been Greek in spirit. Education, in the Greek view, is the antithesis of any mere specialism, and that in two senses. It emancipates us from the narrowing influence

¹ Berkeley, *Minute Phil.* Dial. v. 24.

of a trade or a purely professional calling, and lifts us into the higher air of liberal studies. But also, even within the domain of learning, we are reminded that expert knowledge may itself become a contraction of the intellect; and that the thoroughness of the craftsman, the minute work of the investigator, must not lead the teacher to miss the larger relations of his subject, and lose sight of the whole. Nor can we forget that the man himself is behind what he says or writes. Plato observes that for the higher forms of literary composition the name of writer or author is an inadequate description: the title is well enough for one who has nothing in him greater than the phrases he puts on paper (τὸν μὴ ἔχοντα τιμιώτερα ὧν συνέθηκεν ἢ ἔγραψεν).¹ And a similar remark may be made about the teacher. As Life is something beyond Literature, so Personality is something beyond Learning. The teacher who leaves an impress on other minds is greater than his own knowledge, greater than the information he conveys. This

¹ Plat. *Phaedr.* 278 D-E.

is true of all teachers who have in any degree succeeded in making their appeal to that mighty and half-utilised force—the idealistic impulses of youth ; and from this point of view Teaching—as I believe some one has said—while it is the vilest of trades becomes the noblest of professions.

IV

ART AND INSPIRATION IN GREEK POETRY

GREEK literature is the one entirely original literature of Europe. With no models before their eyes to provoke imitation or rivalry, the Greeks created almost every form of literary art—the epic, the lyric, the elegy, the drama, the dialogue, the idyll, the romantic novel, history, and oratory ; and the permanence of the types so created shows that they rest on no arbitrary rules or on the mannerisms of a people, but answer to certain artistic laws of the human mind. We who see for the most part only the perfected forms, are apt to forget what varied and repeated experiments, what frequent failures, must have gone to the making of each of these types. In the *Poetics*

Aristotle notes the gradual and tentative process by which special metres proved themselves adapted to the several kinds of poetry—the iambic to tragedy, the hexameter to epic song. They are instances, as we should say, of the survival of the fittest: ἀπὸ τῆς πείρας ἤρמוκεν¹—that is Aristotle's phrase. The process here indicated was a familiar idea to the Greeks. Popular observation summed it up in the simple proverbial form, πείρα ἄριστον, 'nothing like experiment.' It is the sentiment which Herodotus puts into the mouth of Mardonius: 'Nothing comes of its own accord to men, but all things by experiment.'² On the same principle tragedy itself, as Aristotle remarks, 'having passed through many changes found its natural form, and there it stopped.'³ Man's selective instinct, working tentatively,

¹ Arist. *Poet.* xxiv. 5 τὸ δὲ μέτρον τὸ ἡρωικὸν ἀπὸ τῆς πείρας ἤρμοκεν. Cp. iv. 9 ἐν οἷς καὶ τὸ ἀρμόττον [ἱαμβεῖον] ἦλθε μέτρον.

² Herod. vii. 9 αὐτόματον γὰρ οὐδέν, ἀλλ' ἀπὸ πείρης πάντα ἀνθρώποισι φιλέει γενέσθαι.

³ Arist. *Poet.* iv. 12 πολλὰς μεταβολὰς μεταβαλοῦσα ἡ τραγωδία ἐπαύσατο, ἐπεὶ ἔσχε τὴν αὐτῆς φύσιν.

brought the process of development to its proper term.

When once any particular type was created, it assumed its sharp Hellenic outline. No blurred image, no confusion of kinds was permissible. Any deviation from the type fell within well-defined limits. Each branch of literature obeyed a stringent code of its own. Its governing traditions answered to an artistic sense that art to be progressive must also be conservative. It must maintain a spirit of reverent regard for the past. Old material must be used up : new ideas, whether of native origin or due to the absorption of foreign influences, must be slowly assimilated. If in political history we meet with revolutionary violence, in literary as in artistic development there is growth and orderly advance. The whole effort of Greek literature is to evolve itself in unbroken sequence, without the rude snapping of any links which bind the present to the past, with no premature rejection of existing elements.

Yet the persistent force of tradition did not

check the free play of individual genius. With the observance of a strict artistic code and the accepted conventions of a school, the literary art was not hardened into mere formalism. The more rigorous the rules, the greater the triumph of genius in obeying them without effort. In tragedy the poets at first ranged at will over the whole field of legendary story.¹ The domain of the drama was by degrees restricted. But the narrower limits within which freedom was henceforth possible stimulated rather than checked dramatic originality. The inventive faculty found ample scope in re-interpreting the known cycle of legends with subtle and significant divergence in detail. 'Great and precious origination,' says George Eliot, 'can only exist on condition of a wide massive uniformity. When a multitude of men have learned to use the same language in speech and writing, then and then only can the greatest matters of language arise. For in what does their mastery consist? They use words which are already a familiar medium of understand-

¹ Arist. *Poet.* xiii. 15.

ing and sympathy in such a way as greatly to enlarge the understanding and sympathy.' This that is said in the first instance of style, is in its measure also true of the handling of the subject-matter. The creative act of genius does not consist in bringing something out of nothing, but in taking possession of material that exists, in appropriating it, interpreting it anew. The original force of the Greek poet stamps all rude material with the mark of the race—'made in Greece.'

The treatment of the Chorus in the drama is perhaps the most signal instance of the power of the poet to turn to account a consecrated tradition. Here was an undramatic element, that was yet an indispensable part of every play—a religious survival from an early stage of the undeveloped art. The chorus was a collective personage, with a character shifting and ill-defined, an awkward presence on the stage and often out of keeping with the poetic illusion. In Aeschylus it is generally what Aristotle in the *Poetics* (ch. xviii. 7) says the chorus ought to be—'one of the actors'; in Sophocles

more often it fulfils the function assigned to it, in Aristotle's *Problems* (xix. 48); it is a *κηδευτὴς ἄπρακτος*, one who does not act but who is in intimate or friendly relation with some of the actors; an interested spectator or a kindly sympathiser.¹ Who would have thought that an element apparently so inartistic could have been anything but a mere encumbrance, a clog on the action—as indeed it became in Euripides—a structural flaw in the composition?

Yet this ambiguous personage plays a great part. It forms a connecting link between the actors and the audience. Whatever its sympathies may have been in the piece, it generally manages in the end to place itself in the attitude of an impartial witness. In comedy it pronounces the verdict on the *ἀγών*—that pitched battle between the combatants—which is distinctive of this branch of the drama. In tragedy it seldom fails to utter the last word. At certain moments of the play it provides a contemplative pause, an interlude for moralising

¹ *εὐνοίαν γὰρ μόνον παρέχεται οἷς πάρεστιν.*

reflection. In Aeschylus, it becomes the vehicle of the poet's profoundest theological thought ; in Sophocles, more frequently it interprets the course of the action and sums up the emotions awakened in the spectator's mind. In either case, the choral odes, apart altogether from their intrinsic beauty as forms of lyrical and musical utterance, gather up for us the lessons of life and clarify our human experience. Those great and eternal commonplaces in which Greek poetry delights, with their measured cadence, their serene and condensed wisdom, have a strange power of solemnising and subduing the emotions. They come home to us in all the fulness of their original meaning, as familiar truths fraught with new significance. The tension of overwrought feeling is relaxed when the fret and stir of the moment, and the accidents of the individual existence, are placed in the larger perspective of some universal law. In almost every branch of literature we have similar achievements. The great writers, by the very force of their individuality, accept with ease much that is conventional, while they

reject what is merely artificial.¹ The more closely we examine the masterpieces of Greek literature, the greater appears to be the place occupied by artistic tradition and convention. Thus Greece presents a phenomenon unique in literary history—namely, the creation of fixed types, governed by a rigid code of rules, yet working in harmony with the spontaneous play of native faculty.

This continuity of movement in art and literature involved some self-suppression on the part of the individual. While the collective

¹ The history of sculpture affords many analogous examples. See the remarks on the Metopes and Frieze of the Parthenon in a recent volume, *Greek Sculpture*, by E. von Mach, Boston (Ginn and Co.), 1903, p. 216 ff.; compare also pp. 156-160. Similarly in vase-painting, the restrictions of space and the conditions of decorative art force the artist to recognise that the human body is not a human body only, but also a thing that is capable of being rendered as a beautiful pattern. The figures, therefore, are not thrown vaguely into a given space, but are closely tied up and related to the parts they do not fill. And the notable result is that these figures, by mutual adaptations and concessions, gain a heightened beauty through forming part of a decorative design. The feet of the dancing Maenads on Hieron's cup is a case in point. It is, of course, only the great masters who can so employ the limitations imposed. Lesser artists cramp their figures in obedience to physical necessity.

personality of the race is indelibly stamped on the products of the Greek mind—on their art and literature, even on their science—the personality of the individual, though seldom to be mistaken in the realm, at least, of imaginative creation, does not appear in an obtrusive form. The plastic clearness of outline which is characteristic of the classical Greek manner is mainly due to two causes :—on the one hand, to the omission of accidental detail, on the other to the absence of a disturbing atmosphere. In the romantic handling of a theme the image is apt to be seen through a sensitive and vibrating medium, through a coloured light, in the ‘halo’ of romance ; and the ‘halo,’ the atmosphere, is often caused in part by the excited personality of the writer. He catches fire from his own creation, he projects his personal trouble into his art, and the contagion spreads to the reader. The great classical writer remains more detached ; he holds the image, so to speak, at arm’s length. The spectacle he presents impresses us by its own moving quality ; there is no personal or turbid atmosphere ; no per-

plexed light is interposed between our eye and the object. We are still within the domain of the universal reason.

Yet according to the popular view poetry was a thing inspired—*ἐνθεον ἡ ποίησις*:¹ it was a form of frenzy, a divine possession. Poetic inspiration was regarded as supernatural in its origin, the poet being but the channel through which the god finds utterance; he acts under a stimulus from without, which robs him of his reason. This theory of direct revelation is explicitly stated in prose for the first time by Democritus of Abdera;² it is applied by him to Homer; it remains current to the latest period of Greek literature. The idea of the frenzied poet strikes us as having a strangely un-Greek air. It seems to accord better with

¹ Arist. *Rhet.* iii. 7. 1408 b 19.

² Dio Chrys. *Or.* liii. ad init. ὁ μὲν Δημόκριτος περὶ Ὀμήρου φησὶν οὕτως· “Ὀμηρος φύσεως λαχὼν θεαζούσης ἐπέων κόσμον ἐτεκτῆνατο παντοίων.” Clem. *Strom.* vi. 168 p. 827 P καὶ ὁ Δημόκριτος ὁμοίως (*i.e.* like Plato in the *Ion*) “ποιητῆς δὲ ἄσστα μὲν ἂν γράφηι μετ’ ἐνθουσιασμοῦ καὶ ἱεροῦ πνεύματος, καλὰ κάρτα ἐστίν.” Cic. *de divin.* i. 38, So ‘negat enim sine furore Democritus quemquam poetam magnum esse posse, quod idem dicit Plato.’

Oriental notions, or with modern speculations about the subliminal self as the region out of which emerge both poetry and insanity. The Greek poets themselves seem to have thought of their own aptitude more as the result of trained skill than of abnormal inspiration. It is remarkable how the word *σοφία*, 'wisdom,' 'skill,' is selected by them to denote the poetic gift where we should be disposed to speak of genius.¹ We are not greatly surprised when a poet like Bacchylides, conscious perhaps of no high originality, speaks of poetry as so much traditional lore: 'Poet from poet learns his art both now and of old.'²

But the case of Pindar is more striking. No poet, it is true, dwells with such conviction on inborn power of genius as surpassing all the efforts of art. 'Nature's gift is always supreme: where the god is not, silence is ever the better part of wisdom.'³ 'He is the

¹ *Some Aspects of the Greek Genius*, p. 17.

² Bacchyl. Fr. 14 [13] ἕτερος ἐξ ἑτέρου σοφὸς τό τε πάλαι τό τε νῦν.

skilled poet to whom nature has taught much.’¹ Proudly he avows his own originality, his daring novelty of treatment: ‘To many have I shown the ways of song.’² Yet he also exalts to the utmost the influence of art. His poetry is a subtle science, which obeys laws of its own, fixed rules or ordinances,³ transmitted by the masters of the craft. And modern research has brought into marked prominence the long development of the lyrical art, and the fashioning of a special vocabulary; it has analysed the elaborate structure of a Pindaric ode, and shown not only the trained skill implied in the poetic handling of the myths, but the science needed to combine the complex resources of metre and music, and adapt them to the intricate choral dance. Truly, as Pindar says, ‘the heights of art are steep’;⁴ and although mere training cannot scale them without the inborn gift, yet nowhere more

¹ *Ol.* ii. 86 σοφὸς ὁ πολλὰ εἰδὼς φῦα: i.e. the true σοφία is φύσις.

⁴ *Ol.* ix. 115 σοφίαι μὲν αἰπειναί.

surely than in Greek lyric song did nature need the assistance of art.¹

The popular theory of poetry as a divine possession perhaps owed its origin to the fact that direct revelation, in its most familiar form of mantic or oracular utterances, was conveyed in metrical language. The mystery of the poetic gift could best be accounted for by supposing that the poet was the inspired interpreter of the Muse as the Pythian priestess was of the Delphic deity. Pindar himself appropriates the mythological phrases: 'Utter thy oracles, O Muse, and I will be thy mouthpiece.'² It was but a coarse form of the inspiration theory which credited Aeschylus with composing his tragedies in a state of intoxication.³ In connexion with this bit of literary gossip Athenaeus records the saying attributed to Sophocles: 'You, Aeschylus, do the right thing, but without knowing why.'⁴ It is just this 'οὐκ

⁴ *εἰ καὶ τὰ δέοντα ποιῆς ἀλλ' οὐκ εἰδώς γε*.

εἰδώς' — the 'not knowing' — that Plato accentuates in various passages, in which, adopting the current theory of inspiration, he speaks in severe disparagement of poetry. 'The poet,' he says,¹ 'when he sits down on the tripod of the Muses is not in his right mind. Like a fountain he allows the stream of thought to flow freely, and, his art being imitative, he is often compelled to represent men under opposite circumstances, and thus to say two different things; neither could he tell whether there is any truth in either of them or in one more than in the other.' So in the *Apology*,² when Socrates goes to the poets and asks them the meaning of their own works, he finds them the most incompetent of all critics; they can give no rational account of what they have written. 'They showed me in an instant that not by wisdom do men write poetry but by a sort of genius and inspiration; they are like diviners and soothsayers who say many fine things, but do not understand the meaning

¹ Plat. *Laws* iv. p. 719 C.

² *Apol.* p. 22 A.

of them.' The poet, then, even when he speaks inspired truth¹ has no clear knowledge of the grounds of his beliefs; he may also speak inspired falsehood. At the best he attains to right opinion, which, however, falls far short of knowledge.

The popular conception of the poet as an inspired madman, destitute of art, who can compose nothing so long as he is in his senses, leads Plato to a slighting appreciation of the poetic gift. But there is another side to the case, and this is developed by him in the *Phaedrus*. If the popular point of view merely brings the poet and the philosopher into sharp antithesis, the kinship between them is marked by another and nobler view of poetry as a revelation to sense of eternal ideas. Poet and philosopher, each alike is lifted out of himself. In this state of 'ecstasy,' when the soul is possessed by a passionate yearning after truth—a divine enthusiasm—it recalls the celestial world whence it came and catches a glimpse of the invisible or ideal beauty, of which the

¹ Cp. *Laws* iii. p. 682 A.

Eleusinian mysteries are a faint type. For the poet, as for the philosopher, the highest inspiration comes from the spiritual insight gained in this moment of rapture. The faculty of reminiscence which makes this beatific vision possible is for Plato the common principle of philosophy and poetry. The poet is possessed by an imaginative enthusiasm that is akin to the speculative enthusiasm of the philosopher.

Poetry is thus a stage in the upward progress of the soul; it is the servant of philosophy whose truths it dimly shadows forth. When fully perfected it is absorbed in a philosophy which through the manifold things of sense ascends to that highest sphere, where truth and beauty are one with virtue. In the *Phaedrus* and the *Symposium* Plato passes beyond the poetry of his own age and prefigures an art which has been realised, if at all, in Dante, in whom the speculations of philosophy, the visions of the poetic imagination, and a devotion to beauty and goodness, are blended together in one mystical passion. It is a world whose secrets can be unlocked

only by those who like Plato and Dante are at once poets and prophets.

Plato's account of inspiration agrees in essentials with modern ideas. The metaphors in which he clothes his thought in the *Phaedrus* must not be allowed to disguise his true meaning. With him the inspiration of genius, whether poetic or philosophic, is not a direct revelation, operating as an influence from without, but one of the modes in which the soul puts forth certain divine powers inherent in her nature. These natural gifts, however, are quickened and kindled to higher activity. A new and rapturous energy springs up, inexplicable, unfamiliar, breaking in upon the monotony of common life. It achieves in a moment of insight what no effort of conscious thought can accomplish. The reason is not overpowered or the personality lost ; but the man's self is raised above the normal level. It is no longer the self of the working-day existence ; nor again is it an alien self ; it is the true and highest self in which the lower one is merged. Poetic inspiration even on this lofty view of it, does not

dispense with conscious art ; for the inspired moment often is but the sudden consummation of a long period of mental travail ; and, moreover, even after the creative idea has flashed upon the mind, a conscious and shaping process is needed to give it complete embodiment. On the other hand, no one can be admitted into the higher ranks of poetry who is devoid of the inspired faculty. The more or less, however, in the matter of inspiration is a difference of degree which almost amounts to a difference of kind ; and we commonly apply the term inspired only to those in whom the impression of spontaneous genius overmasters the impression of art.

Aristotle incidentally notes the difference between the two orders of poets : ‘ Poetry implies either a happy gift of nature or a strain of madness. In the one case a man can take the mould of any character, in the other he is lifted out of his proper self.’¹ The poet of the first

¹ Poet. xvii. 2 διὸ εὐφροῦς ἢ ποιητικὴ ἐστὶν ἢ μανικοῦ· τούτων γὰρ οἱ μὲν εὐπλάστοι οἱ δὲ ἐκστατικοί εἰσιν. All MSS. but one have ἐξεταστικοί : but see S. H. Butcher, *Aristotle's Theory of Poetry and Fine Art*, third ed.

class is a man of flexible genius, with keen and versatile intelligence, with a delicate power of seeing resemblances.¹ He is quick to receive the impress of another personality, and to enter dramatically into another's feelings. Contrasted with him is the poet who is touched with a fine frenzy, possessed by an inspiration or enthusiasm in virtue of which he is 'ecstatic'; he is readily lifted out of himself and loses his own personality. The *εὐφροσύνη* here is marked off from the *μανικός* by a more conscious critical faculty. As examples of the two contrasted types, one might suggest Sophocles and Aeschylus, Bacchylides and Pindar, Dryden and Marlowe, Beaumont and Fletcher, M. Arnold and Blake. The contrast drawn by Aristotle is not expressed in such precise form in any previous writer, but the distinction was constantly present to the mind of Plato; it is developed and illustrated from many points of view in the treatise *On the Sublime*; and indeed the idea is at the very basis of that

¹ Cp. *Poet.* xxii. 9 where command of metaphor (*τὸ μεταφορικὸν εἶναι*) is *εὐφύιας σημείων*; and the making of good metaphors is *τὸ τὸ ὅμοιον θεωρεῖν*.

treatise. The supreme excellence which the author means to convey by the term ὕψος, including not only sublimity in our sense, but elevation of tone, a glow of imagination, a grandeur of style, is the distinguishing mark of the inspired writer. He is raised into a higher plane under the influence of noble emotion, and produces on his hearers the effect not of persuasion but of 'transport' (ἔκστασις).¹

The examples given are not only passages in the poets, such as the prayer of Ajax in the *Iliad*—ἐν δὲ φάει καὶ ὄλεσσον, 'Destroy us but destroy us in the light,' or Sappho's great ode φαίνεται μοι κῆνος, but passages from Demosthenes, such as that containing the famous oath in the speech *On the Crown*—μὰ τοὺς ἐν Μαραθῶνι προκινδυνεύσαντας,—and the words of the *Book of Genesis*, 'God said, Let there be light: and there was light.' Demosthenes is cited as the master of such emotional effects. He may lack the fluent ease, the

¹ Longinus *De Subl.* c. i. 4 οὐ γὰρ εἰς πειθῶ τοὺς ἀκρωμένους ἀλλ' εἰς ἔκστασιν ἄγει τὰ ὑπερφινᾶ. Cp. iii. 5 ἐξεστηκότες πρὸς οὐκ ἐξεστηκότας.

urbane and piquant charm of Hypereides, but his 'heaven-sent gifts' (θεόπεμπτα δωρήματα) leave him supreme above all rivals : 'he silences by his thunders and blinds by his lightnings the orators of every age. One could sooner face with unflinching eyes a descending thunderbolt than meet with steady gaze his bursts of passion in their swift succession.'¹ Yet the final lesson to be gathered from the eloquence of Demosthenes is, as Longinus observes, that 'even in the revels of the imagination sobriety is required.'² Here we have the true Hellenic note. Speeches which are alive with the fire of passion have been laboriously prepared in the closet. We never lose the impression of severe and disciplined strength. In his highest outbursts of eloquence Demosthenes still owns the sway of reason. 'It is not possible with him, as with lesser orators, to map out a speech into parts and say here is an appeal to feeling ; here is pure reasoning ; for thought is

¹ *De Subl.* c. xxxiv. 4 ὥσπερ εἰ καταβροντᾷ καὶ καταφέγγει τοὺς ἀπ' αἰῶνος ῥήτορας κ.τ.λ. (Trans. H. L. Havell, Macmillan and Co.)

² *Ib.* c. xvi. 4 διδάσκων ὅτι κὰν βακχεύμασι νήφειν ἀναγκαῖον.

everywhere interpenetrated with feeling ; reason is itself passionate. What fuses all into unity is the force of an intense personality, which cannot convince the intellect without kindling the emotions.’¹ The eloquence of Demosthenes is the eloquence of impassioned reason. The inspired orator is also the cool thinker and the consummate artist. A somewhat analogous fact meets us in the Sophoclean drama. In the very height of tragic suffering the actors are masters of themselves ; their vision is undisturbed, their judgment unclouded. They reason and reflect on what they have done. They place themselves in the attitude of criticism. Out of the depth of their anguish they seem to gain a heightened intellectual force, a more penetrating insight. When we are dealing with Greek literature we must beware not to separate too sharply thought and emotion, reason and inspiration.

Aristotle’s distinction between the inspired poet and the finely gifted artist admits of rarer, or at least less striking, illustration from Greek

¹ S. II. Butcher, *Demosthenes*, p. 159.

than from modern literature. The imaginative creations of the modern world seldom unite in anything like equal proportions the twofold elements of art and inspiration. In Greek poetry these qualities are not often present in so disparate a form as to affect the general sense of harmony. Sometimes indeed the impression of inspired faculty, of original genius, in Greek poetry is a little obscured by the other impression of poetic art obeying the strict rules of a code. We take account of the conventional elements; we note also the narrow range of poetic subject-matter; and we are in danger of forgetting that genius often lies in creating much out of little; that it wins its most signal triumphs from the very limitations within which it works. Again, the Greek perfection of form may itself lead moderns, who are imbued with the spirit of romantic literature, to under-rate the original power which underlies such art. Genius, poetic inspiration, at once suggests—and truly suggests—to our minds a welling up of thought and feeling, an effortless and spontaneous energy, a sudden inrush

of new emotion as the creative idea rises into consciousness. Aeschylus, we readily say, is an inspired poet, one who thinks in images, who sees intuitively where another reasons. We recognise in him the fervour of the prophet, whose words, instinct with passion, struggle to express thoughts which transcend the expressive capacity of speech. No wonder that the utterance is often rugged and inartistic. We are fain to believe that we see the workings of a hidden self, whose processes are higher than those of our normal intelligence, and whose swift insight discerns the way to its artistic result without employing the common logical links of thought. The saying ascribed to Sophocles, which has been already quoted, returns to our mind :—‘You do the right thing, but you do it without knowing why.’

Yet this is a one-sided judgment. Aeschylus the inspired thinker is at the same time a great artist. And, similarly, Sophocles the conscious artist is none the less an inspired poet. If there is more of grandeur and mystery, a larger output of imaginative ideas in Aeschylus, there

is more of a beauty which is itself an inspiration in Sophocles. It is a beauty of the distinctively Greek order, which results not from any sum of effects but from a harmony of effects, from a network of delicate relationships, from the subordination of the parts, and their convergence on a single end. It is a quiet unobtrusive beauty, in which the total impression is one of simplicity so perfect that it must needs be the product of consummate art. But a modern reader on first acquaintance with a play of Sophocles may well fail to realise that the constructive power which is capable of fashioning such a whole itself implies inspired insight, imaginative vision of the highest order. We are perhaps inclined to rate too low the genius which is displayed in the general structure of an artistic work ; we set it down merely as the hard-won result of labour, and we find inspiration only in isolated splendours, in the lightning flash of passion, in the revealing power of poetic imagery. The study of Greek literature leads us not indeed to undervalue these manifestations of genius, but to view all partial beauties in

their relation to the whole. The supreme result which Greek thought and imagination achieve by their harmonious co-operation is the organic union of the parts. In the East the poetical way of seeing things is that of direct intuition. The East knows nothing of the dialectical workings of the mind. The service Greece rendered lay in establishing the balance between these faculties. The emotional and intellectual fields are no longer kept apart. Reason and intuition enter on a new alliance. Greek artists and poets have not indeed, like Mozart or Wordsworth, left us any psychological account of the processes of their own creative activity ; and indeed the detailed working of these processes is generally hidden from the man of genius himself. In any case, it would be a bold critic who would attempt to define in any great imaginative composition the part played by an instinctive or emotional element on the one hand, and by logical thought on the other.

But though we cannot say precisely how the synthesis is effected in the mind of the creative artist, we may safely apply a critical analysis to

the completed work of art. It matters not whether some idea, to which the critic has been guided only by a chain of reasoning, was flashed instantaneously on the artistic vision. The interest of the analysis in the case of Greek art and literature is this—that the parts are discovered to be bound together by an inward, and assuredly not an unconscious, logic. Especially in architecture and the drama we can trace the subordination of ideas. There is no room here for caprice or happy accident. The elements of thought and feeling, of reason and imagination have been fused together not in any dim-lit region of sub-conscious thought. The unified and artistic whole has been born in the upper air ; it follows the laws of the universal reason. ‘There is not a single effect which if not reasoned is not at least reasonable.’¹ Moderns are prone to believe that the action of poetic genius is purely instinctive or intuitive, and that genius abdicates its rights and descends to the lower level of talent when it begins to reason. Greek literature decisively refutes such

¹ *Le Parthénon*, E. Boutmy, p. 201.

a notion. It exhibits the critical faculty as a great underlying element in creative power. The analytic spirit of Aristotle's *Poetics* is not to be explained solely by a certain prosaic vein in the mind of the philosopher. It is distinctive of a race whose highest flights of imagination are controlled by reasoned principles of art, and whose creative work cannot be disjoined from the dialectic effort of thought.

The union of contrasted qualities which we have been considering in the special field of imaginative production is but one example of a characteristic, which more eminently perhaps than any other, constitutes the originality of Greece. We trace it in Greek life as well as in Greek literature, in the impressive personalities who stand out not only as actors in Greek history, but also as writers and thinkers. In the history of Rome the man is often sunk in the Roman; his features are in low relief; we are led to forget the individual in the type. In Greece great personalities, with an ineffaceable stamp of their own, are far more numerous—men not only great in the things which they

accomplished, but interesting in themselves, in endowments of mind and force of character, in the union of many outwardly discordant gifts—idiosyncrasies, it may be, but the idiosyncrasies of genius. Illustrations might be drawn from all branches of Greek literature and from all periods; I will confine myself to a rapid glance at that early period, the sixth to the fifth century B.C., before poetry was severed from philosophy or philosophy from science; when thought and action were not yet divorced; when specialised knowledge and pursuits had not limited, and in limiting, also obscured the wonderful variety of powers residing in the gifted individual of the Hellenic race.¹

We recall first Thales of Miletus, in the beginning of the sixth century B.C., the earliest of Greek philosophers, a man of science, a mathematician, one of the founders of the deductive Greek geometry, an astronomer who predicted the total eclipse of the sun which occurred in the war

¹ The philosophers, whose names are here selected for purposes of illustration, are, among others, brilliantly handled by Gomperz, *Greek Thinkers*, vol i. (Trans.).

between Lydia and Media on May 28, 585 B.C.—a memorable prediction, the first of the kind recorded in European history¹—one whom tradition remembered as the typical philosopher who tumbled into a well while gazing at the stars.² But he was also a traveller, a shrewd man of business, who turning to account his meteorological researches is said to have made the first ‘corner’ in oil;³ a politician, moreover, of singular insight, who, if we may believe Herodotus, advised his Ionian fellow-countrymen to form a federal state with its capital at Teos as a protection against Persia.⁴

Or, again, take Xenophanes of Colophon (flor. *circ.* 545 B.C.), the founder of the Eleatic school of philosophy, who at the age of twenty-five was driven from his Ionian home by the Persian invasion, and for nearly threescore years, by the testimony of his own verses, ‘tossed his troubled thoughts up and down

Hellas';¹ a rhapsodist and a wandering philosopher, attended by a slave who carried his cithara. In the course of his travels he made valuable scientific observations. He was the first who pointed to the fossil remains of plants and animals as proofs of the great changes that the earth must have undergone in the remote past. He broke sharply with the traditions and beliefs of his people. He is a satirist who does not spare any of the institutions of Hellas—the athletic games of Olympia any more than the unimproving conversation of the dinner table. But it is as a religious reformer that he utters his deepest convictions. He passes scathing criticism upon the beliefs of polytheism. His passionate verses, introducing the first note of discord between polytheism and philosophy, echoed in the ears of the Greeks throughout their history, and are again overheard in the final conflict between the de-

¹ Xenoph. Fr. 24 :

ἤδη δ' ἐπτά τ' ἔασι καὶ ἐξήκοντ' ἐνιαυτοὶ
βληστρίζοντες ἐμὴν φροντίδ' ἀν' Ἑλλάδα γῆν.

The word βληστρίζω is used in Hippocrates for tossing on a bed of sickness.

fenders of expiring paganism and the Christian apologists.

Let us pass to another man even more remarkable, a poet-philosopher of brilliant genius, Empedocles of Agrigentum, of Dorian not Ionian race, some features of whose character are singularly un-Hellenic, though none but a pure Hellene could have written the noble hexameters of which some five hundred are extant. His poem *On Nature* was one of the books which inspired Lucretius, whose magnificent eulogy every one will remember.¹ As poet and physicist, with a wide outlook into the universal life of things, Empedocles traced a unity running through all natural and spiritual processes. He made original observations on physiology, ingenious experiments illustrating some laws of physics; he threw out hints of the doctrine now known as natural selection, and anticipated some great discoveries of modern chemistry.² He was a practical physician and sanitary engineer as well as a

biologist, and by draining the marshes rid the city of Selinus of a pestilence. No ancient philosopher of whom we read took such a leading part in public life; he was the eloquent champion of the democracy and was offered and refused the kingship.¹ Aristotle tells us that he was also the founder of the art of rhetoric; and Gorgias of Leontini was said to be among his pupils.²

But there was also another side to him. He was a seer, a mystic, a healer of the maladies of the soul as well as of the body, the author of purificatory chants of which fragments survive. In outward demeanour he resembled the wonder-worker from the East rather than the sober Hellene. Clad in purple robe, with a Delphic wreath on his head and a golden circlet about his brows, his long hair flung loose, with grave set features he was borne in pomp through Sicily, the children flocking to his car, and the townspeople greeting him in his progress.³ He is

by his own description a spirit in exile,¹ one of those heavenly beings, who for crime done in another life are doomed 'to wander for thrice ten thousand years away from the Blessed,' tossed from sea to sky, from earth to sea,

and who returns
Back to this meadow of calamity,
This uncongenial place, this human life,—²

the 'unlovely land,' 'the unfamiliar region.' Nor can the disinherited spirit regain his birth-right except by long and rigorous discipline and suppression of the senses. But I cannot linger over this strange, this unique figure in Greek speculation, in whom mysticism and science, intuition and logic, religious exaltation and practical capacity, the humility of a sin-laden spirit and the boundless pretensions of a charlatan were united to form so baffling a compound. To this day in Girgenti, that memorable city, where rows of ruined temples guard the southern slopes of the acropolis, stretching towards the sea, Empedocles is a

¹ Καθαρμοί, line 12, φυχὰς θεβθεν καὶ ἀλήτης.

² Matthew Arnold, *Empedocles on Etna*.

name of power ; he is the idol of his fellow-countrymen ; legend and history still cluster round him.

I will but remind you of one other name—the founder of the famous Pythagorean brotherhood, which formed a close intellectual and spiritual partnership whose aim was the ennobling of the whole life, public and private, of its members. Pythagoras himself was a mystical theologian and at the same time an original mathematician ; an astronomer who showed that the earth is spherical ; a musician who made a brilliant discovery in the theory of sound ;¹ a man of genius who, like Socrates, committed nothing to writing—from mistrust, it would seem, of the written word ; but whose personal influence so lived in the school as to leave an abiding mark on speculative thought long after the brotherhood itself had been dissolved by the violence of political faction.

What is it that constitutes the striking and original quality of such characters — of the physicist who is also a merchant ; the religious

¹ Gomperz, i. 102 (Trans.).

reformer, who is at once minstrel, poet, and man of science; the practical engineer who has the soul of a mystic; the mathematician who is the head of a semi-religious order? The secret lies in the harmonious blending of opposites. Such contrasts are not indeed confined to Greece; but elsewhere they are rare phenomena: in Greece these, or other not widely dissimilar combinations, are part of the normal psychology of those original minds that have left their stamp upon the intellectual life of Europe. We see in them the conjunction of a rich, an inexhaustible imagination with a keen critical faculty, a restless, wondering, questioning spirit, fearless of consequences, bringing all things to the test of reason. We see also a generalising power, constructive and masterly, but apt to be over-hasty, balanced however and corrected by a faculty of subtle analysis and a delicate eye for differences in detail. Again, we observe the love of pointed antithesis, visible in the very structure of the sentence and form of the thought, in philosophical conceptions (*e.g.* unity and plurality,

finite and infinite, Being and not Being, rest and motion, etc.), in the 'balanced and contrasted groups of character within the drama.

Yet, quick as were the Greeks to discern antagonisms in the world of nature or of man, it was also the conscious effort of Greek philosophy to reconcile the discordant principles, to build the bridge by which thought might travel across the gulf, and so by a finely graduated series of transitions to restore the broken unity. Heraclitus of Ephesus (born probably about 540 B.C.), anticipating a fruitful idea of modern philosophy, laid down the law of the harmony of contraries, of identity in difference. Contraries do not exclude, but rather presuppose one another; nay, each passes imperceptibly into the other. 'The dissonant is in harmony with itself.'¹ 'The invisible harmony'—which lies behind the contradictions of sense—'is better

¹ Heracl. Fr. 59 [10] *συμφερόμενον διαφερόμενον, συναῖδον διαῖδον*. Cp. 46 [8] *τὸ ἀντίξουν συμφέρον, καὶ ἐκ τῶν διαφερόντων καλλίστην ἁρμονίαν*. 45 [51] *οὐ ξυνίασι ὅπως διαφερόμενον ἐωυτῷ ὁμολογέει*.

than the visible.’¹ It is interesting to reflect that one of the last of the Greek philosophers, Plotinus (born 204 A.D.), joins hands with Heraclitus, applying the same principle to illustrate the harmony of contrasted elements in a work of art, and especially in the drama.² The ‘rational principle of the drama is a unity’ of action, ‘containing in it many collisions,’³ and out of this play of contraries is evolved the harmony of the whole. So too, he argues, in the drama of life where the soul is the actor, the universal reason, presiding over the struggle, resolves the dissonance and discord in a final harmony. Heraclitus had already grasped the truth of Western civilisation, that the struggle of opposing forces—his metaphorical ‘warfare’ (πόλεμος)—is the condition of progress, and that this holds good in human society no less than in the evolution of the cosmic order. This profound philosophic truth the Greeks applied instinctively in prac-

¹ Heracl. Fr. 47 [54] ἁρμονίη ἀφανὴς φανερῆς κρείσσων.

² Plotin. *Enn.* iii. 2. 11 ff.

³ *Ib.* iii. 2. 16 δράματος λόγος εἰς ἕχων ἐν αὐτῷ πολλὰς μάχας.

tical life. In politics they never fell under the fanatical sway of any single principle—not royalty, not aristocracy, not democracy. Here too they sought to discover the harmony of opposites. The friction and play of contending forces were needed, they felt, alike for stability and development. The State and the Individual, Order and Progress, Necessity and Freedom—these permanent antagonisms of thought, were not left, as they were in the East, to confront one another in hostile isolation. The contradictions, if not solved, were at least softened. Nowhere more than in her colonial life, in those busy and rival centres of intellect and commerce, did Greece exhibit her versatile power of reconciling things not previously combined. The new experiments struck out in art, in philosophy, in social and political organisation, involved a kind of mediatorial process. They were the product of a spirit of adjustment, balance, compromise. They are the creation of the Western mind.

The temperament of the people as a whole is a compound as remarkable as are the gifts

united in the great men of the race — a people shrewdly practical yet sternly idealistic ; jealous of alien influences yet hospitable to foreigners ; intolerant of unorthodoxy yet ready to laugh over their own pantheon ; slaves to party spirit yet gifted with a singular faculty of political compromise ; endowed with a proverbial gaiety of heart, which blends, however, with a sadness sometimes bordering on pessimism. The diverse and seemingly opposite qualities which mark the Greek mind are one secret of its matchless force, and the cause of its success in so many fields of human activity, practical and speculative. They constitute the chief reason why Greek literature speaks in so many voices, and utters its appeal to every race and generation in its turn. Hence comes its wealth of suggestion, its recuperative energy, its power of perpetual adaptation.

V

GREEK LITERARY CRITICISM¹

IN devoting two lectures to a subject which extends over seven or eight centuries and carries us from the fifth century B.C. far into the Christian era, I propose to restrict myself to a few authors and a few points of interest.

¹ In preparing these somewhat desultory discourses (V. and VI.) I have had in mind the fact that Professor Saintsbury's *History of Criticism* (Blackwood and Sons) has now placed in the hands of English readers a systematic treatment of the whole subject. I have, therefore, confined myself to following out a few trains of thought which seemed to fall in with the general scheme of this volume. Some excuse is needed for passing so lightly over 'Longinus' *On the Sublime* (περὶ ὑψους), a critical essay of unique value and interest. The truth is, it would not be easy to add much to the admirable appreciation contained in Professor Saintsbury's chapter (vol. i. pp. 152-173) and to the handling of the treatise by Professor W. Rhys Roberts in his edition (Cambridge University Press).

The treatment will necessarily be discursive and the order not always chronological. But it may be convenient so far to follow the lines of historical development as to include in the first part of our survey mainly the criticism of Poetry, in the latter part, the criticism of Prose.

Literary criticism in Greece as a distinct and conscious art was late in its appearing. The period of creative activity was, it is true, a period also of varied critical reflection both in art and literature ; and here and there we come across writers of original genius who were critics of their own craft or of that of others. But these are rare exceptions. It is not till the time of Aristotle that we find any systematised discussion on works of literature, or on the principles that govern the literary art. Professed critics—men who write books on other books—were still unknown. The essay, the monograph, the literary study of a particular author, are a product of the post-classical age, when the centre of Greek civilisation had been shifted, and Hellenism

had found a new abode first at Alexandria, and afterwards at Rome. With the 'reviewer' in the modern sense the Greek world never became acquainted.

In the poetical schools of Greece reflection had been at work and discussion rife for centuries before the Periclean era. Between master and pupil there was a constant and oral interchange of ideas. Theory and practice went hand in hand. Criticism was as yet from within; it was, as we might say, the criticism of the workshop or the studio. Such, for instance, is the advice given to Pindar by Corinna, the Boeotian poetess: 'Sow with the hand, not with the sack.'¹ Here we have the principle of artistic parsimony, the law of reserve, the truth expressed by the Greek proverb, 'The half is greater than the whole.' In such an atmosphere of teaching and learning poetry grew up. Literary forms or types were created — epic, lyric, dramatic,

¹ Plut. *De Glor. Athen.* c. iv. p. 347 τῇ χειρὶ δεῖν σπείρειν ἀλλὰ μὴ ὅλῳ τῷ θυλάκῳ. For other examples see W. R. Hardie, *Lectures on Classical Subjects* (Macmillan and Co.), pp. 266-269.

elegiac—which have stood the test of time and become the accepted models of the Western world. Behind the activity of creative genius a ceaseless critical effort was at work, controlling and inspiring poetic invention. Standards of writing were formed, canons of taste laid down, and the great problem of reconciling tradition with freedom of development was in process of solution. Meanwhile the variations of literary type answered to the living forces operating in society. The poets followed close upon the movements of the race and the people. Their ‘invention,’ their originality, consisted chiefly in vitalising old material, in interpreting the legends in the light of the present, in re-creating and ever renewing the marvellous history of the past. To make old things seem new and new things seem familiar, was one main function of their art. Viewed in this light the critical faculty of the Greeks stood nearer to the creative imagination than moderns can easily realise. The fine gift of discrimination, the instinct of omission and rejection, the power of seizing in their own

mythology the facts which had in them the kernel of poetic truths—all this formed part of the poetic equipment of the race.

In the Periclean age this creative, or re-creative, function of poetry was fulfilled more especially by the tragic drama. But what form did dramatic criticism take? Professional critics as yet there were none: but we must not infer that there was no effective criticism. The Athenians were 'nothing if not critical'; and never probably at any epoch of history were literary productions brought so directly to the bar of public opinion; a public opinion, too, that was in a sense the verdict of the State. If literary judgments were not passed daily or weekly, the decision was but the more authoritative when it came. At Athens the dramatic competitions were held twice a year, at the two great festivals of Dionysus. The judges—five in number for comedy, and probably the same number for the tragic contests—acted under solemn oath as in a court of law. They were appointed with elaborately devised precautions to secure an impartial verdict. These

anonymous umpires were chosen by ballot from a select list, and their names divulged only after the award. A defeated competitor might question the fairness of their award by instituting a prosecution, and the case would then be tried before a popular tribunal. In our own day we have seen actions for libel brought against dramatic critics: we should like to be better informed as to how a similar prosecution was conducted at Athens. We read indeed of some strange results in these competitions; the defeat, for instance, of the *Oedipus Tyrannus* of Sophocles (the play which Aristotle regarded as the model of dramatic construction) by an obscure poet Philocles, the nephew of Aeschylus. Still more unaccountable in the next century was the poor success that attended Menander, who exhibited 108 comedies, but was only eight times victorious. Yet in most instances our surprise would probably be lessened if we were in possession of all the facts—if the competing plays were extant for comparison, and if, moreover, we could estimate the other factors which both in Tragedy and the Old Comedy

counted in the award—the singing, the dancing, and the choral equipment.

We hear of but few protests against the verdict of the judges. In Greece at large the Athenian judgment on tragedy seems to have been accepted as final. To Athens the tragedian looked for his credentials; it lay with her to set the seal of her approval on his art. The testimony of Plato on this head¹ agrees with the view ascribed to Aeschylus in the *Frogs*, that ‘the rest of the world,’ compared with them ‘were mere trash at judging the poetic faculty.’² He himself, it is true, had to wait fifteen years before he won success; but having done so, he retained his supremacy to the end; and at his death poetic privileges, of a kind then unique, were conferred on him.³ Sophocles, in like manner but without pre-

¹ *Laches* 183 A-B.

² *Frogs* 809-810:

λήρον τε τᾶλλ’ ἡγείτο τοῦ γινῶναι πέρι
φύσεις ποιητῶν.

³ The Athenians passed a special decree permitting his tragedies to compete at the Dionysia after his death; Schol. on *Frogs*, 868:

ὅτι ἡ πόλις οὐχὶ συντέθνηκέ μοι.

liminary failures, during a literary career of about sixty years, held an almost undisputed sway. And yet there is no trace of either of these great masters ever having lowered his art to satisfy a vulgar taste. They were able to lift their hearers to their own high plane of thought and imagination. It was an unparalleled achievement. The themes handled were such as demanded and received ideal treatment. The theatre was of colossal size ; the audience a vast one, far outnumbering the gatherings of the assembly or the law-courts ; it comprised every grade of culture and ignorance, though the men of culture formed but a small minority. If Euripides fared less well at the hands of his countrymen — his victories amounting in all only to five — we must remember that he generally competed against Sophocles. After his death the balance was redressed ; a great and growing enthusiasm for him set in ; due, we may suspect, not less to the love of rhetoric which had overspread the Greek world than to his genius, which at first had been somewhat underrated. Be that as it may, the critical

instinct of the public and the sureness of their literary perceptions in the fifth century is on the whole a fact as certain as it is significant.

A contemporary judgment is often reversed by posterity; examples are afforded by the literary history of almost every nation. But Time, to which Aeschylus is said to have dedicated his tragedies,¹ has not only ratified his particular claim, but in well-nigh every department of poetry, has endorsed the verdict of Athens. Aristotle had good grounds for the opinion he held as to the critical value of popular taste. While laying emphasis on the mixed elements of refinement and vulgarity of which an audience is composed,² he still maintains that the collective judgment of the many in æsthetic matters is superior to the judgment of any single individual.³

¹ Athen. viii. 39 χρόνῳ τὰς τραγωδίας ἀνατιθέναι.

² *Ibid.* v. (viii.) 7. 1342 a 18-22 ἐπεὶ δ' ὁ θεατῆς διττός, ὁ μὲν εἰσέλευτος καὶ πεπαιδευμένος, ὁ δὲ φορτικός κ.τ.λ.

³ *Ibid.* iii. 11. 1281 a 42 ff., esp. 1281 b 8-10 διὸ καὶ κρίνουσιν ἄμεινον οἱ πολλοὶ καὶ τὰ τῆς μουσικῆς ἔργα καὶ τὰ τῶν ποιητῶν· ἄλλοι γὰρ ἄλλο τι μόριον, πάντα δὲ πάντες. Cp. 1282 a 1-21, and

And we can to-day observe that what often distinguishes the verdict of an intelligent public from that of the expert critic, is a swift and immediate impression which embraces the whole instead of accentuating the parts.

Plato would not have agreed with Aristotle's view. The supreme test of artistic excellence is, he holds, the pleasure afforded to 'the one man who is pre-eminent in virtue and education.'¹ He contrasts his own age with earlier times. The judges, he says, have now fallen under the dominion of the audience;—and he coins the word *θεατροκρατία* to denote this idea. Instead of instructors they have become the pupils of the crowd. They have yielded to the clamour of the theatre: and the poets in turn, infected by their corruption, are obliged to humour a degenerate public.² It is indeed probable that popular taste underwent some weakening in the fourth century. But the contrast as drawn

iii. 15. 1286 a 30 διὸ καὶ κρίνει ἄμεινον ὄχλος πολλὰ ἢ εἰς ὁστισοῦν.

¹ *Laus* ii. 659 A ἕνα τὸν ἀρετῇ τε καὶ παιδείᾳ διαφέροντα.

² *Ib.* ii. 659 A—C, iii. 700 C—701 A.

by Plato is surely overstated. The drama has been truly called the most democratic of the arts;¹ and in every age when it has been a living force, the influence of the audience has been powerfully felt. We cannot doubt that in the fifth as in the fourth century the voice of the people must often have decisively affected the award of the judges.

The influence of the audience on the poet is one of the points of dramatic criticism which is touched on in the *Poetics*.² The question as to the proper ending of tragedy seems to have been debated at the time in literary circles. Aristotle pronounces in favour of the unhappy ending, the other kind being, as he thinks, appropriate only to comedy, where the bitterest enemies walk off hand in hand at the close,—‘no one slays or is slain’; or, as Goethe says, ‘no one dies, every one is married.’ But even

¹ Brander Matthews, *The Development of the Drama* (New York), p. 33. This volume traces in a very interesting way the influence which the audience, the actors, and the size and construction of the theatre exert on the form of the drama.

² *Poet.* xiii. 6-8. See Butcher, *Aristotle's Theory of Poetry and Fine Art* (third ed.), p. 305 ff.

in tragedy, Aristotle observes, the happy ending is commonly preferred 'owing to the weakness of the audience' (διὰ τὴν θεάτρων ἀσθένειαν). People are not robust enough to endure the painful conclusion; so the poet against his better judgment yields to the liking for melodrama. 'We have all,' as some one has said, 'a secret *penchant* for false sentiment.' The craving for 'poetic justice,' the morbidly moral desire to make things come right on the stage, all the more because they are so apt to go wrong in life, is only one example of an instinct, amiable but prosaic, to which the play-going public is always liable.

Criticism in the form of public opinion, direct and effective as it was at Athens, is not in strictness literary criticism. Literary criticism proper spoke for the first time through the lips of comedy. Unlike tragedy, comedy in the fifth century B.C. had its life in the present; it reflected the spirit of the day; its allusions were local; its topics were current events, politics, literature. The comic poet was not only author, stage-manager, ballet-

master, musician, and sometimes actor, but wielded an office which combined in some degree functions similar to those exercised by *Punch*, the old *Saturday Review*, and the Comic Opera. As an organ of literary criticism the Aristophanic comedy dealt mainly with the productions of the tragic stage. Nor was it enough for the comic poet to be witty or scathing; as a critic of poetry he must himself be a master of the poetic art, and able to hold his own beside the great tragedians themselves. In the *Frogs* of Aristophanes, Aeschylus and Euripides, as rival candidates for the throne of poetry, are placed upon the stage. Each argues his own cause and caricatures the manner of his opponent. It is the earliest instance we possess of literary criticism in the form of parody, and probably the most brilliant example of the kind in all literature. In this as in other plays Aristophanes vindicates his claim to be a critic by proving himself a consummate craftsman in every style of poetic composition; while in lyrical utterance, his notes are among the

purest and most melodious that have flowed from any Greek singer.

We cannot here discuss the justice of the Aristophanic criticism or the value of his reflections on the art of poetry. But two observations may be made in passing. First, in the linguistic attacks made on Euripides he touches with playful irony that love of verbal subtlety, of fine-drawn distinctions, the

Quibbling, counter-quibbling, prating,
Argufying and debating,

to which the Greeks were always addicted, and which, when the genius of the race was exhausted, ended in the arid disputations of Byzantine schoolmen. Secondly, Aristophanes is still at the standpoint of the early Greek world ; he assumes that poetry has a didactic aim ; the poet is the moral teacher of the community, the educator of grown men ; it is he that inspires them with courage and civic loyalty :

Children and boys have a teacher assigned them,—
The bard is a master for manhood and youth,

Bound to instruct them in virtue and truth,
Beholden and bound.¹

These words are put into the mouth of Aeschylus. But they are tacitly accepted by Euripides, who admits the duty of good counsel (*χρηστὰ λέγειν, χρηστὰ διδάσκειν*), merely insisting that it should be conveyed 'in the language of men' (*ἀνθρωπείως φράζειν*), not couched in the grandiloquent style of his rival. Already the question had been put to him :

Tell me then what are the principal merits
Entitling a poet to praise and renown ?

and he had replied :

The improvement of morals, the progress of mind,
When a poet by skill and invention
Can render his audience virtuous and wise.²

By Euripides' own confession it is the glory of poetry that it 'makes men better'; though,

¹ Frere's Trans. of *Frogs* 1054-1056 :

τοῖς μὲν γὰρ παιδαρίοισιν
ἔστι διδάσκαλος ὅστις φράζει, τοῖσιν δ' ἡβῶσι ποιηταί.
πάνυ δὴ δεῖ χρηστὰ λέγειν ἡμᾶς.

² Frere's Trans. of *Frogs* 1008-1010 :

ΑΙΣ. ἀπόκριναί μοι, τίνος οὐνεκα χρή θανμάζειν ἄνδρα ποιητήν ;
ΕΥ. δεξιότητος καὶ νοιθεσίας, ὅτι βελτίους τε ποιοῦμεν
τοὺς ἀνθρώπους ἐν ταῖς πόλεσιν κ.τ.λ.

doubtless, the phrase would not bear quite the same meaning to him as to Aeschylus. And if the citizens, once good men and true, have been debased by him, he deserves, Dionysus says, 'to die'; and he himself does not dissent. This attitude of mind was at once the strength and the weakness of Greek poetical criticism: its strength because it kept alive the idea that art and poetry are not merely the private delight of the individual; they belong to the community; they are the expression of its moral and spiritual life: a source, again, of weakness, inasmuch as the poets came to be thought of as moralists. They were expected to yield edifying lessons outside their art; and if their utterances could not be wrested to the desired end, adverse sentence was too often passed upon them.

The vein of parody which runs through the Aristophanic drama and appears to have been a marked feature of the Old Comedy, was imitated and developed in the next generation. For sixty or seventy years after the death of Aristophanes comedy was a frequent

vehicle of indirect literary criticism. The interest, however, of these later *jeux d'esprit*, so far as we can judge from the surviving fragments, lies less in their suggestive or critical value than in the acquaintance they seem to imply on the part of the audience with the poetical literature of Greece. Tragedians and lyrical writers all came under contribution. Whole scenes from tragedy were travestied. The manner or diction of particular authors was reproduced. Quotations and reminiscences were strewn broadcast through the plays. The popular love of literary parody, combined with certain compliments (surely half ironical) addressed to the audience by the comic poets, has led some scholars to infer the existence of a large reading public at Athens in the fifth and fourth centuries B.C.¹ The evidence, however, is far from supporting this view. Actual illiterates, doubtless, were rare. But there is a great

¹ E.g. *Frogs* 1109-1118: esp. 1114:

βιβλίον τ' ἔχων ἕκαστος μανθάνει τὰ δεξιὰ,

where βιβλίον seems to be the 'libretto' or book of the words.

array of facts to show that the bulk of the people can have had little or no direct acquaintance with books. And not only was there no diffused literary culture in the stricter sense, but the mass of the audience at the theatre were not even familiar with their own mythology. There is a startling sentence in the *Poetics* which is too explicit to be set aside: 'The known legends are known only to a few.'¹

So far as the audience were acquainted with tragic poetry, it was from stage representation, not through reading. Yet we cannot on that account assume any lack of a literary sense. Indeed, it is probably true that under certain conditions, an instinctive good taste, which has been cultivated by listening to oral literature, is merely deadened or impaired by book learning. In any case, at Athens, however narrow may have been the range of their culture, the people had an exquisite feeling for words and appreciation of the musical capacities of speech. When Gorgias made

¹ *Poet.* ix. 8 ἐπεὶ καὶ τὰ γνώριμα ὀλίγοις γνώριμά ἐστιν ἀλλ' ὁμῶς εὐφραίνει πάντας.

his first appearance among them, we are told that the striking novelty of his diction came with a pleasurable shock on the sensitive ears of the audience.¹ In political debate and in the administration of justice this æsthetic sensibility was a danger of which the Athenians themselves were aware; and it would seem that there was a special nickname for persons who were thus fooled by the pleasure of the ear.² But a fine and trained instinct for language was the very condition which made it possible for the average Athenian, unversed in books, to become a capable critic even of the higher poetry. Add to this a marvellous alertness of mind, a power of catching a point or seeing an allusion, which is vouched for by the most various testimony, and which justified Demosthenes in declaring: 'No people

¹ Diodor. xii. 53 καὶ τῷ ξενίζοντι τῆς λέξεως ἐξέπληξε τοὺς Ἀθηναίους ὄντας εὐφρεῖς καὶ φιλολόγους.

² See Eustath. 1522, 26 "ὦ μόνον ὦτοι τῶν Ἑλλήνων" (a quotation from comedy), and the explanation 1687, 60 οἱ ῥῶον ἐπὶ τοῦ τυχόντος ἐξαπατῶμενοι ὦτοι ἐλέγοντο, προσφνέστερον δὲ ἂν ὦτοι καλοῖντο οἱ ἐκ μῶνης ἀκοῆς ἀπεριέργως καὶ ἀνεξετάστως ἀπάτην πάσχοντες. The word meant literally a 'horned owl,' hence a 'booby.'

is so quick at taking a speaker's meaning.'¹

With such intellectual gifts, aided also by the art of the actor—his gestures and declamation—the regular theatre-goer would at once recognise on the comic stage the tone and diction of tragedy, the familiar manner of its dialogue or choral songs, and would flatter himself on his own discovery. It mattered not if only a few could identify the lines that were quoted or adapted, and assign them to their proper sources.² Even the scenes that were travestied might not to the ordinary hearer suggest the originals, except in those rare instances—some of which are known to us—where the play from which the parody was drawn had been recently exhibited. The comedian, after all, aimed only at a broad effect. He counted, and not in

¹ *Ol.* iii. 15 γνῶναι πάντων ἡμῖς ὀξύτατοι τὰ ῥηθέντα.

² Cp. *Diphilus* ii. Fr. 73 κ: some lines are quoted from *Euripides*, and one speaker asks,

πόθεν ἐστὶ ταῦτα πρὸς θεῶν;

The other replies,

τί δέ σοι μέλει;

οὐ γὰρ τὸ δρᾶμα, τὸν δὲ νοῦν σκοποῦμεθα.

vain, on a general and keen appreciation of literary style. It was enough for him if the mass of the audience took the main point. There was always an inner circle who would delight in the subtler turns of phrase and the associations which the parody called up.

All this, however, is literary criticism of the indirect kind,—though characteristically Attic in its very indirectness and allusiveness. In Plato we have the first beginnings of the large, the philosophic criticism which views literature as one of the ideal expressions of the human spirit, and seeks to arrive at the innermost laws of the art. Yet Plato seldom speaks of literary productions except in a tone of apology and distrust. Himself the greatest artist in prose that has ever lived, he was apt to think of the written word as dead, mechanical, irresponsive, standing before you with the cold beauty of a graven image, but helpless for self-defence, wanting in flexibility and adjustment.¹ Literature, if it is to be of any worth at all, must be

¹ *Phædr.* 275 D-E.

the image of the animated word,¹ a living force, engendering life and moulding character. This it can only be if it is planted in a congenial soul, whence to other souls can be transmitted a fruitful and immortal seed of thought. It must come in the spirit and power of philosophy, not as a doctrine but as a quickening influence. The φιλόλογος must himself be φιλόσοφος. This it was that determined Plato's view of the relation in which literature stands to life. To do things worthy to be written was in his eyes a dignity higher than to write things worthy to be read. A noble life is the noblest drama: the maker or artist who can teach us to build up such a life is the best of poets.² The words of Milton, at once Hellenist and Hebraist, come to our memory: 'He who would not be frustrate of his hope to write well hereafter in laudable things, ought himself to be

¹ *Phaedr.* 276 A τὸν τοῦ εἰδότος λόγον λέγεις ζῶντα καὶ ἔμψυχον, οὗ ὁ γεγραμμένος εἶδωλον ἂν τι λέγοιτο δικαίως.

² *Laus* vii. 817 B ἡμεῖς ἐσμὲν τραγωδίας αὐτοὶ ποιηταὶ κατὰ δύναμιν ὃ τι καλλίστης ἅμα καὶ ἀρίστης· πᾶσα οὖν ἡμῶν ἡ πολιτεία ξυνέστηκε μίμησις τοῦ καλλίστου καὶ ἀρίστου βίου, ὃ δὴ φάμεν ἡμεῖς γε ὅντως εἶναι τραγωδίαν τὴν ἀληθεστάτην.

a true poem, that is, a composition and pattern of the best and honourablest things.' As against this we may set the remark of a modern writer : ' A fine book is the end for which the world was made.'

Of the great ideas which Plato has contributed to literary criticism the greatest are to be found in the *Phaedrus*. We have already alluded to the theory there set forth of poetic inspiration.¹ Two other ideas may here be noted. In the first place, at the root of all good writing lies sincerity of conviction. The writer must have something to say, and must say it at first-hand. Where there is nothing to express there can be no artistic beauty, for the essence of the literary art is that it shall express reality. ' It is no genuine art of words that he will have who does not know the truth of things, but has tried to hunt out what other people think about it.'² Hence the uselessness of mere mechanical rules. All the 'ologies' and technical terms of the rhetoricians will not teach you to speak or write well. When once a true

¹ Supr. p. 143 ff.

² *Phaedr.* 262 c.

idea is strongly conceived, the 'irresistible law of right utterance' (λογογραφικὴ ἀνάγκη)¹ will follow. The second principle, closely related to the first, is that an artistic composition is an organic whole. 'It must in its structure be like a living thing, with head, feet, and body; there must be a middle and extremities, the parts being adapted to one another and to the whole.'²

Here, observe, and for the first time, the law of internal unity is enunciated as a primary condition of literary art—now a commonplace, then a discovery.³ The thought was taken up by Aristotle and became the basis of his reasoning on the drama. Organic as distinct from mechanical unity; not the homogeneous sameness of a sand-heap, but a unity combined with variety, a unity vital and structural, implying mutual interdependence of all the parts, such that if one part is displaced or removed the

¹ *Phaedr.* 264 B.

² *Ib.* 264 C.

³ Plato applies this principle of organic unity to the moral government of the world in the *Laws* x. 903 B-C, where all the parts are said to be ordered with a view to the excellence of the whole.

whole is dislocated—that is the leading critical idea of the *Poetics*.¹ From this point of view the unity and artistic beauty of a literary composition are found to reside in a pervasive harmony, a dominant impression, a single animating and controlling principle. So said the Greeks and so we say. But every people has not shared this view. ‘In the Persian ode,’ says Mr. Leaf (in his introduction to *Versions from Hafiz*), ‘we find a succession of couplets often startling in their independence. . . . To the Persian each couplet is a whole in itself, . . . sufficiently beautiful if it be adequately expressed, and not of necessity owing anything to that which comes before or after. It is from the common metre and common rhyme alone that the ode gains a formal unity. As Eastern poets are never tired of telling us, the making of an ode is the threading of pearls upon a string; the couplet is the pearl, round and smooth and perfect in itself, the metre is but the thread which binds them all together.’ This is very unlike the law of unity as under-

¹ *Poet.* viii. 4; cp. xxiii. 1.

stood by the Greeks. To them the dominant impression of oneness, the feeling of the whole, both in prose and poetry, seemed so indispensable that even in historical composition they shrank from admitting actual records, speeches, treaties, letters, or the like—anything which even in style might seem to mar the narrative by crossing it with a thing of alien texture.

Moderns, however, while accepting the Greek principle of unity as a primary requirement of art, have not in their judgments on Greek literature always accepted it in the Greek sense. Unity they demand, but another unity than that which satisfied the Greeks. They often fail to take account of the varying degrees of unity appropriate to the different forms of literature. Within the spacious compass of the Epic, as Aristotle pointed out,¹ ampler episodes may be admitted and a more discursive freedom allowed than is possible in the close and serried sequence of the drama. And it may be observed that, while in antiquity captious critics discovered all

¹ *Poet.* xviii. 4 ; xxiii. 3 ; xxiv. 4.

manner of flaws in Homer, one defect alone they never discovered—a want of unity in the *Iliad* or the *Odyssey*. Indeed, according to Aristotle, it is the unity of these poems that constitutes their pre-eminent excellence, a unity derived not from the hero being one but from the action being one.¹ ‘In structure they are as perfect as possible; each is, in the highest degree attainable, an imitation of a single action.’² The Platonic dialogues are another case in point. Several strands of thought are here subtly interwoven. In the *Phaedrus*—the very dialogue in which the stringent law of unity is prescribed—where does the unity reside? What is the real subject of the dialogue? Is it love, as treated in the earlier part, or rhetoric which is treated later, or something larger than either of these? So too in the *Republic*, what is its theme? The dialogue reaches beyond the nature of Justice, or the constitution of the ideal State. Only by degrees do we come to see how delicate are the links which bind a single Platonic dialogue into a

¹ *Poet.* viii. 1-3.

² *Poet.* xxvi. 6.

whole, and how the apparently disconnected topics may be merged in a higher unity. Here is no want of art, but an art so finished as to elude our rough and often mechanical tests. It should serve as a warning to certain modern critics to whom ancient masterpieces appear to be the work of 'a committee with power to add to their numbers.'

We pass now to the *Poetics* of Aristotle, the only piece of systematic criticism—and yet how unsystematic—that has come down to us from the classical age of Greece. A strange irony it seems that the most severely logical and, in a sense, unimaginative of philosophers should have seen more deeply into the inner nature of poetry than Plato, who of all philosophers was most poetical; and that the *Poetics*, a fragmentary and tentative treatise, which in many respects is the spirit of prose incarnate, should have permanently affected the poetical theories of Europe. No ancient treatise, however, has so philosophic an outlook on literature, such precision in detail, such wealth of suggestion, so many remarks far-reaching in their scope and

dropped with such careless and lavish ease. In proportion as we are able to rid ourselves of old misapprehensions, to discard the glosses of half-instructed expositors, and to read the book in the light of Aristotle's own system, the more profound does his teaching appear.

We could wish, indeed, that he had taken to heart the words of Plato: 'Whoso knocks at the doors of Poesy untouched by the Muses' frenzy, fondly persuading himself that art alone will make him a thorough poet, neither he nor his works will ever attain perfection, but are destined for all their cold propriety to be eclipsed by the effusions of the inspired madman.'¹ That Aristotle did not entirely ignore the 'ecstatic' element in poetry we have already seen.² But while aware of the existence of the inspired poet, of whom Plato tells in the *Phaedrus* and the *Ion*, he writes of

¹ *Phaedr.* 245 A δς δ' ἂν ἄνευ μανίας Μουσῶν ἐπὶ ποιητικὰς θύρας ἀφίκηται, πεισθεὶς ὡς ἄρα ἐκ τέχνης ἱκανὸς ποιητὴς ἐσόμενος, ἀτελὴς αὐτὸς τε καὶ ἡ ποίησις ὑπὸ τῆς τῶν μαινομένων ἢ τοῦ σωφρονοῦντος ἠφανίσθη. (Trans. W. H. Thompson.)

² Supr. p. 146.

poetry in too coldly logical a manner, as if its emotional effects could be attained by following rules of dramatic construction, by orderly arrangement and analysis. We could wish, again, that he had shown more appreciation of the grandeur of Aeschylus; of the humour and unquenchable laughter of Aristophanes; that he had not passed over with deliberate neglect (for such it would seem to be) the great lyrical poetry of Greece—Simonides, Pindar, Sappho, Alcaeus, to none of whom does he make even faint allusion. True, the treatise is a fragment; but there are good grounds for thinking that this does not account for the fact. Was it, perhaps, that lyrical poetry interested him only as a rudimentary art—uttering itself in the form of improvised chants and dithyrambic hymns—which marked a stage in the development of the drama? for in the drama, he held, the poetic art culminated; even the epic being treated by him as imperfectly developed drama. May it not also be that in the personal outbursts of lyrical song, in the self-abandonment, the rush of feeling of Sappho

or Alcaeus, he missed the characteristic Hellenic self-restraint—this unimpassioned critic, who appears, moreover, to have been but little susceptible to the magic of words and the charm of musical speech? Yet all this does not explain his omission of Pindar. In any case, we have here certain limitations of his poetic sensibility, and of a kind so striking that they should not pass unnoticed.

Still, when all deductions have been made, the permanent value of the book increases the more it is studied. Its strength lies in this, that Aristotle had before him a literature of wonderful range and originality; that the laws presiding over its creation were not the arbitrary rules of a school, but, we may almost say, the artistic laws of the human mind; and that he arrives at his principles by a penetrating power of observation and analysis, and a wide induction drawn from the practice of the great writers. And, throughout the inquiry, he maintains that attitude of judicial impartiality which he himself, in one of his physical writings, notes as a mark of the true critical

spirit: 'We should be umpires and not litigants.'¹

It has been sometimes said that Aristotle thinks only of the form—the artistic form—not of the content of poetry. But this appears to be a misapprehension. Perhaps the most original and pregnant saying in the *Poetics* is that which declares poetry to be 'a more philosophic and higher thing than history,' being concerned with the universal not with the particular.² It tells of what man does or may do in given circumstances; of the permanent possibilities of human nature as distinct from the acts of the individual—'what Alcibiades did or suffered.' The subject-matter of poetry is the universal—that which is abiding and structural in humanity, which appeals to all men and finds a response in every age. Poetry is not, as some modern writers would have us believe, interested only or chiefly in the rare and unique case, in some abnormal fact of

¹ *De Caelo* i. 10, 279 b 11 δὲ δὴ δῖαιτητὰς ἀλλ' οὐκ ἀντιδίκους εἶναι.

² *Poet.* ix. 3 διὸ καὶ φιλοσοφώτερον καὶ σπουδαιότερον ποίησις ἱστορίας ἐστίν.

psychology,—or rather, we should perhaps say, of pathology. But here comes the point I desire to emphasise. Unity of form is brought by Aristotle into immediate and even necessary connexion with universality of content.¹ The one depends on the other. In proportion as the subject-matter is universalised, the unity is perfected. For in the process of universalising, the transient and perishable part is eliminated; the unreason of chance is expelled; we are admitted to observe the working of human motive in a world into which pure accident hardly intrudes, where cause and effect have fuller and freer play—the realm of art which is a realm of design. In short, the world of poetry—and this is true pre-eminently of dramatic poetry—is a world more unified, more intelligible than the world of experience, just because the subject-matter is the universal.

No other ancient writer, so far as I know, has hinted at this close relation between artistic

¹ Chap. viii. of the *Poetics* deals with artistic unity, chap. ix. with universalised subject-matter, and the opening words mark the connexion,—φανερὸν δὲ ἐκ τῶν εἰρημένων.

unity and universality of content. Lesser critics have been always disposed to think of form and subject-matter apart, and to lay emphasis on one to the neglect of the other. But in Aristotle the two things are as inseparable in the higher kinds of imaginative literature as they are in his philosophy. The first principle of his philosophic system is that the union of form and matter, of *εἶδος* and *ὑλη*, is necessary to make the real, the concrete object. To separate them in philosophy is to reduce philosophic thought to mere abstractions. To separate them in literature is the direct negation of all that artistic production implies. Literature becomes either, on the one hand, formless and chaotic, or, on the other, devoid of reality, out of touch with life.

Aristotle's remarks often contain an implicit reply to objections which had been urged by Plato. Let us take a single point by way of illustration. It touches a problem which vexed the mind and conscience of Greece throughout its history. Plato in his dialogues wavers between his awe and love of Homer, 'the

wisest of our poets,'¹ 'the captain and teacher of that charming tragic company,'² and a still more passionate love of truth. Fascinated though he is by Homer's genius he cannot admit him to his ideal republic. Homer 'tells lies,' and lies too that are immoral.³ His gods and men do things which ought neither to be done nor heard of. And whereas the aim of poetry should be to teach us to be good and brave and true, Homer by his potent spells steals away our hearts. He sets before us weeping heroes in all the luxury of woe. He feeds emotions which ought to be starved, and makes anarchy in the soul.⁴ To which Aristotle's answer on the lines of the *Poetics* would be to this effect. First, as to the 'lies.' Homer is the great master of the art of 'lying.' He has shown all other poets 'how to tell lies as they ought'; he has taught them the art of beautiful fiction.⁵ But the poet's lie is not the lie of

¹ *Laws* vi. 776 E.

² *Rep.* x. 595 C.

⁴ *Rep.* x. 606 A-D.

⁵ *Poet.* xxiv. 9 δεδίδαχεν δὲ μάλιστα Ὅμηρος καὶ τοὺς ἄλλους ψευδῇ λέγειν ὡς δεῖ. See *Aristotle's Theory of Poetry and Fine Art* (third ed.), p. 171 ff.

common life, even as the truth of poetry stands far apart from the truth of fact. The poet at the outset asks you to grant him certain assumptions which are the necessary conditions of imaginative creation. You make your tacit compact with him; you accept his premisses; and forthwith he transports you into an ideal world, remote from the world of experience. In that world 'probable impossibilities' (ἀδύνατα εἰκότα) are preferred to 'possible improbabilities' (δυνατὰ ἀπίθανα).¹ The things that never were or will be, if but the poet has the skill to lend them the air of likelihood, the colour and the form of truth, are better—yes, 'truer' in a poetic sense—than the anomalies of experience, the 'improbable possibilities,' which people defend in fiction by saying, 'Oh, but the thing happened.'

And through this emancipating word of Aristotle's the poet, as by a touch of his wand, can at once throw open to us the whole world of fabulous adventure in epic and romance, not only the wonders of the

¹ *Poet.* xxiv. 10; xxv. 17.

Odyssey, but also the fairyland of the *Arabian Nights*.

So much for the 'lies,'—Aristotle would continue. Then as to the 'immorality.' Do you not mistake the true end of poetry when you demand that it should directly teach morals? The aim of poetry is pleasure, not edification or moral instruction. Ethical principles, pure and simple, cannot be taken as the test of rightness in the domain of art. Poetry is not morals or politics any more than it is science, history, or philosophy.¹ Yet though moral and æsthetic laws are not interchangeable, let it not be thought that poetry is thereby severed entirely from morality. For pleasures differ in kind—in quality as well as in degree—and the higher the poetry,—the more elevated, the more moral, will be the pleasure. The pleasure which is the aim of art cannot be produced by the representation of the morally ignoble or depraved. Some things are unfit for art—too trivial, too hideous, too squalid. In tragedy, nobility of character is necessary to awaken the

¹ *Poet.* xxv. 3.

blended emotions of pity and fear. Wickedness is admissible only when demanded by an inner necessity in the evolution of the action, by the cogent requirement of dramatic motive.¹ Even the bad persons permitted in comedy are not absolutely bad. Their badness consists in an ugliness or deformity of character which is painless, and therefore can be ludicrous.² Degraded lives there are in nature, but that is no reason for reproducing them simply as degraded in art. For art has to do not with the ideally worse, but with the ideally better—that ‘better part’ (τὸ βέλτιον) to which nature moves, though thwarted in her movement.³ It is not the function of art to exhibit selected specimens of disease or decay, but to correct nature’s failures, to create such things as nature strives to produce, to carry them to a more perfect completion.

While art, therefore, must not be asked to teach morals, its business being to yield pleasure, yet incidentally it will in a sense instruct and

¹ *Poet.* xxv. 19.

² *Poet.* v. 1.

³ See *Aristotle’s Theory of Poetry and Art*, p. 151 ff.

edify by the nobility of the pleasure arising from its ideal creations. Nor is this pleasure, this emotional delight at which poetry aims, a purely individual sensation. It is a pleasure which must be tested by reference to the social organism; it is, in a word, the higher and enduring pleasure of the community, or of that refined portion of it which may be taken as the æsthetic representative of the whole. Judge Homer's morality by this standard. Ask not whether this or that action is in itself good or bad, but how it fits into the general framework of the poem; what is the dominant impression left? Is the resultant pleasure low or is it elevated? Does Homer indeed enfeeble the spirit and relax the moral fibre? or does he brace the mind to all strenuous and noble action?

The answer which Aristotle would have given to this question accords with the popular conviction of Greece, a conviction which survived into the Christian era. In an imaginary conversation by a Greek writer of the empire, Alexander the Great, still a youth, is asked by

his father, why he reads only Homer to the neglect of all other poets, and his reply is: 'It is not every kind of poetry, just as it is not every kind of dress, that is fitting for a king; and the poetry of Homer is the only poetry that I see to be truly noble and splendid and royal, and fit for one who will some day rule over men.'¹

Had the principles of the *Poetics* been grasped by the successors of Aristotle, Homeric criticism and the criticism of poetry generally might have run another course. But ancient prejudice was too strong. Homer paid the penalty of his greatness. He had long been regarded as the inspired bard. He was also the universal sage, from whom could be learned the facts of history and geography and all the special arts and sciences. Then, when his information proved incorrect, there were critics who said that he 'told lies.' Yet the *Iliad* and the *Odyssey* continued to hold their own as popular manuals of conduct; and it was precisely in his capacity of educator of youth that

¹ Dio Chrys. *Or.* ii. ad init.

Homer was most sharply attacked. The philosophers protested against his theology, the protest dating back to the sixth century B.C. ; nor was the feud between philosophy and poetry ever quite healed. Various efforts at reconciliation were made. One such attempt, well-meaning but futile, was destined to be the bane of criticism for centuries to come. Homer, it was said, must not be interpreted literally. He spoke in dark sayings. Beneath the outward narrative hidden meanings (*ὑπόνοιαι*) may be discovered. His stories are symbolical either of moral truths or of physical phenomena. 'Homer,' said a Stoic philosopher of the first century A.D., 'would certainly be impious if he were not allegorical.'

The influence of this vicious critical method, and the vitality of the heresy on which it rests, may be seen at their worst in the traditional interpretation of Scripture. Biblical criticism up to a recent date has been marked by many of the faults with which we are familiar in the interpretation of Homer—the violence done to the language, the neglect of the context, the

explaining away of contradictions, the far-fetched symbolism, the indifference to time and place, to the thought of the age and the circumstances of the writers. These defects do not merely mark the outbreak of a recurrent disease to which the human intellect is liable. The Old Testament scriptures presented moral difficulties analogous to those which had offended the Greek philosophers. Jews like Philo (first century A.D.), and Christian writers such as Clement of Alexandria and Origen (both of the third century), who were versed in Greek learning, met these difficulties by resorting to the allegorical solution, the doctrine of the hidden meaning ; and the form in which their arguments are couched betray the school of criticism whence they are derived. The writers are working on the lines of the old Homeric apologists whose theories had long ago been discredited both by Plato and Aristotle. There is no more curious example of the persistent influence of a faulty method, mischievous in its first application, doubly pernicious when extended from the secular sphere into that of religion.

Reverting for a moment to Homer we may take note of another and equally misguided line of Homeric criticism, which was already in vogue in the third and second centuries B.C. The predecessors of Aristarchus in the school of Alexandria loved to discover some 'impropriety' (*ἀπρεπές*) in the poet. The Homeric scholia abound in examples. In *Odyssey* xi. 524 Odysseus narrates the story of the Trojan horse within which he and his comrades were concealed: 'The charge of all was laid on me both to open the door of our close ambush and to shut the same.' These lines, says the scholiast, must be deleted 'as unseemly' (*ὡς ἀπρεπῆ*): 'that is the work of a hall-porter' (*θυρωροῦ γὰρ ἔργον*). The rules of etiquette observed in the court of the Ptolemies presumably hold good for the interior of the Trojan horse. Again, in *Odyssey* xv. 82 Menelaus promises to speed his guest Telemachus on his way: 'I too will go with thee and lead thee to the towns of men, and none shall send us away empty, but will give us some one thing at least.' A note is here appended, probably from the hand of Aristo-

phanes of Byzantium (circ. 200 B.C.): 'Again it is unseemly that Menelaus should teach Telemachus to be a mendicant.' No wonder, then, that it is also 'unseemly' for Aphrodite to set a chair for Helen (*Il.* iii. 422), and for Athene to bear a lamp to light the way for Odysseus and Telemachus (*Od.* xix. 34). 'A menial and most trivial conception' (*δουλοπρεπὲς καὶ λίαν εὐτελὲς τὸ τῆς διανοίας*) is the comment we find on the latter passage.

Aristarchus, the great critic of Alexandria (circ. 170 B.C.), almost alone among the learned men of that day, brought genius and common sense to bear on the Homeric poems. His guiding principle was that Homer must be explained by himself. The Epic language was a thing apart; it must be studied in detail; Homeric and Attic usages of words must be distinguished. Again, the manners and the customs, the civilisation of other times must not be imported into the Homeric age. The method of allegory should not be applied to the Homeric mythology. The legends must be accepted in their literal sense as belonging to

the childhood of the race, without making Homer responsible for their truth or their morality.

Full justice has always been done to Aristarchus as a verbal critic of Homer. But he deserves no less credit for the vigorous war he waged against absurdities such as those which have been quoted. Yet, unfortunately, he himself falls at times into the same error. The atmosphere of Alexandria clings to him. He cannot keep himself at the true angle of vision and frankly accept the simplicity of Homeric life. In *Odyssey* vi. 244 Nausicaa, on first meeting with the shipwrecked Odysseus, utters the wish: 'Would that such a one might be called my husband, dwelling here, and that it might please him here to abide!' To Aristarchus the wish appeared indecorous and unmaidenly. A little later (*Od.* vii. 311) Alcinous exclaims: 'Would that so goodly a man as thou art and like-minded with me, thou wouldest wed my daughter and be called my son-in-law, here abiding!' Again the critic's sound principles fail him; that is not how

marriages were made in the court of the Ptolemies. He therefore rejects (*ἀθετεῖ*) the verses containing Nausicaa's unmaidenly wish, and places his mark of doubt (*διστάζει*) against the six lines that tell of Alcinous' offer of marriage. But he has some misgivings. The lines, he admits, have a Homeric flavour; still they can hardly be genuine; for who would think of engaging his daughter to a stranger of whom he knew nothing, and who moreover had not even asked for her hand?¹ In a similar spirit of deference to the usages of polite society Aristarchus is offended by the passage in *Iliad* ix. 322, where the envoys from Agamemnon took a meal in the tent of Achilles, and 'put away the desire' (*ἐξ ἔρον ἔντο*) 'of meat and drink,'—though they had already 'drunk as much as their heart desired' (ix. 177) before leaving the tent of Agamemnon. It would have been better, said Aristarchus, if the poet had written, 'again tasted' food (*ἀψ ἑπάσαντο*)—making them take merely a light refec-

¹ See also Plutarch's guarded comments on the incident (*de Aud. Poet.* ch. viii. p. 23).

tion out of compliment to their host. Still from excessive caution (ὕπὸ περιττῆς εὐλαβείας) he did not change the reading.

Here we may take a rapid glance backwards and observe the contrast between Alexandria of the second century B.C. and Athens of the fifth century B.C.

In Alexandria we have the famous Museum, a royal foundation, with corporate rights and large endowments, specially designed to encourage learning and research. Among its other functions it aspires to maintain the purity of Greek idiom, to arrest the encroachments of other tongues, and to fix a standard of taste. To this city erudite men resort from all parts of the world. The accumulated treasures of Greek literature have here found a home. There are two libraries containing some five or six hundred thousand volumes. A vast apparatus of learning; and with what result? I speak now only of the effect on literary taste and literary criticism; for no one could think slightly of the services rendered us by that encyclopædic industry, above all by the

laborious collection and comparison of Greek texts ;—to those scholars we largely owe it that we have a Greek literature to-day. But if criticism implies some intuition and sympathy, a faculty for apprehending a writer's inmost meaning, most of their critical work, at least in the domain of poetry, is unilluminating ;—save where we meet with the sane and vigorous intelligence of Aristarchus, or discover the too rare relics and jottings of Aristotelian tradition. Even from the lighter recreations of this society of *savants*, we learn something of their quality. We read of literary symposia where erudite garrulity loved to amuse itself with questions trivial to ask, impossible to answer—Why did Nausicaa wash her garments in sea-water rather than in the river ? how could Poseidon have had so ugly a son as the Cyclops ? on which hand, the right or the left, was Aphrodite wounded by Diomedes ?

Now turn from the cosmopolitan city of learning to Athens of the Periclean age. Few books, an oral literature, a diffused intellectual atmosphere, the sway of the living word,

criticism keen but unformulated. There, for one brief moment, literature and art responded with prompt impression to the call of patriotism and religion ; each new product of genius made its immediate appeal to a concourse of assembled citizens ; and by a rare and happy fortune the verdict of the few coincided with the instinct of the many. The secret of the surprising change—what was it ? Literature at Alexandria was divorced from life ; it had become the craft of a *coterie*, carried on within closed walls ; ingenious, finished, industrious, sometimes even tender and beautiful ; but no longer the spontaneous expression of the mind of the community. No current of national life was stirring to vivify its failing force. Nor with the waning of the creative impulse did the critical faculty awaken—as it has done at some periods of history—to prepare the way for another forward movement. The critics pored over their classic books, but as erudite men, not as lovers of literature—*πολυμαθεῖς* not *φιλόλογοι*. The links were broken which bound the present in historic sympathy to the

past ; and many generations were destined to elapse before it was discovered that the task of criticism demands not only learning but directness of vision, some sense of perspective, and an effort of imaginative reconstruction.

VI

GREEK LITERARY CRITICISM

‘LITERATURE,’ said Goethe, ‘is the fragment of fragments. The smallest part of what has been done and spoken is recorded, and the smallest part of what has been recorded has survived.’ May we not add, from the Greek point of view,—‘the smallest part of what has survived is literature’? The modern world in judging prose is often undecided as to what is literature and what is not. We are all agreed that we cannot include in literature every form of written or printed matter. But where does literature begin or end? Must we exclude almost all science, much history, most fiction? On one or two points at least the Greeks never wavered. When the early glamour—the sense of mystery and almost of magic

—attaching to the discovery of writing had passed away, writing was at first thought of chiefly as a mechanical aid to memory. It saved from oblivion the inspirations of the Muse. Outside poetry its early uses were of the practical kind: it was employed for registering treaties and contracts and for keeping accounts.¹ So far, however, as it was designed to serve purely material ends, it formed part of the prosaic order of life and lacked the dignity of art. In order to enter into the domain of art, in order to become literature,

¹ Euripides notes accurately the early use of writing for practical purposes—letters or messages, wills, contracts, etc. ; see Fr. (Palamedes) 578 Nauck :

τὰ τῆς γε λήθης φάρμακ' ὀρθώσας μόνος
ἄφωνα φωνήεντα συλλαβὰς τιθεῖς
ἐξηῦρον ἀνθρώποισι γράμματ' εἰδέναι,
ὥστ' οὐ παρόντα ποντίας ὑπὲρ πλακὸς
τάκεῖ κατ' οἴκους πάντ' ἐπίστασθαι καλῶς,
παῖσιν τε τὸν θνήσκοντα χρημάτων μέτρον
γράφαντας εἰπεῖν, τὸν λαβύντα δ' εἰδέναι.
ἃ δ' εἰς ἔριν πίπτουσιν ἄνθρωποι πέρι,
δέλτος διαιρεῖ, κοῦκ ἔᾗ ψευδῇ λέγειν.

Cp. schol. on *Odyss.* viii. 163 ὅθεν καὶ τοὺς Φοίνικας ἐμπόρους ὑπὸ τῆς χρείας αὐτῆς ('purely practical needs') ἐπὶ τὴν τῶν γραμμάτων εὕρεσιν ἐλθεῖν.

the written word must needs invest itself with a new character. First, it must become an expression of human thought or emotion. The bare cold fact must pass through a human medium ; it must take the personality of the writer, or be coloured by the collective experience of the race. Secondly, some beauty of form must be impressed upon it—a beauty that should be tested by the ear as well as by the mind.

These principles had long been instinctively recognised in poetry. As soon as Greek reflection applied itself to the difficult problem of how to write prose, the conviction slowly took shape, that if prose is to be more than a lifeless record of facts and figures ; if it is to exert its full force in civic life as an instrument of persuasion ; if it is to be of enduring value as a vehicle of discovered truth, it must, like verse, submit itself to the law of beauty. Style is no mere concession to human infirmity ; it is the imperious demand of art ; and through art alone can the perishable word clothe itself in lasting form. Even the scientific writers of

Greece sought to stamp the impress of art, some grace of style, upon works which otherwise could not, they felt, pass outside the narrow circle of specialists. The great treatise of Hippocrates on medicine begins with the words : ' Life is short : Art is long : Opportunity fleeting : Experiment hazardous : Judgment difficult.' ¹ At once you hear the tones of one who is an artist in prose ; this, you say, is literature as well as science. With what delighted surprise we should to-day greet a medical treatise with such an opening !

In our own day the style of prose is subjected to two different and even opposing influences. On the one hand, those who feel the need of making prose artistic, easily become artificial : they rely on the suggestive more than on the expressive force of words ; they adopt a manner of writing which is far-fetched, allusive, recondite. Those, on the other hand, who feel the need of making prose practical, of producing an effect strong and immediate,

¹ Hippocr. *Aphor.* i. 1 ὁ βίος βραχύς, ἡ δὲ τέχνη μακρή, ὁ δὲ καιρὸς ὀξύς, ἡ δὲ πείρα σφαλερὴ, ἡ δὲ κρίσις χαλεπή.

fall into exaggeration in the desire to be emphatic. In either case the language is strained. Style becomes in the one instance affected ; in the other, breathless and in a hurry. But the great prose writers move us by their powerful simplicity, their quiet strength, their sense of measure and proportion, even by what has been called their 'grand leisureliness' of manner. They recall the Eastern proverb, 'Hurry comes of the devil, slowness of God.'

No more wholesome corrective of any false ideals of prose writing can be found than the study of Attic prose masterpieces. At first perhaps they strike us as cold. The rhetorical manner, the pomp of phrase of aristocratic Rome, is more congenial to modern taste. We are accustomed to sonorous periphrases, to pathetic and emotional appeals, to saying rather more than we mean, in the hope that people may be convinced that we mean something. But by degrees we become conscious not only of the charm, but also of the power of simplicity. We see that an exaggerated phrase is often due to mere ignorance of

the 'proper' word. Monotonous splendour soon wearies us, and we confess the truth of Aristotle's remark, that 'a too brilliant diction obscures the expression of character and thought.'¹

The Athenians disliked phrase-making. Overdone ornament did not, in their judgment, adorn but deface. The beauty of prose was felt to lie in the texture of the whole, rather than in isolated phrases or passages. To present an idea in its true proportions, the parts being skilfully adjusted to one another, and the proper values of each given by contrast and arrangement—this was their chief concern. It would, of course, be misleading to speak of Attic authors as if they all wrote in one style. The broad contrasts between them are numerous and striking; the finer shades of difference are endlessly various. But there are certain common characteristics which mark the Attic manner. The speech is that of daily life, direct and lucid; of men who are accustomed to easy

¹ *Rhet.* xxiv. 11. 1460 b 4 ἀποκρύπτει γὰρ πάλιν ἡ λίαν λαμπρὰ λέξις τὰ τε ἥθη καὶ τὰς διανοίας.

human intercourse without artificial barrier or restraint, who desire to understand, and to be understood of others. But the colloquial idiom is raised above the commonplace. It has an added touch of distinction, unobtrusive but unmistakable; a beauty or charm which conceals the hand of the artist; sometimes, too, an energy, a compactness of phrase—quite unlike the flowing grace of the Ionian writers—which reminds us, perhaps too forcibly, that this finely tempered instrument of language has been forged or sharpened in the rhetorical schools.

It is a style scrupulous in the purity of its diction, in avoidance of provincialisms, in the effort to hit the right, rather than the approximately right word. It has a certain well-bred elegance, which cannot be mistaken for pedantry. It obeys, moreover, the law of reserve: it wins the goodwill of the reader by leaving something to his own intelligence.¹ In the

¹ Cp. Theophrastus ap. Demetr. *De Eloc.* 222 οὐ πάντα ἐπ' ἀκριβείας δεῖ μακρηγορεῖν, ἀλλ' ἔνια καταλιπεῖν καὶ τῷ ἀκροατῇ συνιέναι καὶ λογίζεσθαι. ἐξ αὐτοῦ· συνεῖς γὰρ τὸ ἐλλειφθὲν ὑπὸ σοῦ οὐκ ἀκροατῆς μόνον, ἀλλὰ καὶ μάρτυς σου γίνεται, καὶ ἅμα εὐμενέστερος

region of feeling it is discreet and guarded. It refuses to speak in accents of emotion where emotion is wanting; but where real passion has to be expressed, the glow of feeling is at once revealed in the rising tone and in rhythms in which we seem to overhear the very vibrations of the voice. Still, even in its impassioned and imaginative modes of utterance Attic prose retains the sense of measure, the precision, the sobriety, which constitute its essential character. It is just this union of passion and self-restraint, the appeal to the reason no less than to the emotions, that lends to Greek oratory its incomparable force.

There was a moment in the fifth century B.C. when the Athenians, shaping their prose under the influence of the Sophists, were tempted to take up the cult of 'Art for Art's sake,' and to aim at æsthetic expression apart from the meaning to be conveyed. They would hardly indeed have subscribed to Flaubert's saying, that 'a beautiful verse meaning nothing is superior to a less beautiful verse meaning something': still it was in that direc-

tion that the danger lay even in prose composition. But the just literary instinct of the people, combined with their practical sagacity and the vigour of their political life, saved them from this alluring evil. That the expression in words should be exactly adequate to the thought,¹ and should also charm the ear, became the guiding principle of their literary art. The dislike of the Athenians for false ornament, their intolerance of exaggeration, their power of direct vision, led them to find the perfection of language in keeping closer than any other people to what was simple and natural. Thus they found it possible to reconcile their disdain of mere phrase-making with an exquisite delight in beautiful and harmonious words.

The value attached to literary form by all antiquity, Greek and Roman, is, as stated in general terms, a familiar and trite idea. But it is of capital importance to remember that in testing beauty of form the Greeks submitted

¹ Cp. Lysias ap. Greg. Cor. p. 4 ἡ γὰρ γλῶττα νοῦν οὔτε πολὺν οὔτε μικρὸν ἔχει, ὁ δὲ νοῦς, ὃ μὲν πολὺ, πολὺς, ὃ δὲ μικρὸν, μικρός.

the written word, prose and verse alike, to the immediate judgment of the ear. The language in which the later Greek critics speak of the harmonies of prose composition might, by a modern reader, be suspected of some unreality. But the truth is that the power of sound, the rhythm and music of the spoken word, was felt by the Greeks in a degree we cannot readily comprehend. 'With harmonious arrangement of words comes Literature in its many kinds.'¹ 'There is a marvellous attraction and enthralling charm in appropriate and striking words. . . . Beautiful words are the very and peculiar light of the mind.'² The Chinese, whose language like that of the Greeks is distinguished by the musical, as opposed to the stress, accent, are said to be the only modern people who are equally sensitive to the æsthetic sound of words.

¹ Dionys. Hal. *De Comp. Verb.* c. xvi παρὰ δὲ τὰς τῶν ὀνομάτων ἁρμονίας πολύμορφος ὁ λόγος γίνεται (Trans. Saintsbury, *Locī Critici*, p. 34).

² Longinus *De Subl.* c. xxx ἡ τῶν κυρίων καὶ μεγαλοπρεπῶν ὀνομάτων ἐκλογή θαυμαστῶς ἄγει καὶ κατακληῖ τοὺς ἀκούοντας . . . φῶς γὰρ τῷ ὄντι ἴδιον τοῦ νοῦ τὰ καλὰ ὀνόματα.

The art of printing has done much to dull our literary perceptions. Words have a double virtue—that which resides in the sense and that which resides in the sound. We miss much of the charm if the eye is made to do duty also for the ear. The words, bereft of their vocal force, are but half alive on the printed page. The music of verse, when repeated only to the inward ear, comes as a faint echo. But it is perhaps in prose that we have most to learn from the ancients in respect of style. They observed the movements of prose rhythm, they felt its harmonies, the happy union of music and meaning, the adjustment of sounds to the mood or feeling they would convey—all this in a manner impossible save to those with whom eye and ear, soul and sense, have been trained to work together in perfect correspondence. It is a fact but little known that throughout the Greek period, and far into the days of the Roman empire—to the third and fourth century of our era—the custom survived of reading both prose and verse, not silently, but aloud and in company.

There is a curious passage in Augustine's *Confessions*, one of the few in ancient literature where silent reading is mentioned.¹ He there tells of the difficulty he had in getting access to his master Ambrose, whose rare hours of leisure were spent in reading, and who was often observed to run his eye silently over the page, while 'his voice and tongue were still.' Various reasons are then suggested to account for so strange a departure from the common practice.

'To write and read comes by nature,' said Dogberry. Epicurus, it seems, held a like opinion: 'there is no difficulty,' he said, 'in writing.'² The Greeks on the whole did not find it so. Verse came to them almost as their native speech. From their cradle they had the gift of song. But the language of prose was built up by long and laborious

¹ August. *Confess.* vi. 3 'cum legebat oculi ducebantur per paginas, et cor intellectum rimabatur, vox autem et lingua quiescebant.' In the Classical age ἀναγιγνώσκειν is rarely used of silent reading, the full phrase being ἀναγιγνώσκειν πρὸς ἑαυτὸν.

² Dionys. Hal. *De Comp. Verb.* c. xxiv.

discipline. Those who first wrote prose had to create it; they had no foreign models, no tradition to guide them. The only tradition was the tradition of poetry.¹ From this, by degrees, they strove to set themselves free. But they were haunted by Epic reminiscences, by the old poetic diction, by the rhythm and roll of the hexameter. Even in the philosopher Heraclitus hexameter endings are not uncommon;² and in Herodotus we find a greater number of beginnings and endings of hexameter lines than in any later author. These early writers easily slip into metre, especially when the thought and diction become elevated; just as blank verse is always forcing its way into English prose. In Greece snatches of metre and other poetical ornaments were at first sought out as an embellishment of prose. In time the practice was

¹ Cp. Strabo i. 2. 16 *πρώτιστα γὰρ ἡ ποιητικὴ κατασκευὴ παρῆλθεν εἰς τὸ μέσον καὶ εὐδοκίμησεν· εἴτα ἐκείνην μιμούμενοι, λύσαντες τὸ μέτρον, τὰλλα δὲ φιλάξαντες τὰ ποιητικά, συνέγραψαν οἱ περὶ Κάδμον καὶ Φερεκύδη καὶ Ἑκαταῖον.*

² *E.g. μαρτυρεῖ παρόντας ἀπείναι—τὸ μὲν ἡμῖς γῆ, τὸ δὲ ἡμῖς πρηστήρ.*

decisively condemned by all good critics. Aristotle, who laid it down that the styles of poetry and prose are distinct,¹ also insisted that 'prose should have rhythm but not metre, or it will be a poem: the rhythm, however, must not be over-exact; it must be kept within due limits.'² What the due limits were, was a question variously answered. For the rest, the rule that prose should be rhythmical, became an accepted canon of criticism. Plato goes so far as to discover a moral danger in prose compositions which lack rhythm or harmony; to his mind they indicate some disorder within the soul.³

While prose rhythm was not only permitted but enjoined, another and cognate question, that of poetic prose, was more open to debate. Literary taste was at first divided on the point. When literature descended from

¹ *Rhet.* iii. 1. 9. 1404 a 28 ἑτέρα λόγου καὶ ποιήσεως λέξις ἐστίν.

³ *Latws* vii. 810 B.

her chariot of poetry—to use the metaphor so frequently employed by Greek writers¹—she affected the manner of ‘high-stepping’ prose rather than resign herself at once to ‘march on foot’ (πεζὸς λόγος). Gorgias (fifth century B.C.) was one of the first to invoke these graces of poetry.² Yet he and his school worked at the language in the spirit of artists; and, though their zeal betrayed them into some overwrought ingenuity, an excessive use of figures, wearisome antithesis, verbal assonances, and so forth, still they had a true presentiment of the capacities of Greek speech. They felt that it was possible to impart to prose a nobility of its own; that it could be lifted above the idiom of daily life, and yet acquire force and precision. ‘It is the perfection of style,’ says Aristotle, ‘to be clear without being mean’;³—but, he proceeds, ‘by deviating sometimes from the normal idiom,’ ‘by adding some

element of novelty or surprise,' 'the language will gain distinction' (τὸ μὴ ἰδιωτικόν).¹ In his judgment, however, Gorgias exceeded the proper limits of such deviation. His prose approached too nearly to the poetical manner, and on this account he is censured more than once in the *Rhetoric*.²

It so happens that a few specimens are elsewhere also preserved of Gorgias' metaphorical and poetical style. 'At last Sleep begins to lay me beside his brother Death'—is one of his sayings in extreme old age:³ another is: 'Gladly I go hence as from a lodging ruinous and decayed.'⁴ As isolated sayings, these could hardly offend Greek, any more than they do English taste. But in both languages they belong rather to the order

of poetry, and could not appropriately be used in prose except at rare moments. Of the metaphors which Aristotle cites and censures in prose, two, perhaps, deserve mention. One is from the pen of Gorgias: 'You sowed in shame, to reap in ruin.' 'Too grand and tragic,' says Aristotle;¹ and familiar as is the metaphor of sowing and reaping, I think we should concur with him. Even to modern ears the saying is high-flown in so antithetic a form, and it would need a very impassioned context to justify it. It is otherwise with the metaphor he quotes with disapproval from Alcidas (one of the school of Gorgias) describing the *Odyssey* as 'a fair mirror of human life.'² The most fastidious modern critic would not carp at this. But the word *κάτοπτρον* in its metaphorical sense must have had something far more daring and unaccustomed for a Greek than the word 'mirror' has in English. Aristotle's censure of the same writer for employing ornamental

epithets 'not as the sauce of the discourse but as the dish,'¹ is levelled at a fault of taste into which the Greeks seldom fell.

Aristotle does not appear to have appreciated either the suggestive capacity of words or their musical value. The most instructive commentary on the emotional power of sound, as it was felt by the Greeks even in prose literature, is to be found in Dionysius of Halicarnassus, a critic and grammarian who lived at Rome in the Augustan age.² Many of his literary judgments are prejudiced and unprofitable, but of his fine perception of the harmonies of Greek speech we can entertain no reasonable doubt. In an essay entitled *On the Arrangement of Words*, that is little read even by scholars, he assumes that the ear demands nobility and charm in literary expression as truly as the eye does in a picture or a statue (c. x.). He holds that the magic of style depends less on the apt choice

¹ *Rhet.* iii. 3. 3. 1406 a 18 οὐ γὰρ ἡδύσματι χρῆται ἀλλ' ὡς ἐδέσματι τοῖς ἐπιθέτοις.

² On Dionysius as a literary critic see the valuable edition of *The Three Literary Letters* by W. Rhys Roberts (Cambridge Press 1901), pp. 1-49.

(ἐκλογῇ) of words than on the manner in which they are disposed (σύνθεσις) within the sentence. Alter their arrangement and you destroy the total effect : for arrangement is like the Homeric Athene, who can at will make Odysseus mendicant or warrior, mean or mighty (c. ii.-iv.). Taking the alphabet itself he examines the letters from the euphonic point of view (c. xiv.). Phonetics, it may be observed, never with the Greeks became an independent science. The inquiries made into the physiology of sound had all a bearing on the study of rhetoric, the object being simply to discover what sounds were beautiful or the reverse. Hence the link was a close one which united phonetics on the one hand with metric and music on the other ; and it lay within the domain of the musician rather than of the grammarian to classify the letters of the alphabet. True to this principle Dionysius, in estimating the elemental sounds, relies on the authority of Aristoxenus, the author of the famous treatise on music. He arranges the vowels in order of euphonic value : *a, η, ω, υ, ι*. Among the consonants, sigma is

a letter 'without grace or sweetness, and if too frequently employed becomes very painful. The sibilant sound seems characteristic of the voice of the brute rather than of rational man.'¹ Some poets, he adds, composed whole odes without a sigma;² and elsewhere we read of a *tour de force* of the kind attributed to Pindar.³

We cannot here follow Dionysius in his intricate distinctions of style. I would refer only to a single chapter in which he appears as the hierophant of a hidden art, one who is prepared to initiate us into the innermost secret of literature. He asks the question *How a prose work may resemble a beautiful poem*. The phrases with which he prefaces the inquiry are borrowed from the mysteries of Eleusis:

'These things indeed are of the nature of mysteries and not to be divulged to the vulgar.

¹ Dionys. Hal. *De Comp. Verb.* c. xiv. ἄχαρι δὲ καὶ ἀηδὲς τὸ σ, καὶ εἰ πλεονάσειε σφόδρα λυπεῖ. θηριώδους γὰρ καὶ ἀλόγου μᾶλλον ἢ λογικῆς ἐφάπτεσθαι δοκεῖ φωνῆς ὁ συριγμός.

² εἰσὶ δὲ οἱ ἀσίγμους ὧδ' ὅλας ἐποιοῦν.

³ Athen. x. 455 C.

It would, therefore, be no impertinence should I invite only the privileged few to be present at the holy rites of literature, and bid the profane close the gates of their ears. For some there are who in sheer ignorance make a mockery of things most serious.¹

He then expounds the doctrine of rhythmical prose, working on the text supplied by Aristotle's *Rhetoric*. Prose must be rhythmical but not metrical, poetical without being a poem, and melodious without being a lyric. Next he selects passages from Demosthenes, which he submits to a searching and minute analysis on the side of rhythm. Some of his distinctions, it must be owned, bear traces of the over-elaboration of the rhetorical schools. But we cannot dismiss his general criticism as unsound or fanciful. The whole history of the evolution of Greek prose, and the practice of the great

¹ Dionys. Hal. *De Comp. Verb.* c. xxv μυστηρίους μὲν οὖν ἔοικεν ἤδη ταῦτα, καὶ οὐκ εἰς πολλοὺς οἰά τέ ἐστιν ἐκφέρεσθαι. ὥστ' οὐκ ἂν εἴην φορτικός, εἰ παρακαλοῖην, οἷς θέμις ἐστίν, ἢ κειν ἐπὶ τὰς τελετὰς τοῦ λόγου, θύρας δ' ἐπίθεσθαι λέγοιμι ταῖς ἀκοαῖς τοὺς βεβήλους. εἰς γέλωτα γὰρ ἔνιοι λαμβάνουσι τὰ σπουδαίωτα δι' ἀπειρίαν.

masters of the art, support his main contention. The trained oratorical ear was acutely sensitive to euphonious combinations of sounds. No pains were spared that words might be linked together by easy and continuous articulation. Rough and clashing syllables were avoided, and even two vowels in consecutive words were seldom allowed to collide. We can trace, moreover, the stages by which the ample movement of the oratorical period was developed—how the clauses that follow one another in logical sequence and subordination, come to be linked together in a larger rhythmical structure. Recent critics following in the steps of Dionysius have attempted to define more accurately the rules of rhythm and harmony which govern the prose of Demosthenes. But such analysis, probably, can never be more than partially successful. The Demosthenic rhythm in its infinite variety refuses to adjust itself to any rigid framework. No one can fail to catch something of its manifold movement, its great rise and fall ; but its laws are as free as the emotion to which it responds. In

vain we seek an exact rhythmic correspondence between the members of a period or of successive periods. Rhythmic symmetry of a kind there surely is ; but the attempt to follow it out in minor details succeeds, too often, only by cutting up the period into artificial sections, without due regard to oral delivery or to the natural pauses of the voice.

The modern world has grown dull to the cadences of prose. We read of Greek and Roman audiences being painfully affected by inharmonious combinations of sound. There is probably no conceivable dissonance which would cause neuralgia to the unfastidious ears of a British audience. English is itself in truth a most difficult language to render musical. It is only when we venture to write it ourselves that we become aware how ugly it can be made, and wonder at the full harmonies that can be drawn out by one who knows all the tones of the instrument.

Now and then, by a rare chance, we are admitted to the confidence of a writer who has mastered the art. There is an article by

R. L. Stevenson on 'Style in Literature,'¹ which is a pretty precise modern parallel to the speculations of Dionysius. Stevenson, we may be sure, had never read Dionysius—probably had never heard of him. But his manner of treatment is curiously similar. 'Each phrase in literature,' says Stevenson, 'is built of sounds, as each phrase in music consists of notes. One sound suggests, echoes, demands and harmonizes with another; and the art of rightly using these concordances is the final art in literature.'² In bad writers 'you will find cacophony supreme, the rattle of incongruous consonants only relieved by the jaw-breaking hiatus, and whole phrases not to be articulated by the powers of man.' 'You may follow the adventures of a letter through any passage that has particularly pleased you; find it, perhaps, denied awhile to tantalize the ear; find it fired again at you in a whole broadside; or find it pass

¹ *Contemp. Rev.* 1885.

² Cp. Dionys. Hal. *De Comp. Verb.* c. xvi ὥστε πολλή ἀνάγκη καλὴν μὲν εἶναι λέξιν ἐν ᾗ καλὰ ἐστὶν ὀνόματα, καλῶν δὲ ὀνομάτων συλλαβὰς τε καὶ γράμματα καλὰ αἷτια εἶναι, ἡδεῖάν τε διάλεκτον ἐκ τῶν ἡδυνόντων τὴν ἀκοὴν γίνεσθαι.

into congenerous sounds, one liquid or labial melting away into another.' Instances he then gives from Milton's prose, from Shakespeare and Coleridge, tracking in each case the recurring letters. And as to the rhythm, he writes: 'Each phrase of each sentence, like an air or recitative in music, should be so artfully compounded out of longs and shorts, out of accented and unaccented syllables, as to gratify the sensual ear. And of this the ear is the sole judge.' He ends a long inquiry by observing: 'We begin to see now what an intricate affair is any perfect passage; how many faculties, whether of taste or pure reason, must be held upon the stretch to make it; and why when it is made, it should afford so complete a pleasure. . . . We need not wonder then if perfect sentences are rare, and perfect pages rarer.'

Fascinating, however, as are such disclosures of the inner mechanism of the craft, may we not feel confident that the method of production is one thing, and the method of analysis another; and that neither Demosthenes nor Milton—nor Stevenson himself at his best—

were solicitous to count their longs and shorts, or consciously played the game of hide-and-seek with the letters?

Let us now pass to the age of the Antonines—the second century of our era—and glance at the work of the one man of literary genius whom that age produced: an original writer, who had also many of the gifts of a great critic—Lucian, the Syrian, of Samosata. A pamphleteer by instinct, a light and airy spirit with an exuberant and poetic fancy, a sparkling irony, a singular freshness and delicacy of tone—of all his gifts his inimitable ease and naturalness of manner was perhaps the chief secret of his art. He had a native dislike for falsehood and insincerity in literature as in life. In an age of tasteless pedantry he stood out as a model of simplicity and unaffected good taste. The literary artists of the day—‘Sophists’ as they were called—were as a rule itinerant rhetoricians, whose business it was to handle any theme effectively at short notice, and execute variations upon it in brilliant and acrobatic manner. They had a pretty knack

of turning phrases ; but their ingenious conceits concealed an inner unreality and poverty of thought. Lucian set his face against the pretentiousness, the affectation, the hollow imposture which passed for art. His own literary criticism is occasional and unsystematic, conveyed for the most part in parody or lightly veiled irony ; but none the less it is original and genuine criticism.

In the pamphlet entitled *The Teacher of Orators* he lays down certain rules which may be thus summarised : First, bring to your subject ignorance and audacity, a stentorian voice, an exquisite toilette, and some fifteen or twenty old Attic words, which must be freely sprinkled as a garnishing to your discourse. They are always beautiful, even when they are nothing to the purpose.¹ Next, press forward, speak fluently, do not pause to think. Do not trouble to put things in their proper order. Thirdly—and above all—have a chorus of friends to

¹ *Rhet. Praec.* § 16 καθάπερ τι ἡδύσμα ἐπίταττε αὐτῶν. § 18 καὶ ἐπίπαστα τὰ ὀλίγα ἐκεῖνα ὀνόματα ἐπιπολαζέτω καὶ ἐπανθείτω . . . καλὰ γάρ ἐστι καὶ εἰκῇ λεγόμενα.

applaud you. We observe here the allusion to old Attic words. The love of archaic phrases, which had been one of the passing affectations of early prose, has now reappeared. Words were unearthed or 'dug up,'¹ no one knew whence, by persons who had never read the ancient writers, and who opened none but the newest books. The taste for archaisms and the craze for novelty generally go together in decadent minds.² In another satire, the *Lexiphanes*, Lucian administers a drastic medical treatment to a patient suffering from this fantastic disorder; and finally dismisses him with a little homily on literary education, which has in it the ring of real conviction. The closing words (§§ 23-24) are to this effect: 'Give up the quest for outlandish phrases; think first of the sense, then of the words.

¹ *Lexiph.* § 16 τοσούτου ἐσμὸν ἀτόπων καὶ διαστρόφων ὀνομάτων, ὧν τὰ μὲν αὐτὸς ἐποίησας, τὰ δὲ κατορωρυγμένα ποθὲν ἀνασπῶν κ.τ.λ.

² Cp. *De Subl.* c. v. τὸ περὶ τὰς νοήσεις καινόσπουδον, περὶ ὃ δὴ μάλιστα κορυβαντιῶσιν οἱ νῦν, 'that quest after novelty in thought which leads our folk of to-day so mad a dance' (Saintsbury, *Loci Critici*, p. 42).

Follow the ancient models instead of moulding yourself on the poorest productions of the latest sophist. Be not beguiled by the wind-flowers of speech (*αἱ ἀνεμῶναι τῶν λόγων*), but nourish your literary sense on the fortifying food of athletes.'

In Lucian's literary criticisms there is always a tacit reference to the great traditions of the past. One of the evils he discerned was that the various forms of literature were encroaching each on another's sphere; natural boundaries were being effaced and there was a confusion of kinds. The pervading influence of rhetoric more than any other single cause brought about this anarchy of taste. Rhetoric was the one educational discipline of the Roman empire and the passport to success in every walk of life. Indeed we find the word 'eloquentia' employed by Roman writers as the comprehensive term for every form of literary composition, grave and gay, prose and verse. Poetry slowly withered as rhetoric gained ground; and even literary critics in turn came to treat poetry from the point of

view of the rhetorical schools, till the question was seriously raised by a Roman writer, Annaeus Florus, of the second century A.D., whether Virgil was an orator or a poet.

Of all kinds of prose composition history suffered most from this subtle form of corruption. It was held to be a province of rhetoric; its special department was that of panegyric.¹ The subject to be chosen must be one that was flattering to national vanity and that admitted of skilful embellishment. The art of rhetorical amplification would find full scope in the fictitious speeches which had become a fixed tradition in historical writing. But history was at the same time menaced by the inroad of poetry.² It was the business of poetry to supply the engaging falsehood, to adorn the legends, to give an imaginative colouring to the digressions, and offer to the weary traveller pleasant resting-places by the

¹ Cp. Hermog. *De Ideis* p. 417. 28 πάντως δεῖ καὶ τοὺς ἱστοριογράφους ἐν τοῖς πανηγυρικοῖς τετάχθαι.

² Lucian *De Hist. Conscr.* § 8 ἀγνοεῖν εἰκόασιν οἱ τοιοῦτοι ὡς ποιητικῆς μὲν καὶ ποιημάτων ἄλλαι ὑποσχέσεις καὶ κανόνες ἴδιοι, ἱστορίας δὲ ἄλλοι.

way. Thus the danger which the Greeks surmounted in their vigorous prime, when prose began to advance along the lines of poetry, now, in a new form, assailed historical writers, both Greek and Roman.

In his pamphlet *How to write History* Lucian puts in a plea for accuracy and sobriety; he protests—as also did Polybius—against turning history into panegyric.¹ He ridicules the writers who affect a vulgarly picturesque style or one overloaded with descriptive detail (§§ 19-20). No less does he condemn that jumble of styles in which fine writing is interspersed with touches of slang—‘the buskin of tragedy on one foot, and a slipper on the other.’² He disallows the lawless poetic fancy by which history becomes ‘a sort of prosaic poetry.’³ His own

¹ *De Hist. Conscr.* § 7 (‘a great gulf is fixed’ between history and panegyric): ἀγνοοῦντες ὥς οὐ στενῶ τῷ ἰσθμῷ διώρισται καὶ διατετείχισται ἡ ἱστορία πρὸς τὸ ἐγκώμιον.

² *Ib.* § 22 ὥστε τὸ πρᾶγμα εἰκὸς εἶναι τραγωδῶ, τὸν ἕτερον μὲν πόδα ἐπ’ ἐμβάτου ὑψηλοῦ ἐπιβεβηκότι, θατέρῳ δὲ σάνδαλον ὑποδεδμενῶ.

³ *Ib.* § 8 ἡ ἱστορία δέ, ἣν τινα κολακεῖαν τοιαύτην προσλάβῃ, τί ἄλλο ἢ πέζῃ τις ποιητικὴ γίγνεται;

conception of what a historian ought to be is in marked contrast with the character of the historian of the day—his servility, his disregard of truth, his straining after dramatic effect. The historian should be ‘a free man, fearless, incorruptible, the friend of truth,’ ‘owning no country, no sovereign, no king’;¹ one who writes not for the praise of the hour but for all time to come.²

The triple alliance of history, poetry, and rhetoric injuriously affected, through the course of centuries, the historical tradition of Europe. In recent years a sharp reaction has set in against what is called the literary influence in history. The Muse of history is exhorted to cast aside her literary trappings and assume her severest aspect. She must make herself scientific. Under the æsthetic influence, Seeley urges, history becomes pictorial; the pictorial point of view is apt to overshadow the historical;

¹ *De Hist. Conscr.* § 41 ἄφοβος, ἀδέκαστος, ἐλεύθερος, παρησίας καὶ ἀληθείας φίλος, . . . ἴσος δικαστῆς εὖνους ἅπασιν, . . . ξένος ἐν τοῖς βιβλίοις, καὶ ἄπολις, αὐτόνομος, ἀβασίλευτος.

² *Ib.* § 61 μὴ πρὸς τὸ παρὸν μόνον ὁρῶν γράφει, . . . ἀλλὰ τοῦ σύμπαντος αἰῶνος ἐστοχασμένος.

a biographical interest is substituted for a political. Attention is concentrated on the mere externals of an event, on its scenic accessories, on all that is personal and dramatic and that invites literary handling. Whereas many of the most important events are confessedly dull reading, great political changes being brought about without pomp or glitter, the literary estimate falsifies the true proportions of things. The artistic historian rejects elements of serious interest in order to satisfy the taste for the picturesque.

Few will deny the solid truth that underlies this criticism. But we cannot lightly accept the suggestion that history should emancipate herself from literature. Seeley himself fortunately possessed so fine a literary gift as to be unable to carry out his own theory. But the summons has again been addressed to history—and in a more peremptory form—by the present holder of the chair at Cambridge, to quit her old associates and come out into a place of freedom.¹ In the view of this dis-

¹ *Inaugural Lecture*, J. B. Bury, Cambridge Press, 1903.

tinguished writer history is not, as for Seeley, limited to the mass of facts which form the material of political science. It embraces other groups of facts and is more comprehensive in its scope. Still for him too history is a science not an art; 'a science no less and no more'; in close relation with 'the sciences which deal objectively with the facts of the universe.' 'To clothe the story of a human society in a literary dress is no more the part of a historian as a historian, than it is the part of an astronomer as an astronomer to present in an artistic shape the story of the stars.'

Yet may we not urge that the form of a work must be mainly determined by the nature of the subject-matter? Human action cannot be told in just the terms applicable to cosmic processes. History is not merely the story of movements, of institutions, or of changes in the order of society. It is also the story of men, doing, feeling, thinking; acting as individuals, though within and in relation to the political organism. A purely scientific history could hardly touch the fringe

of the inward world of human motive and human personality. That world, with its reactions on the outer, can never be reduced to the certitude of scientific truth: its facts cannot be tested or authenticated by the methods which strict science recognises. They need some divining power, some faculty of imaginative interpretation to make them intelligible; and such a faculty demands the art of literary expression. Different periods, again, call for different kinds of writing. In describing scenes of stirring and dramatic interest it is right that the style should reflect the colour and movement of the time. Great deeds should be nobly told. There are other periods which carry within them the silent growth of institutions or the shaping of events still in the future. It is the part of the literary historian not to omit these less inspiring pages of history, but to relate them in a manner adapted to the subject. We are here within the proper region of literature.

‘What a pity it is,’ says Edward FitzGerald, ‘that only Lying Histories are readable.’ Would

not, however, the unreadable histories—divorced from the literary art and omitting many vital but non-scientific facts—be also to a large extent untrue? History, in short, would seem to be partly a science, and partly an art. It is a very human affair, this story of the past, and it must be so told that men will read it with sympathy and even with delight. Let us search the records, collate the manuscripts, investigate the sources, classify and collect the facts: yet all this is not yet history, but the materials of history—‘not tragedy,’ in Plato’s phrase, ‘but the preliminaries of tragedy.’¹ It remains for the writer of genius and imagination to fuse the elements, the outward and the inward facts, into an orderly whole. The antithesis between history and literary history is surely a false one. History rightly told is literature; but it is not therefore rhetorical, unreal, fantastic. We do not ask the historian to be ‘the epic poet or ballad writer in verse.’² We do say that he should be at once a literary

¹ Plat. *Phaedr.* 269 A τὰ πρὸ τραγῳδίας ἀλλ’ οὐ τὰ τραγικά.

² Seeley, *Introduction to Political Science*, p. 27.

man and a man of science. The task of writing literary history becomes indeed every day more difficult owing to specialised learning, the accumulation of materials, and the stricter standard of truth. To be a literary historian will probably be a rare achievement in the future. But the ideal should not on that account be lowered. What is needed is, not that history should cease to be literary, but that it should be literary in a higher than the ordinary sense; the style should be more flexible and sensitive; ready obediently to follow the thought, and delicately responsive to the nature of the subject-matter. When one considers how various that subject-matter is, it will be seen that no literary demand could well be more exacting. I am not sure that the historical scientists would, if they were pressed, reject some such literary ideal. But, in any case, history severed from literature loses her place and power in the world. Her productions become ephemeral; each fresh fact that is discovered loosens their precarious hold on life.

Looking back on the general course of Greek criticism we can see that not a few of its defects may be traced to the fact that the Greeks knew no literature but their own. In the region of literary production they were probably the gainers for being thrown upon their own resources. Their literature must otherwise have lost some of that incomparable freshness which distinguishes it from the other literatures of Europe. It could not have evolved itself on the same natural lines and in such close relation to the organic life of society. But the province of criticism is one of observation and comparison, and a wider comparison would have brought with it an enlarged comprehension. The chief danger, perhaps, which besets a critic is that of attempting to restrict the rights of genius by framing arbitrary canons of literary uniformity. Even Aristotle in the *Poetics* is not free from the failing; and it may perhaps be questioned whether the highest literary criticism is possible without a knowledge of at least one foreign literature. In the critical appreciation of our

own literature no first-rate work was produced till the way had been prepared by the study of Greek and Latin masterpieces. Characteristics long familiar became significant only when light was first flashed on them from the study of antiquity. A lesson even in comparative politics may have a salutary influence on the literary art. In the expiring days of Greece Rome opened up larger horizons to writers who had hitherto been brought up in the seclusion of libraries or in rhetorical schools. The stirrings of political life were now again felt. The *History* of Polybius was one result of this outlook into a wider world. Greek criticism too had showed signs of renewed vitality; and the return to a sounder taste in the Augustan age is noted by Dionysius of Halicarnassus as due to the invigorating contact of Rome.¹

It was the confluence of these two civilisations that led to the comparative study of literature in however rudimentary a form. The early experiments were not altogether felicitous.

¹ *De Antiq. Orat.* proem. c. 3.

A habit arose of drawing artificial comparisons between Greek and Roman authors. Ennius answered to Homer, Afranius to Menander, Sallust to Thucydides, Livy to Herodotus. Still more remote are the analogies suggested by Plutarch's *Parallel Lives*. None the less the method was a true one, and needed only riper knowledge and judgment to become fruitful in results. The first Greek critic who employed it to any purpose is the author of the treatise *On the Sublime*. He has the unique distinction of drawing his illustrations from three literatures,—not only from the Greek and Latin classics, but also, in one passage, from the Jewish Scriptures (*Gen.* i. 3).¹

In another respect the same writer approaches to our modern point of view. He thinks of literature not merely as a product of the individual mind, but as an expression of national life. Certain conditions are necessary to produce great thinking and great speaking.

¹ *De Subl.* c. ix. 9 ταύτη καὶ ὁ τῶν Ἰουδαίων θεσμοθέτης, οὐχ ὁ τυχῶν ἀνὴρ, . . . εὐθὺς ἐν τῇ εἰσβολῇ γράψας τῶν νόμων “εἶπεν ὁ Θεός” φησί· τί; “γενέσθω φῶς, καὶ ἐγένετο; γενέσθω γῆ, καὶ ἐγένετο.”

It is not enough that the author should have the natural gift of beautiful speech, or that he should have been trained to emulate the great models of antiquity. An atmosphere is needed, a fitting social environment to call forth his powers. True as it is that elevation of style is 'the far-heard echo of nobility of soul,'¹ yet noble faculties may be starved for want of moral sustenance. What, he asks, are the causes for the decline of eloquence? for the 'great and world-wide dearth of high utterance that attends our age'?² Two causes he assigns, both of them rooted in social conditions. First, the decay of liberty. 'We seem to have learnt from infancy that subserviency is the law of life, being from our tenderest years of thought all but swaddled in its manners and customs, and having never tasted that most beautiful and fertile fountain of eloquence, Freedom—so that we turn out merely sublime in Courtiership.'³ Next, 'the

love of money and the love of pleasure carry us away into bondage, or rather, as one may say, drown us body and soul in the depths, the love of money causing meanness, and the love of pleasure being the ignoblest of all diseases.' No previous Greek critic, not even Aristotle, had noted the moral atmosphere, the social ideals of an age, as a main factor in the creation of noble works of literature. The only other ancient writer who lays any stress on this topic—now so trite—is Tacitus in the remarkable dialogue *De Oratoribus*.

The inadequate perception of the correspondence between a writer and his age is closely related to what was perhaps the most persistent defect of ancient criticism—a want of historic imagination, of a faculty for apprehending the whole environment of a bygone time. The critic, as we now understand his office, is an interpreter between the present and the past; he must be imbued with the historic no less than with the literary spirit. Yet it has taken centuries for this idea to be established. It is foreshadowed in Bacon, who in sketching

the principles on which a critical history of literature should be composed, says that the writer should 'evoke from the dead as by a sort of spell the literary genius of the age.'¹ Not until recent years has either Greek or English literature been handled in this spirit. Criticism so practised becomes an art of constructive imagination.

Nor must we forget that the critic's office is not completely summed up in the word 'interpretation.' He must needs form a judgment. He cannot renounce this his original function. If there is such a thing as a standard of excellence and a tribunal of criticism, the decisions of that tribunal will admit of intelligent exposition. 'A judgment,' however, 'on literature is'—once more to quote Longinus—'the final aftergrowth of much endeavour';² and the critic is aware that the ultimate appeal is to Time—to the many not to the few, to the consentient opinion of

¹ *De Augm. Scient.* B. ii. c. iv. 'ut genius illius temporis litterarius veluti incantatione quadam a mortuis evocetur.'

² *De Subl.* c. vi ἡ γὰρ τῶν λόγων κρίσις πολλῆς ἐστὶ πείρας τελευταῖον ἐπιγέννημα (Trans. Saintsbury).

educated mankind. This principle of *Quod semper quod ubique* in literature is first enunciated in the treatise *On the Sublime* :

‘If then any work on being repeatedly submitted to the judgment of an acute and cultivated critic, fails to dispose his mind to lofty ideas ; if it does not leave in the mind more food for reflection than the words seem to convey ; and if, the longer you read it, the less you think of it, there can be here no true sublimity, when the effect is not sustained beyond the mere act of perusal. But when a passage is pregnant in suggestion, when it is hard, nay, impossible to distract the attention from it, and when it takes a strong and lasting hold on the memory, then we may be sure that we have lighted on the true Sublime. In general we may regard those words as truly noble and sublime which please all and please always. For when the same book produces the same impression on all who read it, whatever be the difference in their pursuits, their manner of life, their aspirations, their ages, or their language, such a harmony of opposites

gives irresistible authority to their favourable verdict.'¹

This consentient verdict of the ages Greece has gained. In the *Hymn to the Delian Apollo* you may remember the description of the Ionians assembled at their festival: 'Whosoever should meet them at that gathering would deem that they were exempt from death and age for ever, beholding their gracious beauty and rejoicing in heart at the sight of the men and the deep-girdled women.'² What is here said of the Ionians applies with literal truth to the gracious creations of Greek literature—'deathless they are and ageless for ever.' They are embalmed in writings which possess the greatest of all anti-septic qualities, the quality of style;—and there lies the answer to the question so often asked: Why can we not be content to read Greek literature in translations?

Style and thought perfectly blended—it is thus that Pindar's saying comes true: 'The word

¹ *De Subl.* c. vii. 3-4 (Trans. H. L. Havell Macmillan and Co. 1890).

² *Hymn to Delian Apollo*, 151-154.

lives longer than the deeds.’¹ And it is herein precisely that the Greeks stand out as the models of the true literary spirit. They show us that he who would worthily pursue the calling of letters should attempt to rise above a purely mechanical skill ; that, however lowly may be the material in which he works, he must do so in the spirit of the artist, not of the artisan. There is of course a weak side to literary æstheticism. In *Don Quixote* we read of a certain author who was renowned for ‘the brilliancy of his prose and the beautiful perplexity of his expression.’ We seem to know the type. Let the phrase be but beautiful and rhythmical, musical and flowing, and it matters not if the fine words conceal emptiness beneath. A literary æsthete was described by Lucian as ‘a strange phantom fed upon dew or ambrosia.’² Him too we know. His home is not upon the

solid earth. He sings and soars, he loves and laments, he knows not what or why ; harmonious and meaningless is his song. The cult of the meaningless is from time to time in the ascendent. Once at an exhibition of pictures I stood in wonder before a certain portrait. I begged a friend who was initiated into the principles of the school to explain it. The reply was : ' Think away the head and the face and you have a residuum of pure colour.' Whether this doctrine is to be accepted in painting, and more particularly in portrait-painting, I do not know ; but in literature at least it means sure decay. Think away the meaning, get rid of the thought, and you have beautiful and pure form. No,—form is essential, but not form without substance. The supreme merit of the Greeks is that, on the one hand, they felt and showed that beauty is of the essence of literature, and that a formless work of literature is in truth a misnomer, being dead while yet it lives : it may have philosophic, it may have scientific merit, but it will be superseded : what is in it of value will be incorporated with other works : its sub-

stance is separable from its form. On the other hand, Greek example reminds us that beauty of form is not all. The literary writer, whether in prose or verse, is not a maker of fine phrases, a singer in the void. The Greek poet had something to say, and was not merely concerned how he said it. He was in close contact with realities. He drew his sustenance from the soil of human nature. He touched the springs of national life. Even the idiom of the people he so used as to ennoble it. It is the glory of Greek literature that of all literatures it is at once the most artistic and the most popular. And our hope, our best hope, for the literature of the future is, that as the democratic movement extends and calls forth enlarged intellectual sympathies, the old Hellenic harmony may be re-established between that eternal love of beauty on which all art and literature rest, and that love of scientific truth which is the dominant mark of our own age.

SOME ASPECTS OF THE GREEK GENIUS

THE OXFORD MAGAZINE.—"The whole volume is delightfully fresh and readable; nor can any reader lay it down without a cordial appreciation of the style as well as the matter of the writer—the real value of his judgments, and the graceful touch which gives life and movement and charm to all he has to say."

THE CLASSICAL REVIEW.—"He is extremely lucid and he writes with a command of graceful language not always given to scholars."

THE ST. JAMES'S GAZETTE.—"Professor Butcher writes so fluently and brightly, that in reading these essays we are in danger of overlooking his solid attainments and accurate scholarship."

THE GLOBE.—"Popular at once in treatment and in style, and calculated, therefore, first to attract and then to retain the attention of a large number of the public. . . . Professor Butcher writes a clear and limpid style, his criticism is eminently fair and candid, and his book, as a whole, is as informing and suggestive as it is readable."

Fourth Edition. 8vo. 12s. 6d. net.

ARISTOTLE'S THEORY OF POETRY AND FINE ART

WITH A CRITICAL TEXT
AND TRANSLATION OF THE POETICS

PILOT.—"When Professor Butcher's first edition appeared in 1895 it at once took its place among the few really important contributions to classical learning which the last years of the nineteenth century witnessed. . . . We are glad to be able to infer from the rapid sale of the first and second editions that the public appreciate the boon which Professor Butcher has conferred upon them."

OXFORD MAGAZINE.—"By far the best translation of the *Poetics* that has yet appeared, and one which will render the treatise thoroughly accessible in a reliable and most readable form to all literary students, whether they are Greek scholars or not."

MACMILLAN AND CO., LTD., LONDON.

BY THE SAME AUTHOR.

Fourth Edition, revised. 8vo. 4s. 6d. net.

THE
POETICS OF ARISTOTLE

EDITED, WITH CRITICAL NOTES
AND A TRANSLATION

PROFESSOR COURTHOPE, in a lecture at Oxford on "Aristotle," said of Professor Butcher's book that Aristotle's meaning was expounded in it with such beauty and clearness that the treatise might now be studied with advantage by the cleverer boys in every public school.

Fcap. 8vo. 1s. 6d.

DEMOSTHENES

[*Classical Writers.*

SATURDAY REVIEW.—"It is perhaps superfluous to say that Mr. Butcher's work is well done."

PALL MALL GAZETTE.—"There is probably no better statement of the political situation of Greece and Macedon, and no better exposition of the character, aims, and style of Demosthenes to be found in English."

ATHENÆUM.—"... excellent work is most pleasant reading. The criticism is admirable throughout."

Crown 8vo. 7s. 6d. net.

THE
ODYSSEY OF HOMER

DONE INTO ENGLISH PROSE

BY S. H. BUTCHER, D.LITT., LL.D.

AND

A. LANG, M.A.

SATURDAY REVIEW.—"The present brilliant translation of the *Odyssey* is another most gratifying proof of the taste and soundness of English scholarship. . . . The brilliant and exact scholarship of Mr. Butcher is happily combined with Mr. Lang's wide knowledge of the early poetry of different peoples. The translation is good for all readers."

PALL MALL GAZETTE.—"... may be heartily congratulated on the success of their attempt. They have produced a work which will not only be appreciated by scholars, but will reproduce for those who are unable to read Homer in the original an unusually large measure of the Homeric power and charm."
